Forensic Anthropology and Medicine
2007-11-09 Aurore Schmitt Recent political, religious, ethnic, and racial conflicts, as well as mass disasters, have significantly helped to bring to light the most unknown discipline of forensic anthropology. This science has become particularly useful to forensic pathologists because it aids in solving various puzzles, such as identifying victims and documenting crimes. On topics such as mass disasters and crimes against humanity, teamwork between forensic pathologists and forensic anthropologists has significantly increased over the few last years. This relationship has also improved the study of routine cases in local medicolegal institutes. When human remains are badly decomposed, partially skeletonized, and/or burned, it is particularly useful for the forensic pathologist to be assisted by a forensic anthropologist. It is not a one-way situation: when the forensic anthropologist deals with skeletonized bodies that have some kind of soft tissue, the advice of a forensic pathologist would be welcome. Forensic anthropology is a subspecialty/field of physical anthropology. Most of the background on skeletal biology was gathered on the basis of skeletal remains from past populations. Physical anthropologists then developed an indisputable “know-how”; nevertheless, one must keep in mind that looking for a missing person or checking an assumed identity is quite a different matter. Pieces of information needed by forensic anthropologists require a higher level of reliability and accuracy than those granted in a general archaeological context. To achieve a positive identification, findings have to match with evidence, particularly when genetic identification is not possible.

Juvenile Osteology

2010-07-28 Louise Scheuer The need for a laboratory and field manual to assist with the evaluation of juvenile skeletal material is long overdue. This resource is essential for the practising osteoarchaeologist and forensic anthropologist who requires a quick, reliable and easy-to-use reference to aid in the identification, siding and aging of juvenile osseous material. While excellent reference books on juvenile osteology are currently available, no pre-existing source adequately fills this particular niche in the market. This field manual is designed with practicality as its primary directive. Descriptions of each bone contain 1) morphological characteristics useful for identification, 2) other elements with which the bone may be confused, 2) tips for siding, 3) illustrations of varying developmental phases, 4) data useful for ageing, and 5) a summary of developmental timings. Concise, bullet-style descriptions assist with quick retrieval of information. Unique to this manual is the presentation of data collected from a variety of populations, utilizing a range of observational methods, as an alternative to providing one overall aging summary that is derived from a compilation of many individual sources. This manual provides a host of data on a variety of populations to enable the user to select the reference most applicable to their needs. The final chapter combines information from each bone to provide a summary of developmental changes occurring at different life stages to act as an immediate ‘ready reckoner’ for the knowledgeable practitioner. It also provides forms useful for documenting juvenile material and diagrams to help with the recognition of commingled juvenile remains. The manual is a must for anyone responsible for the evaluation of juvenile osseous material through dry bone assessment, radiographs, sonograms, and or CT scans. *Identifies every component of the developing skeleton *Provides detailed analysis of juvenile skeletal remains and the development of bone as a tissue *Summarizes key morphological stages in the development of every bone *Provides data on a variety of populations to enable the user to select the reference most applicable to their needs *Focuses on practicality, with direct, bullet style descriptions *Provides forms for documenting juvenile material *Provides diagrams to help with the recognition of commingled juvenile remains *Final chapter provides summary of developmental changes occurring at different life stages to act as an immediate ‘ready reckoner’ for the practitioner

The Juvenile Skeleton

2004-04-02 Louise Scheuer The identification of even the smallest human fetal bone can be vital to the success of a criminal investigation or to the identification of the deceased. This book examines every bone in the human body from its earliest embryological stage through to maturity and is profusely illustrated with superb bone drawings at every stage of development. The ability to identify every component of the developing skeleton is of core relevance not only to the forensic profession but also to clinicians, skeletal biologists and physical anthropologists. Identifies every component of the developing skeleton Provides detailed analysis of juvenile skeletal remains and the development of bone as a tissue Summarizes key morphological stages in the development of every bone

Human Osteology

2000-01-04 Margaret Cox This advanced textbook provides the reader with an up-to-date account of recent developments and future potential in the study of human skeletons from both an archaeological and forensic context. It is well-illustrated, comprehensive in its coverage and is divided into six sections for ease of reference, encompassing such areas as palaeodemography, juvenile health and growth, disease and trauma, normal skeletal variation, biochemical and microscopic analyses and facial reconstruction. Each chapter is written by a recognised specialist in the field, and includes in-depth discussion of the reliability of methods, with appropriate references, and current and future research directions. It is essential reading for all students undertaking osteology as part of their studies and will also prove a valuable reference for forensic scientists, both in the field and the laboratory.

Craniofacial Identification

The Bioarchaeology of Children

2007 Mary E. Lewis Publisher Description

Developmental Juvenile Osteology

2016-07-26 Craig Cunningham Developmental Juvenile Osteology was created as a core reference text to document the development of the entire human skeleton from early embryonic life to adulthood. In the period since its first publication there has been a resurgence of interest in the developing skeleton, and the second edition of Developmental Juvenile Osteology incorporates much of the key literature that has been published in the intervening time. The main core of the text persists by describing each individual component of the human skeleton from its embryological origin through to its final adult form. This systematic approach has been shown to assist the processes of both identification and age estimation and acts as a core source for the basic understanding of normal human skeletal development. In addition to this core, new sections have been added where there have been significant advances in the field. Identifies every component of the juvenile skeleton, by providing a detailed analysis of development and ageing and a detailed description of each bone in four ways: adult bone, early development, ossification and practical notes New chapters and updated sections covering the dentition, age estimation in the living and bone histology An updated bibliography documenting the research literature that has contributed to the field over the past15 years since the publication of the first edition Heavily illustrated, including new additions

The Osteology of Infants and Children

2005-07-27 Brenda J. Baker Most archaeologists and bioarchaeologists receive little or no training in the recognition of skeletal remains of fetuses, infants, and children. Yet many research sites may contain such materials. Without a framework for identifying the bones or the excavation techniques suited to their recovery, archaeologists may often overlook subadult skeletal remains or even confuse them with animal bones. The Osteology of Infants and Children fills the need for a field and lab manual on this important topic and provides a supplemental textbook for human osteology courses. Focusing on juvenile skeletons, their recovery and identification, and siding in both field and lab settings, the volume provides basic descriptions and careful illustrations of each skeletal element at varying stages of development, along with sections on differentiation from other bones and siding tips. The book offers detailed treatment of the skull and teeth, including the cranial vault and facial bones, and examines the infracranial skeleton: vertebrae, pelvis, chest, shoulders, arms, hands, legs, and feet. A quick reference guide explains age estimation and identification templates. The illustrations are enhanced by photographs from two recent archaeology projects in Egypt, at Abydos and Dakhleh Oasis. The extensive collection of fetal and child remains from these sites provides new reference material unavailable in previous publications, making this manual an unparalleled resource in the field of physical anthropology.

Forensic Science and Humanitarian Action

2020-01-22 Roberto C. Parra Widens traditional concepts of forensic science to include humanitarian, social, and cultural aspects Using the preservation of the dignity of the deceased as its foundation, Forensic Science and Humanitarian Action: Interacting with the Dead and the Living is a unique examination of the applications of humanitarian forensic science. Spanning two comprehensive volumes, the text is sufficiently detailed for forensic practitioners, yet accessible enough for non-specialists, and discusses both the latest technologies and real-world interactions. Arranged into five sections, this book addresses the ‘management of the dead’ across five major areas in humanitarian forensic science. Volume One presents the first three of these areas: History, Theory, Practice, and Legal Foundation; Basic Forensic Information to Trace Missing Persons; and Stable Isotopes Forensics. Topics covered include: Protection of The Missing and the Dead Under International Law Social, Cultural and Religious Factors in Humanitarian Forensic Science Posthumous Dignity and the Importance in Returning Remains of the Deceased The New Disappeared – Migration and Forensic Science Stable Isotope Analysis in Forensic Anthropology Volume Two covers two further areas of interest: DNA Analysis and the Forensic Identification Process. It concludes with a comprehensive set of case studies focused on identifying the deceased, and finding missing persons from around the globe, including: Forensic Human Identification from an Australian Perspective Skeletal Remains and Identification Processing at the FBI Migrant Deaths along the Texas/Mexico Border Humanitarian Work in Cyprus by The Committee on Missing Persons (CMP) Volcán De Fuego Eruption – Natural Disaster Response from Guatemala Drawing upon a wide range of contributions from respected academics working in the field, Forensic Science and Humanitarian Action is a unique reference for forensic practitioners, communities of humanitarian workers, human rights defenders, and government and non-governmental officials.
