Created by Lloyd M. Dunn and Douglas M. Dunn, the test is made to measure vocabulary comprehension for American English. It is quick and effortless to administer, preserving valuable time so that attention can be placed on executing intelligent interventions.

The PPVT-4 evaluation subject matter encompasses a broad scope of receptive vocabulary levels, extending from preschool through adult age. The test items broadly include words that portray 20 subject fields (e.g., actions, vegetables, tools), speech parts (nouns, verbs, attributes), and home and school vocabulary.

The evaluation gives two equivalent versions which contain various vocabulary terms, ensuring that the person has not "memorized" the assessment. One edition can be used prior to intervention implementation to assess test-takers' vocabulary understanding and the second form can be utilized for re-testing to measure and note progress. The PPVT-4 also includes a special Growth Scale Value (GSV) which is reactive to slight changes over time.
