Post-Liberal Peace Transitions 2016-01-18 Oliver P. Richmond Why is it that states emerging from intervention, peacebuilding and statebuilding over the last 25 years appear to be 'failed by design'? This study explores the interplay of local peace agency with the (neo)liberal peacebuilding project. And it looks at how far can local 'peace formation' dynamics can go to counteract the forces of violence and play a role in rebuilding the state, consolidate peace processes and induce a more progressive form of politics. By looking at local agency related to peace formation, Oliver Richmond and Sandra Pogodda find answers to the pressing question of how large-scale peacebuilding or statebuilding may be significantly improved and made more representative of the lives, needs, rights, and ambitions of its subjects.

Fundamentals of Instrumentation and Measurement 2013-03-01 Dominique Placko This title presents the general principles of instrumentation processes. It explains the theoretical analysis of physical phenomena used by standard sensors and transducers to transform a physical value into an electrical signal. The pre-processing of these signals through electronic circuits - amplification, signal filtering and analog-to-digital conversion - is then detailed, in order to provide useful basic information. Attention is then given to general complex systems. Topics covered include instrumentation and measurement chains, sensor modeling, digital signal processing and

diagnostic methods and the concept of smart sensors, as well as microsystem design and applications. Numerous industrial examples punctuate the discussion, setting the subjects covered in the book in their practical context.

Stabilization Operations, Security and Development 2013-07-24 Robert Muggah This edited volume provides a critical overview of the new stabilization agenda in international relations. The primary focus of so-called stability operations since 9/11 has been Afghanistan, Pakistan and Iraq. Covering the wider picture, this volume provides a comprehensive assessment of the new agenda, including the expansion of efforts in Latin America, the Caribbean, Sub-Saharan Africa and South and Southeast Asia. By harnessing the findings of studies undertaken in Brazil, Colombia, Haiti, Jamaica, Kenya, Democratic Republic of the Congo (DRC), Sudan and Sri Lanka, the volume demonstrates the impacts - intended and otherwise - of stabilization in practice. The book clarifies the debate on stabilization, focusing primarily on the

policy, practice and outcomes of such operations. Rather than relying exclusively on existing military doctrine or academic writings, the volume focuses on stabilization as it is actually occurring. Drawing on the reflections of scholars and practitioners, the volume identifies the origins and historical antecedents of contemporary operations, and also examines how the practice is linked to other policy spheres – ranging from peacebuilding to statebuilding. Finally, the volume reviews eight practical cases of stabilization in disparate regions around the globe. This book will be of much interest to students of war and conflict studies, peacekeeping and peacebuilding, statebuilding, development studies and international relations in general.

Fundamentals of Digital Logic with Verilog Design 2007-05-14 Stephen Brown Fundamentals of Digital Logic With Verilog Design teaches the basic design techniques for logic circuits. It emphasizes the synthesis of circuits and explains how circuits are implemented in real chips. Fundamental concepts are illustrated by using small examples. Use of CAD software is well integrated into the book. A CD-ROM that contains Altera's Quartus CAD software comes free with every copy of the text. The CAD software provides automatic mapping of a design written in Verilog into Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs). Students will be able to try, firsthand, the book's Verilog examples (over 140) and homework problems. Engineers use Quartus CAD for designing, simulating, testing and implementing logic circuits. The version included with this text supports all major features of the commercial product and comes with a compiler for the IEEE standard Verilog language. Students will be able to: enter a design into the CAD system compile the design into a selected device simulate the functionality and timing of the resulting circuit implement the designs in actual devices (using the school's laboratory facilities) Verilog is a complex language, so it is introduced gradually in the book. Each Verilog feature is presented as it becomes pertinent for the circuits being discussed. To teach the student to use the Quartus CAD, the book includes three tutorials.

The Nexus Between Security Sector Governance/Reform and Sustainable Development Goal-16 2021-05-27 Oya Dursun-Özkanca This Security Sector Reform (SSR) Paper offers a universal and analytical perspective on the linkages between Security Sector Governance (SSG)/SSR (SSG/R) and Sustainable Development Goal-16 (SDG-16), focusing on conflict and post-conflict settings as well as transitional and consolidated democracies. Against the background of development and security literatures traditionally maintaining separate and compartmentalized presence in both academic and policymaking circles, it maintains that the contemporary security- and development-related challenges are inextricably linked, requiring effective measures with an accurate understanding of the nature of these challenges. In that sense, SDG-16 is surely a good step in the right direction. After comparing and contrasting SSG/R and SDG-16, this SSR Paper argues that human security lies at the heart of the nexus between the 2030 Agenda of the United Nations (UN) and SSG/R. To do so, it first provides a brief overview of the scholarly and policymaking literature on the development-security nexus to set the background for the adoption of The Agenda 2030. Next, it reviews the literature on SSG/R and SDGs, and how each concept evolved over time. It then identifies the puzzle this study seeks to address by comparing and contrasting SSG/R with SDG-16. After making a case that human security lies at the heart of the nexus between the UN's 2030 Agenda and SSG/R, this book analyses the strengths and weaknesses of human security as a bridge between SSG/R and SDG-16 and makes policy recommendations on how SSG/R, bolstered by human security, may help achieve better results on the SDG-16 targets. It specifically emphasizes the importance of transparency, oversight, and accountability on the one hand, and participative approach and local ownership on the other. It concludes by arguing that a simultaneous emphasis on security and development is sorely needed for addressing the issues under the purview of SDG-16.

Standard Handbook of Electronic Engineering, 5th Edition 2005 Donald Christiansen The Standard Handbook of Electronics Engineering has defined its field for over thirty years. Spun off in the 1960's from Fink's Standard Handbook of Electrical Engineering, the Christiansen book has seen its markets grow rapidly, as electronic engineering and microelectronics became the growth engine of digital computing. The EE market has now undergone another seismic shift—away from computing and into communications and media. The Handbook will retain much of its evergreen basic material, but the key applications sections will now focus upon communications, networked media, and medicine—the eventual destination of the majority of graduating EEs these days.

Whose Peace? 2016-12-06 Sarah B. K. von Billerbeck Recent years have seen an increasing emphasis on local ownership in United Nations peacekeeping. Advocates assert that it boosts the legitimacy and sustainability of peacekeeping by helping to preserve the principles of self-determination and non-imposition in an activity that can contravene them. However, whether this assertion holds in practice has not been backed up by careful conceptual and empirical analysis. This book fills this gap by mapping the discourse, understandings, and operationalization of local ownership in UN peacekeeping, both from the perspective of the UN and local actors. Drawing on the case of the UN peacekeeping operation in DR Congo and a number of other cases, it shows that despite its regular invocation of local ownership discourse, the UN operationalizes ownership in restrictive ways that are intended to protect the achievement of operational goals but which consequently limit self-determination and increase external imposition on the host country. This gap between the rhetoric and reality of ownership suggests that the UN uses local ownership primarily as a discursive tool for legitimation, one intended to reconcile conflicting normative and operational imperatives that it faces. However, because its actions do not match its rhetoric, the UN's attempts to generate legitimacy through discourse appear to fall flat, particularly in the eyes of local actors, and because of contradictions in the ways that the UN operationalizes local ownership, it also inhibits the achievement of its operational goals as well.

ANALOG ELECTRONICS 2009-01-13 L. K. MAHESHWARI This text offers a comprehensive introduction to a wide, relevant array of topics in analog electronics. It is intended for students pursuing courses in electrical, electronics, computer, and related engineering disciplines. Beginning with a review of linear circuit theory and basic electronic devices, the text moves on to present a detailed, practical understanding of many analog integrated circuits. The most commonly used analog IC to build practical circuits is the operational amplifier or op-amp. Its characteristics, basic configurations and applications in the linear and nonlinear circuits are explained. Modern electronic systems employ signal generators, analog filters, voltage regulators, power amplifiers, high frequency amplifiers and data converters. Commencing with the theory, the design of these building blocks is thoroughly covered using integrated circuits. The development of microelectronics technology has led to a parallel growth in the field of Micro-electromechanical Systems (MEMS) and Nano-electromechanical Systems (NEMS). The IC sensors for different energy forms with their applications in MEMS components are introduced in the concluding chapter. Several computer-based simulations of electronic circuits using PSPICE are presented in each chapter. These examples together with an introduction to PSPICE in an Appendix provide a thorough coverage of this simulation tool that fully integrates with the material of each chapter. The end-of-chapter problems allow students to test their comprehension of key concepts. The answers to these problems are also given.

US Nation-Building in Afghanistan (Open Access) 2016-03-31 Conor Keane Why has the US so dramatically failed in Afghanistan since 2001? Dominant explanations have ignored the bureaucratic divisions and personality conflicts inside the US state. This book rectifies this weakness in commentary on Afghanistan by exploring the significant role of these divisions in the US's difficulties in the country that meant the battle was virtually lost before it even began. The main objective of the book is to deepen readers understanding of the impact of bureaucratic politics on nation-building in Afghanistan, focusing primarily on the Bush Administration. It rejects the 'rational actor' model, according to which the US functions as a coherent, monolithic agent. Instead, internal divisions within the foreign policy bureaucracy are explored, to build up a picture of the internal tensions and contradictions that bedevilled US nation-building efforts. The book also contributes to the vexed issue of whether or not the US should engage in nation-building at all, and if so under what conditions.

The Evolution of International Security Studies 2009-08-27 Barry Buzan International Security Studies (ISS) has changed and diversified in many ways since 1945. This book provides the first intellectual history of the development of the subject in that period. It explains how ISS evolved from an initial concern with the strategic consequences of superpower rivalry and nuclear weapons, to its current diversity in which environmental, economic, human and other securities sit alongside military security, and in which approaches ranging from traditional Realist analysis to Feminism and Post-colonialism are in play. It sets out the driving forces that shaped debates in ISS, shows what makes ISS a single conversation across its diversity, and gives an authoritative account of debates on all the main topics within ISS. This is an unparalleled survey of the literature and institutions of ISS that will be an invaluable guide for all students and scholars of ISS, whether traditionalist, 'new agenda' or critical.
