National Space Law 2008 Christian Brünner Durch den Start des Satelliten BRITE Austria (TUGSAT-1) im Jahr 2008 wird Österreich erstmals "Start-Staat" im volkerrechtlichen Sinn sein. Mangels eines österreichischen Weltraum-Gesetzes sind viele Rechtsfragen in diesem Kontext jedoch ungeklärt. Im September 2006 kamen internationale Experten zu einer Konferenz in Graz zusammen, um über Notwendigkeit und Mindestinhalte nationaler Weltraumrechts-Gesetze zu diskutieren. Konferenzbeiträge und Ergebnisse, weiterführende Analysen und der mögliche Inhalt eines österreichischen Weltraumgesetzes, dies auf der Basis eines Vergleichs mit jüngsten nationalen Weltraumgesetzen in Europa, werden zum Teil auf Englisch und zum Teil auf Deutsch veröffentlicht.

National Space Legislation 2018-02-16 Annette Froehlich This book provides a unique in-depth comparative and evaluative analysis based upon primary sources. Therefore, it does not only provide a more complete understanding of the subject compared to other publications but, because it provides a full perspective, can also serve as a basis for further research. The interest in national space legislation, and the importance thereof to regulating space activities conducted by private entities, gives a clear incentive to conduct a comparative analysis of the national space legislation of various states. The purpose of this report is to provide such a comparative analysis that will detail the similarities and differences between the national space laws of selected states with a focus on European comprehensive national space legislation. The states discussed are: Sweden, the United Kingdom, Australia, China, Belgium, the Netherlands, France, Austria, Indonesia, Denmark, New Zealand and Luxembourg. This report is intended to assist the efforts of states that are seeking to enact or revise national space legislation not only by presenting the approaches taken by other states, but also by presenting, as far as possible, the rationale behind their approaches. The readership of this book consists of academics and professionals in space law and can further assist policymakers wishing to revise or enact national space legislation.

Outer Space in Society, Politics and Law 2012-08-30 Christian Brünner Spaceflight is a rational undertaking, yet full of emotions. It is a dream of mankind and a multi-billion industry likewise. It is subject to a distinct branch of law – and moreover part of modern pop culture. In short: spaceflight is fascinating. “Outer Space in society, politics and law” is an inter-disciplinary approach to the understanding of modern space law. Technical, cultural and historical aspects lay the foundation for a sound comprehension why space law norms have been established and what they mean in practice. The reader will realize the impact space and spaceflight have on society – from Stonehenge to climate change. A new approach to presenting space law: comprehensive and illustrative. “We live in a society absolutely dependent on science and technology and yet have cleverly arranged things so that almost no one understands science and technology. That's a clear prescription for disaster.” Carl Sagan

War and Peace in Outer Space 2020-11-20 Cassandra Steer This book delves into legal and ethical concerns over the increased weaponization of outer space and the potential for space-based conflict in the very near future. Global Space Governance: An International Study 2017-09-12 Ram S. Jaku This book is based on the findings, conclusions and recommendations of the Global Space Governance study commissioned by the 2014 Montreal Declaration that called upon civil society, academics, governments, the private sector, and other stakeholders to undertake an international interdisciplinary study. The study took three years to complete. It examines the drivers of space regulations and standards, key regulatory problems, and especially addresses possible improvements in global space governance. The world's leading experts led the drafting of chapters, with input from academics and knowledgeable professionals in the public and private sectors, intergovernmental organizations, and nongovernmental organizations from all the regions of the world with over 80 total participants. This book and areas identified for priority action are to be presented to the UN Committee on the Peaceful Uses of Outer Space and it is hoped will be considered directly or indirectly at the UNISPACE+50 event in Vienna, Austria, in 2018. The report, a collective work of all the contributors, includes objective analysis and frank statements expressed without pressure of political, national, and occupational concerns or interest. It is peer-reviewed and carefully edited to ensure its accuracy, preciseness, and readability. It is expected that the study and derivative recommendations will form the basis for deliberations and decisions at international conferences and meetings around the world on the theme of global space governance. This will hopefully include future discussion at the UN Committee on the Peaceful Uses of Outer Space.

Europe in the Global Space Economy 2023-08-28 Patrizia Caraveo This book analyzes the policies and space economy programs of major space-faring nations and explores whether the present institutional set-up in Europe is adequate to address the challenges. At the core of the discussion are the relative roles of governments and markets in a highly dynamic panorama that involves advancements in science, modifications in technology and organization, and the introduction of new rules of behavior. After a close examination of the history of development of the space economy, and the shift from the centralized model to deregulation and the opening up of space activities to commercial companies, a wide-ranging overview of global space governance is provided. National and regional perspectives are discussed, and the current role of commercial actors in the global space system is elucidated. The various challenges faced by Europe are then examined, including the threat posed by institutional and market fragmentation to the emergence of European companies able to compete with companies of nations such as the USA. The final part of the book analyzes proposals for reforming of the space system in Europe and offers a vision for future European space policy.

War and Peace in Outer Space 2021-01-11 Cassandra Steer "Historically, strategic restraint was the dominant approach among nations active in outer space, all of whom understood that continued access to and use of space required holding back on threats or activities which might jeopardize the status quo of peace in space. However, recently there has been a discernible shift in international rhetoric towards a more offensive approach to defense in space. The U.S. move towards establishing a "Space Force" has been echoed by similar announcements in France and Japan. India launched an anti-satellite weapon test and announced proudly that it thereby joined the elite group of China, Russia and the U.S., who have all demonstrated this capability in the past. And as technologies in space advance, along with our terrestrial dependence on space-based systems for our peaceful civilian lives and for support of terrestrial warfare, the political stability of this vulnerable environment comes under threat. These factors, combined with a lack of transparency about actual capabilities and intentions on the part of all major players in space, creates a cyclical escalation which has led some commentators to describe this as a return to a Cold War-type arms race, and to the foreseeability of a space-based conflict. Due to many unique characteristics of the space domain, an armed conflict in space would be catastrophic for all players, including neutral States, commercial actors, and international civil society. Due to the specificity of the space domain, specialized expertise must be provided to decision-makers, and interdisciplinary opinions must be sought from a multitude of stakeholders. To that end, this volume provides a wide spectrum of perspectives from experts who have engaged together at a conference hosted by the Center for Ethics in the Rule of Law to discuss these issues. Ethical, legal and policy solutions are offered here by those with experience in the space sector, including academia, legal practitioners, military lawyers and operators, diplomats and policy advisors"--

Satellite television immediately informs us visually of events in formerly remote locations, as well as providing many entertainment channels. World telecommunication facilities have been revolutionised. Global positioning has improved transport. This book examines the varied elements of public law that lie behind and regulate the use of space. It also makes suggestions for the development and improvement of the law, particularly as private enterprise plays an increasing role in space.

Space Insurance: International Legal Aspects 2017-03-15 Katarzyna Malinowska Insurance related to outer space activities has been around since the 1960s, but has become vastly more significant with the increased commercial use of satellites. This book focuses on the legal aspects of space insurance in the contractual context, analysing space risk as well as the insurance terms used on the market. It offers the first in-depth coverage, both practical and theoretical, of space insurance from an international law perspective. Attending throughout to the important and problematic distinction between the space segment (upstream) and ground segment (downstream) in space law, this book deals comprehensively with such issues and topics as the following: - the main hazards relating to space activities; - the impact of new space technologies on the level of risk and insurance; - the differing types of risks attributable to various entities in the context of insurable interest; - aspects of the space risk allocation regimes and risk assessment; - the impact of the five 'space treaties' – the Outer Space Treaty, the Liability Convention, the Rescue Agreement, the Registration Convention and the Moon Agreement – on the subject and scope of insurance coverage; - the advent of suborbital flight, commercial human space flight and space tourism in the context of emerging insurance risks; - the problem of space debris; - contractual aspects of space activities affecting the space insurance risks; - basic notions such as 'outer space', 'space object' in the context of space activities and related insurance coverage; - basic insurance principles and their operation in the space insurance; and - the adjustment of losses and the settlement of disputes in space insurance. The author emphasises the need to understand the various insurance risks facing particular types of commercial space activities, including pre-launch, launch, transportation, spaceflight, satellite communications, satellite navigation, satellite remote sensing and space station operation. Satellites are increasingly a vital part of many daily activities of contemporary society and the Earth's orbit is becoming ever more crowded, heightening the risks of collision, damage and claims. This thoroughly researched book will therefore be extremely useful to lawyers, policymakers and academics tasked with defining the scope of insurance coverage that accurately mirrors technological, contractual and legal reality. Its practical aspect will be of extraordinary value to insurance lawyers, underwriters and brokers.

Spaceports in Europe 2022-01-01 Annette Froehlich This book explores how Europe is seeking to enlarge its launching capacities by building additional spaceports on the European continent. Various national initiatives are envisaged resulting in a "space race" in the field of constructing spaceports and building micro launchers. However, right from the beginning when choosing the launch site (land or sea based-rocket launches) there are various factors relating to international space law, European regulations and national rules that must be considered, as spaceports are rarely explicitly addressed in current legal and policy frameworks. While launching sites used to be operated by governments, private commercial initiatives are increasingly entering the field. This paradigm shift must be reflected within regulations relating to various aspects of space liability by enlarging the long-established terms of the United Nations space treaties to accommodate commercial space flights. Questions of permission, supervision and control require special liability regulations to avoid detrimental consequences stemming from the concept of "launching states" in view of the rise of private driven commercial space activities on a global level. Furthermore, not only do environmental aspects need to be thoroughly examined but also the concept of critical infrastructure requires special attention from a security perspective to anticipate, inter alia, cyber-attacks. For these reasons, several European and national regulations may need to be enlarged to apply to the entire space sector, using a harmonized approach that has direct implications for the regulations, programmes, and missions of the European Union and the European Space Agency, bearing in mind that the upcoming spaceports in Europe are an essential asset to substantially boost the European New Space.

Handbook on European data protection law 2018-04-15 Council of Europe The rapid development of information technology has exacerbated the need for robust personal data protection, the right to which is safeguarded by both European Union (EU) and Council of Europe (CoE) instruments. Safeguarding this important right entails new and significant challenges as technological advances expand the frontiers of areas such as surveillance, communication interception and data storage. This handbook is designed to familiarise legal practitioners not specialised in data protection with this emerging area of the law. It provides an overview of the EU's and the CoE's applicable legal frameworks. It also explains key case law, summarising major rulings of both the Court of Justice of the European Union and the European Court of Human Rights. In addition, it presents hypothetical scenarios that serve as practical illustrations of the diverse issues encountered in this ever-evolving field.

Private Law, Public Law, Metalaw and Public Policy in Space 2016-05-10 Patricia Margaret Sterns The law of outer space is rapidly evolving to adapt to changes in the economic drivers as well as advancements in technological capabilities. The contents of this book are a reflection of this changing environment as evidenced in the writings of the second and third generations of space lawyers. Theoretical aspects of space law are explored by chapters relating to fundamental concepts central to the corpus juris spatialis. Practical aspects of space law are probed by examinations into international and domestic regulation of commercial activities, with particular emphasis on African, Asian, and European perspectives. International policy considerations are scrutinized in relation to military uses of outer space. The scientific Search for Extraterrestrial Intelligence (SETI) is the subject of a concise history of the discipline vis-a-vis the role of the SETI Permanent Committee of the International Academy of Astronautics (IAA), and also of a study of the policy and other ramifications of social media in the event of the discovery of intelligent extraterrestrial beings. The book concludes with the republication of the seminal and highly influential Relations With Alien Intelligences The Scientific Basis of Metalaw by Dr. Ernst Fasan, first published in 1970. Scholar, author, and attorney Ernst Fasan was among the original space lawyers, a small, pioneering group of visionaries who recognized that the movement of man into space must be accomplished without the shackles of history and in an environment free from the threat of the use of space as an instrument of armed aggression. The influence of Dr. Fasan has extended beyond the international legal community to the broader scientific community, especially to the field of astrobiology, as he pursued groundbreaking investigations into what could be the ultimate in legal relationships - metalaw - the interaction of sentient beings from different planets. The contributors to this Liber Amicorum are among those who can trace their own work to the foundations of space law placed in part by Ernst Fasan.

Yearbook on Space Policy 2017 2019-02-12 Edward Burger The book describes the recent trends in space policy and the space sector overall. While maintaining a global scope with a European perspective, it links space policy with other policy areas, highlights major events, and provides insights on the latest data. The Yearbook includes the proceedings of ESPI's 12th Autumn Conference, which discussed the growing importance of Security in Outer Space and the stakes for civilian space programmes in the public and private sectors. Bringing together satellite operators, SMEs, European and American institutions, and think tanks, the Autumn Conference served as platform for fresh insights on security in outer space and the potential of transatlantic relations to address its challenges. The Yearbook also includes executive summaries of ESPI's work in 2017 as well as ESPI's 2017 Executive Briefs, covering topics such as suborbital spaceflight, super heavy lift launch vehicles, collaboration with China, and the delimitation of outer space. All in all, the book gives a detailed view of space policy developments worldwide, contextualised with information about national-level space industries and activity and broader political and economic conditions. The readership is expected to include the staff of space agencies, the space industry, and the space law and policy research community.

Routledge Handbook of Space Law 2016-11-10 Ram S. Jaku This handbook is a reference work providing a comprehensive, objective and comparative overview of Space Law. The global space economy reached \$330 billion in 2015, with a growth rate of 9 per cent vis-à-vis the previous year. Consequently, Space Law is changing and expanding expeditiously, especially at the national level. More laws and regulations are being adopted by space-faring nations, while more countries are adapting their Space Laws and regulations related to activities in outer space. More regulatory bodies are being created, while more regulatory diversity (from public law to private law) is being instituted as increasing and innovative activities are undertaken by private entities which employ new technologies and business initiatives. At the international level, Space Law (both hard law and soft law) is expanding in certain areas, especially in satellite broadcasting and telecommunications. The Routledge Handbook of Space Law summarises the existing state of knowledge on a comprehensive range of topics and aspires to set the future international research agenda by indicating gaps and inconsistencies in the existing law and highlighting

emerging legal issues. Unlike other books on the subject, it addresses major international and national legal aspects of particular space activities and issues, rather than providing commentary on or explanations about a particular Space Law treaty or national regulation. Drawing together contributions from leading academic scholars and practicing lawyers from around the world, the volume is divided into five key parts: • Part I: General Principles of International Space Law • Part II: International Law of Space Applications • Part III: National Regulation of Space Activities • Part IV: National Regulation of Navigational Satellite Systems • Part V: Commercial Aspects of Space Law This handbook is both practical and theoretical in scope, and may serve as a reference tool to academics, professionals and policy-makers with an interest in Space Law.

CCCTB 2012-05-10 Dennis Weber The European Commission's proposed Common Consolidated Corporate Tax Base (CCCTB) is the most ambitious project in the history of direct taxation within the EU. While retaining the right of Member States to set their own corporate tax rate, the proposed system allows for a 'one-stop shop' for filing tax returns and consolidating prof its and losses across the EU. In this book – the first to offer guidance to practitioners whose work will be affected by these new developments – 19 prominent representatives of the business community, tax consultancy, academic taxation scholarship and tax administration discuss the proposed system's rationale, structure and uncertainties, ranging from very technical aspects, to the wording of the proposal, to political considerations. These topics include the following: eligibility; formation of a group; the concept of 'permanent establishment'; foreign tax credits; 'dual resident' companies; consequences of entering and leaving; depreciation of fixed assets; repackaged asset transfers; appeals procedure; disagreements among Member States; subsidiarity and the 'yellow card procedure'; international aspects and tax treaties; sharing mechanism and transfer pricing; and anti-abuse rules. The discussion raises numerous issues likely to lead to future amendments, and for this reason, along with its practical value in developing an understanding of the proposed system's specific effects, the book will be welcomed by tax consultants and lawyers worldwide, corporate tax advisers, European tax authorities and tax researchers and academics.

Protection of Cultural Heritage Sites on the Moon 2020-04-03 Annette Froehlich This book provides an extensive overview of the protection of cultural heritages sites on the Moon (humanity's lunar heritage) and the various threats they face. First of all, the international legal framework, especially the relevant space treaties are analyzed in terms of how they protect cultural heritages sites on the Moon. In turn, the book explores key aspects like the application of customary law, the UNESCO World Heritage Convention, or the Underwater Convention, and the possibility of adding these sites to UNESCO's World Heritage list. The book subsequently addresses the question of how to define culture heritage sites or artifacts, in particular in view of the “Outstanding Universal Value” criterion, which is a vital aspect in order to differentiate them from space garbage or even space threats. Lastly, the book proposes and elaborates on various protection systems and multilateral protection regulations. Especially now, 50 years after the first human landing on the Moon, the book is a timely publication that will be of interest to all scholars and professionals working in the space field.

International Actors and the Formation of Laws 2022-07-16 Katja Karjalainen This open access book addresses the discourse that creates, modifies, and reshapes the law, as well as discourse participants. The book focuses on the actors operating in legal regimes and their subtly, bluntly, or even outright aggressive impact on the formation of laws. As the book examines the intersection of domestic, European, international, and even transnational, legal regimes where new law emerges as a product of this discourse, it contributes to the understanding of the mobility of law and contemporary law's interactive nature. This book provides enlightening examples of diverse legal fields influenced by international, non-domestic actors. It covers a wide range of relevant topics, from financial sanctions to the rights of indigenous peoples, and addresses actors ranging from the European Union and the European Court of Human Rights to disability organizations. By exploring actors, the book stresses their objectives and driving forces behind their efforts to influence law. The book reveals an array of diverging methods used by international actors to influence law. Additionally, the book resonates with Nordic legal tradition and highlights Nordic commitment to rule of law and equality. The authors are members of the Finnish branch of the International Law Association (ILA) and recognized experts in their particular fields and have been afforded freedom to adopt the approach they perceive as best suited to their topic. The book is aimed at a broad range of readers involved in academic research and study; lawyers working in government departments, international organizations, or private practice with an international focus; as well as policy makers and influencers in international organizations, government bodies, and non-governmental organizations.

Space Strategy in the 21st Century 2013 Eligar Sadeh This book offers an overview of space strategy in the 21st century. The purpose of space strategy is to coordinate, integrate, and prioritize space activities across security, commercial, and civil sectors. Without strategy, space activities continue to provide value, but it becomes difficult to identify and execute long-term programs and projects and to optimize the use of space for security, economic, civil, and environmental ends. Strategy is essential for all these ends since dependence on, and use of, space is accelerating globally and space is integrated in the fabric of activities across all sectors and uses. This volume identifies a number of areas of concern pertinent to the development of national space strategy, including: intellectual foundations; political challenges; international cooperation and space governance; space assurance and political, organizational, and management aspects specific to security space strategy. The contributing authors expand their focus beyond that of the United States, and explore and analyse the international developments and implications of national space strategies of Russia, China, Europe, Japan, India, Israel, and Brazil. This book will be of much interest to students of space power and politics, strategic studies, foreign policy and International Relations in general.
