Le murature nell'architettura del versante meridionale del Gran Sasso (secc.XI - XIV)

2012-10-11T00:00:00+02:00 Stefano Brusaporci
Le murature nell'architettura del versante meridionale del Gran Sasso, impiegate tra l'XI ed il XIV secolo, sono studiate al fine di comprenderne le qualità costruttive ed architettoniche. L'ambito temporale prescelto è riferito al formarsi ed al consolidarsi di larga parte dell'attuale sistema insediativo, caratterizzato da importanti testimonianze sia dal punto di vista costruttivo che figurativo. Il percorso di ricerca ha comportato un'indagine condotta direttamente sul documento materiale dell'edificio, quasi sempre l'unico disponibile, e su un elevato numero di episodi architettonici. I valori testimoniali si accompagnano a quelli figurativi e concorrono alla definizione dei caratteri formali dell'architettura, cosicché il materiale, la morfologia, la finitura, la tessitura conducono ad una differente percezione

dell'immagine complessiva. Il saggio si articola in tre capitoli. Il primo descrive il contesto territoriale ed insediativo cui le architetture appartengono. Il secondo presenta un repertorio delle murature medievali dell'ambito di studio. Il terzo tratta dei caratteri costruttivi delle murature ed introduce una proposta di classificazione accompagnata da riflessioni di sintesi mensiocronologica e tipocronologica.

Ricerca tecnologica per progettare nel contesto post-industriale

2012-09-13T00:00:00+02:00 Aa.Vv. L'unificare il momento produttivo e l'innovazione inventiva, quale passaggio dal pratico al suggestivo, non può ridursi alla sola applicazione delle tecniche convenzionali: la progettazione presuppone una tecnica che si realizza mettendo in scena l'immaginario e rendendo comunicanti e non sovrapposte le esperienze culturali e progettuali provenienti dai più diversi campi". Alfabeti del disegno

2013-07-30T00:00:00+02:00 Vinicio Bonometto
Questo libro è un piccolo viaggio nel vasto mondo della rappresentazione, con un desiderio e una convinzione. Il desiderio è quello impossibile d'abbracciarne l'intero panorama: dal disegno fatto a mano, alle tecniche del bidimensionale, sino alle nuove frontiere della visione tridimensionale. La convinzione è che sul disegno bisogna lavorare tanto, guardare molto e anche copiare. La sostanza del prodotto disegnato necessita ancora di tanta esperienza e il segno ha sempre bisogno di cura e spessore. Il disegno del progetto architettonico e urbano deve avere dentro di sé anche un parallelo progetto grafico fatto di convenzioni e di contenute "invenzioni".

In-discipline. Dialoghi sul patrimonio culturale

2023-05-24 Elisabetta Pallottino Il volume presenta gli atti di un ciclo di incontri rivolto agli studenti dell'ultimo anno delle lauree magistrali in Architettura-Progettazione Architettonica e Architettura-Restauro del Dipartimento di Architettura di Roma Tre, organizzato dai corsi congiunti di Progetto del restauro architettonico e Laboratorio di restauro del patrimonio architettonico (docenti Michele Beccu, Elisabetta Pallottino, Paola Porretta, Francesca Romana Stabile, con la collaborazione di Cecilia Cicconi e Sara D'Abate). Le conferenze, che si sono svolte dal 2016 al 2021, sono state pensate per mettere a confronto diversi temi legati alla cultura e al progetto del patrimonio negli ambiti della storia dell'architettura e dell'ingegneria, del restauro, della progettazione architettonica e dell'arte visiva, della museografia, dell'archeologia e degli studi sul paesaggio consolidato. I saggi sono stati selezionati anche con l'intento di mettere in evidenza le potenzialità di un rapporto cogente tra progettazione e lettura del contesto storico (culturale, insediativo, formale, costruttivo). Agli studenti sono state presentate strade diverse di conoscenza e di riconoscimento valoriale perché possano imparare a muoversi in diversi ambiti metodologici, e a individuare competenze puntuali ed esperienze plurali. Antonio Piva

2015-10-22T00:00:00+02:00 AA. VV. La lunga e intensa attività di Antonio Piva, architetto e docente universitario, documenta un saldo e costante impegno intellettuale sul progetto di architettura, affrontato con sensibilità, misura e senso di responsabilità. In base a un'idea di ragione e di progresso non riducibile a soluzioni autoreferenziali, la sua azione si confronta con le condizioni e le molteplici mediazioni del contesto, introducendo lo stimolo di argomentazioni teoriche innovative come risorse

per il progetto. L'attenzione di Piva ai riferimenti della contemporaneità traccia un nuovo indirizzo della cultura del progetto nella "Scuola milanese": l'inserimento dell'atto progettuale alla scala architettonica nel quadro interpretativo dell'attualità, come riflesso delle trasformazioni culturali e sociali. Instancabile organizzatore di eventi nella Facoltà di Architettura di Milano, Antonio Piva può essere definito un vero e proprio operatore culturale che ha aperto il progetto ai grandi temi dell'architettura: la città multietnica, la rete musei-territorio, il rapporto giardino paesaggio, gli archivi di architettura, le relazioni tra architettura e politica. La ricerca dell'integrazione multidisciplinare, praticata nella professione e nella didattica, e la fedeltà costruttiva all'eredità di Franco Albini e Franca Helg sono ulteriori fattori identificativi che fanno emergere la sua figura di architetto protagonista della cultura della seconda metà del XX secolo. Il suo campo di applicazione si avvale di un particolare interesse per la valorizzazione delle preesistenze architettoniche e il progetto del museo, come declinazione specifica del rinnovamento degli spazi per la cultura. Le potenzialità strategiche dell'atto trasformativo del progetto sono messe al servizio di un'interpretazione rivolta al futuro e al senso etico delle decisioni che, in Piva, si delineano in risposte spaziali e formali misurate e "ragionevoli", in rapporto alle risorse offerte dalla realtà. Realtà, nella professione e nell'insegnamento, significa per Piva assumere progettuale casi concreti, prendere coscienza delle risorse disponibili (spaziali e aspatiali), aprirsi ai messaggi e alle istanze della società che cambia e avere un ruolo propositivo nei margini di una fattibilità che, avvalendosi della tecnica e di verifiche alla scala di dettaglio, tende a raccordare tradizione e innovazione.

Acupuncture prevents and treats diseases by inserting very fine needles into the skin specifically at the anatomic points of the body.

The principle behind this concept is that illnesses occur because there is an imbalance in your life force otherwise known as Qi. The Best percorsi di composizione architettonica appunti di metodo:The profit & loss of a certain company is determined by finance professionals through accounting. They can determine what created the profits as well as the losses. Accountants form some sort of business equation so justify the profits & losses of a business. By doing so, they can easily tell a company's net worth.

It seems that by simply starting to define one accounting term, it eventually leads to defining other terms as well. Net worth is another term that is quite difficult to understand. It refers to the resulting amount after deducting the liabilities of a company from the assets. Private companies refer to net worth as owner's equity.

Why owner's equity? Well, after deducting all the liabilities, what's left basically belongs to the owner. In the case of public companies, the profit of the business is returned as dividends to shareholders. As you can see, before owner or shareholders of a company can take hold of the profits, all liabilities must be deducted first.

The history of acupuncture is first discussed in an ancient Chinese medical text called the "Huang Di Nei Jing" or The Yellow Emperors Classic of Internal Medicine.

But there have been a few who are skeptic as archaeologists have found a 5,000 year old mummy in the Alps with similar acupuncture points in the body. This gives some people the idea that it was used even before the Chinese did but sine there is no written text to prove that, no one is certain and credit to this ancient practice goes back to the Chinese.

In the 6th century, this knowledge moved to Japan. In the 17th century, a man by the name of Waichi Sugiyama wanted to make this procedure painless for the patient so he developed the insertion tube, a small cylindrical tube through which the needle is inserted. Believe it or not, this technique is still being used today.

Instruments

Modern acupuncturists nowadays use disposable fine stainless steel needles that are 0.007 to 0.020 inches in diameter which are sterilized with either ethylene oxide or by autoclave. Since they are way finer than hypodermic syringe needles, being poked by these needles are relatively painless. The upper third of the needle is covered with either a thicker bronze wire or plastic to make the needle sturdier and easier to handle. The length of the needle and how far they are inserted is all up to the acupuncturist and his practised style of acupuncture.

Example Of Treatment

If a patient has a headache, he/she is diagnosed and is treated by stimulating the sensitive points located at the webs between the thumbs and palms. In acupuncture theory, these points are connected to the face and head and can be used for treatment of headaches and other ailments involved. Needles are then carefully inserted into the skin until the patient feels a twinge, which is usually accompanied by a slight involuntary twitching of the area. During this treatment, a number of things may occur.

- Sensitivity to pain in where needles are inserted.
- A hint of nausea during treatment in case of bad headaches.
- Near-immediate headache relief.

Insulin is a hormone produced by the body in order to get energy by converting starches, sugar and other items. Diabetes is a serious chronic disease and should be handled at proper time; otherwise it can create serious problems. It can pose a risk and can damage parts of the human body such as eyes, teeth, gums, blood vessels, nerves, and kidneys. High blood pressure is a condition where the blood pressure is more than normal. It is also known as hypertension. Heart pumps out blood, so that oxygen can reach to different parts of the body via blood. The pressure with which heart pumps blood is known as blood pressure. The blood pressure comprises of two measures, the systolic pressure and diastolic pressure. Systolic pressure is the larger figure and represents the pressure within the artery of the heart, when contractions take place which pump blood to different parts of the body. Diastolic pressure is the pressure within the artery of the heart, when the blood is filling in the heart and it is at rest. Both the pressures are measured in millimeters of mercury or mmHg. High blood pressure is abnormal increase in systolic pressure or diastole pressure.

Blood pressure is measured by putting a blood pressure cuff on the arm and placing a stethoscope on the chest. There can be very little variation in blood pressure depending upon the time, emotional moods, age, gender, weight, height, physical activity, stress and other illness such as heart disease and kidney disease. Children and adolescents become anxious when they visit the doctor. This is also an important factor which affects the blood pressure and the readings taken get tampered because of it. That is the reason why many blood pressure readings are taken in order to determine whether the adolescent has high blood pressure or not. The nurse may even ask the adolescent to calm down while taken the readings. Time gap is given between each reading, so as to give time to the adolescent to calm down. Emotions can also affect the blood pressure reading.

Another positive effect of this alternative therapy is increased pain control. During a session, a patient will usually feel very minimal pain as the thin needles are being inserted gradually. However, the needles are deliberately placed in varying depths, depending on the health requirements of the patient. When the needles reach the right depth, the patient will feel deeper pain, although the entire procedure is not necessarily painful.

Anemia in Adolescents

To understand what is anemia one should begin with breathing. The oxygen that is inhaled simply

doesn't stop in lungs. It circulates though out the body and fuels the brains also. Oxygen travels to all parts of the body though bloodstream and to be precise in the RBCs I.e. red blood cells. Now, these RBCs are produced in the bone marrow of the body and they serve as boats carrying oxygen in the bloodstream. RBCs have something called hemoglobin, a protein which holds oxygen. To make adequate hemoglobin body requires iron in plenty. The iron is supplied by the foods that we take along with other nutrients. When these RBCs are fewer in number than what is needed anemia occurs in the body. There can be 3 primary reasons: RBCs are lost due to some reason, the production of RBCs is slower than what is needed and lastly the body is destroying the RBCs. Different types of anemia are linked to at least one of these causes.

But in cases where considerable amount of blood flows in small amount of time as a result of an injury due to a serious example for instance, it may not be possible for bone marrow to replace RBCs so quickly resulting in anemia. Also, losing small amounts of blood over long periods of time may also lead to anemia. Example of this situation can be seen in girls who get heavy periods attributed mainly to deficiency of iron in the diet.

Anemia due to iron deficiency is the most common kind of anemia in the United States. It occurs mainly due to lack of iron in a person's diet. A teen with iron deficiency would have lower hemoglobin production and consequently lower RBCs. When the production of RBCs is low the person is regarded as anemic. The signs of anemia are paleness and tiredness. There can be other reasons as to why

enough RBCs are not produced in the body. Folic acid and Vitamin B-12 are also essential to produce RBCs. Getting these in adequate quantities is this important too. There can be a problem with bone marrow's working too resulting in anemia.

Hemolytic anemia occurs when a person has RBCs whose lifespan is shorter. The bone marrow may not be able to produce new blood cells if the blood cells die too early. This can result due to many reasons including person having disorders like sphenocytosis or sickle cell anemia. In some cases the immune system of the body may itself destroy the RBCs. In some cases certain antibodies can form in the blood as a result of reaction to certain drugs or infections and may attack the RBCs.

Acupuncture in the Western World

One of the most debated issues between the East and the West is the use of acupuncture as a western means of medical treatment. Even though this form of medicine has been used as an effective method for over five thousand years in China, there is no concrete evidence from scientific research studies that have proven the healing properties of acupuncture.

Skeptics shrug off the positive effects of acupuncture as merely placebo effects. Believers in acupuncture, however, say that the benefits have simply not yet been proven. Believers promote that the treatment is harmless and can be used as a complement to western medicine.

The Skinny on Acupuncture Weight Loss

It has been found that weight gain is directly related to emotions. Other than physical hunger, people reach for a huge chocolate bar or a big platter of burger and fries because of the sense of comfort derived from food and eating. More often than not, excessive weight gain is an emotional issue, rather than a mere physical one. You may not realize it, but you tend to take in more food whenever you're stressed, upset, or pressured.

In Acupuncture, there are specific spots on the body being targeted by the hair-like needles. These spots are linked to certain areas in the body and by stimulating these spots; the patient will achieve a greater sense of inner balance. As these points are inserted by the needles, certain hormones are released throughout the body. These substances work by helping you manage hunger and efficiently control the impulse to overeat.
