The Use and Storage of  
Methyl Isocyanate (MIC) at  
Bayer CropScience  
2012-08-31 National  
Research Council The use of  
hazardous chemicals such  
as methyl isocyanate can be  
a significant concern to the  
residents of communities  
adjacent to chemical  
facilities, but is often an  
integral part of the chemical  
manufacturing process. In  
order to ensure that  
chemical manufacturing  
takes place in a manner that  
is safe for workers,  
members of the local

community, and the  
environment, the philosophy  
of inherently safer  
processing can be used to  
identify opportunities to  
eliminate or reduce the  
hazards associated with  
chemical processing.  
However, the concepts of  
inherently safer process  
analysis have not yet been  
adopted in all chemical  
manufacturing plants. The  
Use and Storage of Methyl  
Isocyanate (MIC) at Bayer  
CropScience presents a  
possible framework to help  
plant managers choose  
between alternative  
processing options-  
considering factors such as  
environmental impact and  
product yield as well as  
safety- to develop a  
chemical manufacturing  
system. In 2008, an

production plant in Institute, West Virginia, resulted in the deaths of two employees, a fire within the production unit, and extensive damage to nearby structures. The accident drew renewed attention to the fact that the Bayer facility manufactured and stores methyl isocyanate, or MIC - a volatile, highly toxic chemical used in the production of carbamate pesticides and the agent responsible for thousands of death in Bhopal, India, in 1984. In the Institute accident, debris from the blast hit the shield surrounding a MIC storage tank, and although the container was not damaged, an investigation by the U.S. Chemical Safety and Hazard Investigation Board found that the debris could have struck a relief valve vent pipe and cause the release of MIC to the atmosphere. The Board's investigation also highlighted a number of weaknesses in the Bayer facility's emergency

response systems. In light of these concerns, the Board requested the National Research Council convene a committee of independent experts to write a report that examines the use and storage of MIC at the Bayer facility. The Use and Storage of Methyl Isocyanate (MIC) at Bayer CropScience also evaluates the analyses on alternative production methods for MIC and carbamate pesticides performed by Bayer and the previous owners of the facility.

use. It examines crop and pest ecology, integrated pest management principles, and emerging analytical tools to improve the efficacy and cost-efficiency of pest control. Expert contributions describe the current status of pesticides issues and those related to pest management. The book summarizes advances and trends in the crop protection industry, such as integrated pest management, hybrid seed and generic pesticide production, improved pesticide formulations, and plant biotechnology.

Farmer Innovation in Africa 2001 Chris Reij Based on fieldwork and involving farmers, extension workers and researchers, this is an edited volume of studies of how farmers successfully experiment and innovate to increase productivity, often in adverse and resource-poor conditions. shows how successful and motivating an approach that builds on farmer innovation can be. It confirms the resourcefulness of the farmers themselves and provides an alternative to the conventional "transfer of technology" development paradigm - one that recognizes the farmers themselves as the major resource.

Seed Money: Monsanto's Past and Our Food Future 2021-10-12 Bartow J. Elmore An authoritative and eye-opening history that examines how Monsanto came to have outsized influence over our food system. with German pharmaceutical giant Bayer in 2018—but its Roundup Ready® seeds, introduced twenty-five years ago, are still reshaping the farms that feed us. When researchers found trace amounts of the firm's blockbuster herbicide in breakfast cereal bowls, Monsanto faced public outcry. Award-winning historian Bartow J. Elmore shows how the Roundup story is just one of the troubling threads of Monsanto's past, many told here and woven together for the first time. A company employee sitting on potentially explosive information who weighs risking everything to tell his story. A town whose residents are urged to avoid their basements because Monsanto's radioactive waste laces their homes' foundations. Factory workers who peel off layers of their skin before accepting cash bonuses to continue dirty jobs. An executive wrestling with the

ethics of selling a profitable product he knew was toxic. Incorporating global fieldwork, interviews with company employees, and untapped corporate and government records, Elmore traces Monsanto's astounding evolution from a scrappy chemical startup to a global agribusiness powerhouse. Monsanto used seed money derived from toxic products—including PCBs and Agent Orange—to build an agricultural empire, promising endless bounty through its genetically engineered technology. Skyrocketing sales of Monsanto's new Roundup Ready system stunned even those in the seed trade, who marveled at the influx of cash and lavish incentives into their sleepy sector. But as new data emerges about the Roundup system, and as Bayer faces a tide of lawsuits over Monsanto products past and present, Elmore's urgent history shows how our food future is still very much determined by

the company's chemical past.

Plant Biotechnology: Progress in Genomic Era 2019-11-14 S. M. Paul Khurana Refinement in sequencing technologies and potential of genomic research resulted in meteoric growth of biological information such as sequences of DNA, RNA and protein requiring databases for efficient storage, management and retrieval of the biological information. Also, computational algorithms for analysis of these colossal data became a vital aspect of biological sciences. The work aims to show the process of turning bioscience innovation into companies and products, covering the basic science, the translation of science into technology. Due to rapid developments, there seems to be no basic difference between the pharmaceutical industry and the biotechnological

industry. However, approved products in the pipeline and renewed public confidence make it one of the most promising areas of economic growth in the near future. India offers a huge market for the products as well as cheap manufacturing base for export. The book is a sincere work of compilation of new and recent advances in the topic of concern through various innovative researches and scientific opinion therefrom. The book is dedicated to the readers who will definitely find it interesting and knowledgeable in carrying out their respective researches in different aspects of applied microbiology and biotechnology.

Concentration in Seed Markets 2018-12-04 Collectif  
Recent mergers in the seed industry have led to concerns about market concentration and its potential effects on prices, product choice, and

innovation. This study provides new and detailed empirical evidence on the degree of market concentration in seed and GM technology across a broad range of crops and countries, and analyses the causes and potential effects of concentration. It also explains how competition authorities have responded to mergers, and suggests policy options to help safeguard and stimulate competition and innovation in plant breeding by avoiding unnecessary regulatory barriers, by facilitating access to genetic resources and intellectual property, as well as by stimulating public and private R&D. As this study shows, policy makers have several levers besides competition policy to ensure an innovative and competitive seed industry.

driven improvements in living standards for millennia. Today, redoubling that effort in developing countries is critical to reducing extreme poverty, ensuring food security for an increasing global population, and adapting to changes in climate. This volume presents fresh analysis on global trends and sources of productivity growth in agriculture and offers new perspectives on the drivers of that growth. It argues that gains from the reallocation of land and labor are not as promising as believed, so policy needs to focus more on the generation and dissemination of new technologies, which requires stepping up national research efforts. Yet, in many of the poorest nations, a serious research spending gap has emerged precisely at the time when the challenges faced by agriculture are intensifying. The book focuses on how this problem can be redressed in the public

sector, as well as on reforms aimed at mobilizing new private sector actors and value chains, particularly creating a better enabling environment, reforming trade regulations, introducing new products, and strengthening intellectual property rights. On the demand side, the book examines what recent research reveals about policies to reduce the barriers impeding smallholder farmers from adopting new technologies. Harvesting Prosperity is the fourth volume of the World Bank Productivity Project, which seeks to bring frontier thinking on the measurement and determinants of productivity to global policy makers. "As rightly argued by the authors, growth in agricultural productivity is the essential instrument to promote development in low-income agriculture-based countries. Achieving this requires research and development, up

universities, reinforcement of farmer capacities, removal of constraints to adoption, and the development of inclusive value chains with interlinked contracts. As important, such efforts also need to be placed within a context of comprehensive agricultural, rural, and structural transformations. However, in many countries implementation of the requisite policies has been lagging. This book, with contributions from many top experts in the field, provides the most up-to-date presentation of this argument and explains in detail how to successfully put its ideas into practice. Governments, the private sector, and civil society organizations need to study it carefully to turn the promise of agriculture for development into a reality.”

Grasses 2019-06-12  
Hansjoerg Kraehmer  
Combines new findings on morphological aspects, the latest data on gene function in grasses, and the interaction of grasses with their habitats 45% of all arable land is covered by five grass crops: wheat, maize, rice, barley and sugar cane. This book demonstrates why crops and weeds are growing in characteristic environments today, and looks at how cropping practices may change in the future and how these changes will affect weed spectra. It explains the distribution of grasses and their role for mankind and summarizes our knowledge on grass genomes. Special emphasis is placed on the function of genes at defined developmental stages and in organs of grasses. The development of grasses is

then described from the germination to fruit set with many unpublished examples. Grasses: Crops, Competitors and Ornamentals provides readers with a comparative description of selected grass organs (stem, root, leaf, inflorescence) and devotes several chapters to habitats of grasses and morphological characteristics that enable grasses to grow in special environments. In addition, some chapters deal with grasses as crops and weeds, and emphasis is placed on their adaptation to modern agriculture. Predicts how cropping practices may change in the future and how these changes will affect weed spectra Details grasses as crops and weeds, emphasizing their adaptation to modern agriculture Summarizes our knowledge on grass genomes Connects classical morphology with the latest tools in molecular biology as well as ecological aspects from

Genetically Engineered Crops 2017-01-28 National Academies of Sciences, Engineering, and Medicine Genetically engineered (GE) crops were first introduced commercially in the 1990s. After two decades of production, some groups and individuals remain critical of the technology based on their concerns about possible adverse effects on human health, the environment, and ethical considerations. At the same time, others are concerned that the technology is not

reaching its potential to improve human health and the environment because of stringent regulations and reduced public funding to develop products offering more benefits to society. While the debate about these and other questions related to the genetic engineering techniques of the first 20 years goes on, emerging genetic-engineering technologies are adding new complexities to the conversation.

Genetically Engineered Crops builds on previous related Academies reports published between 1987 and 2010 by undertaking a retrospective examination of the purported positive and adverse effects of GE crops and to anticipate what emerging genetic-engineering technologies hold for the future. This report indicates where there are uncertainties about the economic, agronomic, health, safety, or other impacts of GE crops and food, and make

Corporate Crops 2012-12-01  
Gabriela Pechlaner  
Biotechnology crop production area increased from 1.7 million hectares to 148 million hectares worldwide between 1996 to 2010. While genetically modified food is a contentious issue, the debates are usually limited to health and environmental concerns, ignoring the broader questions of social control that arise when food production methods become corporate-owned intellectual property. Drawing on legal documents and dozens of interviews with farmers and other stakeholders, Corporate Crops covers four case studies based around litigation between biotechnology corporations and farmers. Pechlaner investigates the extent to

which the proprietary aspects of biotechnologies—from patents on seeds to a plethora of new rules and contractual obligations associated with the technologies—are reorganizing crop production. The lawsuits include patent infringement litigation launched by Monsanto against a Saskatchewan canola farmer who, in turn, claimed his crops had been involuntarily contaminated by the company's GM technology; a class action application by two Saskatchewan organic canola farmers launched against Monsanto and Aventis (later Bayer) for the loss of their organic market due to contamination with GMOs; and two cases in Mississippi in which Monsanto sued farmers for saving seeds containing its patented GM technology. Pechlaner argues that well-funded corporate lawyers have a decided advantage over independent farmers

the courts and in creating new forms of power and control in agricultural production. Corporate Crops demonstrates the effects of this intersection between the courts and the fields where profits, not just a food supply, are reaped.

Shock Waves 2015-11-23  
Stephane Hallegatte Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change

policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

GM Food on Trial  
2009-12-04 Les Levidow  
Europe was told that it had no choice but to accept agbiotech, yet this imperative was turned into a test of democratic accountability for societal choices. Since the late 1990s, European public controversy has kept the agri-biotech industry and its

promoters on the defensive. As some opponents and regulators alike have declared, 'GM food/crops are on trial'. Suspicion of their guilt has been evoked by moral symbols, as disputes over whether genetically-modified products are modest benign improvements on traditional plant breeding, or dangerous Frankenfoods; and in disputes over whether they are global saviours, or control agents of multinational companies. This book examines European institutions being 'put on trial' for how their regulatory procedures evaluate and regulate GM products, in ways which opened up alternative futures. Levidow and Carr highlight how public controversy created a legitimacy crisis, leading to national policy changes and demands, in turn stimulating changes in EU agbiotech regulations as a strategy to regain legitimacy.

Enabling the Business of Agriculture 2019 2019-11-18 World Bank Group Enabling the Business of Agriculture 2019 presents indicators that measure the laws, regulations and bureaucratic processes that affect farmers in 101 countries. The study covers eight thematic areas: supplying seed, registering fertilizer, securing water, registering machinery, sustaining livestock, protecting plant health, trading food and accessing finance. The report highlights global best performers and countries that made the most significant regulatory improvements in support of farmers.

Oerke The objective of this book is to provide information to be used as a basis for evaluating the fragile, shaky structure of global food production. The volume analyses the data by region and by intensity of cultivation; and furnishes information about the yield response, giving some indication of the health of the plants. It will be invaluable to all plant and crop scientists as well as to agriculturalists.

Gender in Agriculture  
2014-04-29 Agnes R. Quisumbing  
The Food and Agriculture Organization of the United Nations (FAO) produced a 2011 report on women in agriculture with a clear and urgent message: agriculture underperforms because half of all farmers—women—lack equal access to the resources and opportunities they need to be more productive. This book builds on the report's conclusions by providing, for a non-

specialist audience, a compendium of what we know now about gender gaps in agriculture.

Sustainability in Food Consumption and Food Security 2020-12-15 József H.c. Popp  
The transformation of food chains towards sustainability in food consumption and food security is a global issue, connected with the global challenges of poverty reduction, employment and urbanization. Combating malnutrition—undernutrition and micronutrient deficiencies—as well as overweight and obesity is an increasing problem. The main topics to be examined are the following: Ensuring sustainable food production (land and sea), sustainable diets and sustainable communities, including issues for agricultural transformation in face of increasing competition for land use; promoting healthy food systems and increasing the focus on nutrition, with

multiple implications for diet quality, vulnerable groups, and informed choice; biotechnology could play an important role in climate change mitigation (e.g., nutrient-efficient plants) and adaptation (e.g., drought-tolerant plants), renewable energies, biodegradable products, rural development, and global food security; identifying the means to promote resilience, including resilience in ecosystems and in international markets; responding to climate change and other environmental and social change. The focus should also cover issues for vulnerable groups such as mothers and children, the elderly, patients, and migrants to understand the general aspects of consumer behavior. Sustainability related to product standards and reactions of consumers to these standards are also of great importance.

Crop Production for Agricultural Improvement 2012-06-02 Muhammad Ashraf In the recent years, the looming food scarcity problem has highlighted plant sciences as an emerging discipline committed to devise new strategies for enhanced crop productivity. The major factors causing food scarcity are biotic and abiotic stresses such as plant pathogens, salinity, drought, flooding, nutrient deficiency or toxicity which substantially limit crop productivity world-wide. In this scenario, strategies should be adopted to achieve maximum productivity and economic crop returns. In this book we

have mainly focused on physiological, biochemical, molecular and genetic bases of crop development and related approaches that can be used for crop improvement under environmental adversaries. In addition, the adverse effects of different biotic (diseases, pathogens etc.) and abiotic (salinity, drought, high temperatures, metals etc) stresses on crop development and the potential strategies to enhance crop productivity under stressful environments are also discussed.

change the root causes that create these challenges in the first place. The system itself needs to change. But how to do that? This groundbreaking book *Changing the Game* reveals the missing insights and strategies to actually achieve system change. The authors Lucas Simons and André Nijhof bring decades of real life and academic experience, and state that most of the sustainability challenges are actually caused by the same system failures, every time. Therefore, the way to accelerate and manage system change is also similar every time - if you know where to look and how to act. The theory of sustainable market transformation and system change is described in a compelling and easy to understand eight-step approach applied to eight different sectors. The authors, together with respected sector experts, describe the drivers, triggers and dominant thinking in

each of these sectors as well as the strategies needed to move towards higher levels of sustainability. This book is highly accessible and engaging, and is perfect for use by professionals, leaders and students for understanding how to move markets to a more sustainable future.

*In Defense of Farmers*  
2019-07 Jane Gibson

Industrial agriculture is generally characterized as either the salvation of a growing, hungry, global population or as socially and environmentally irresponsible. Despite elements of truth in this polarization, it fails to focus on the particular vulnerabilities and potentials of industrial agriculture. Both representations obscure individual farmers, their families, their communities, and the risks they face from unpredictable local, national, and global conditions: fluctuating demand

often volatile production costs and crop prices; extreme weather exacerbated by climate change; complicated and changing farm policies; new production technologies and practices; water availability; inflation and debt; and rural community decline. Yet the future of industrial agriculture depends fundamentally on farmers' decisions. In *Defense of Farmers* illuminates anew the critical role that farmers play in the future of agriculture and examines the social, economic, and environmental vulnerabilities of industrial agriculture, as well as its adaptations and evolution. Contextualizing the conversations about agriculture and rural societies within the disciplines of sociology, geography, economics, and anthropology, this volume addresses specific challenges farmers face in four countries: Bolivia, Brazil, Canada, and the

By concentrating on countries with the most sophisticated production technologies capable of producing the largest quantities of grains, soybeans, and animal proteins in the world, this volume focuses attention on the farmers whose labors, decision-making, and risk-taking throw into relief the implications and limitations of our global industrial food system. The case studies here acknowledge the agency of farmers and offer ways forward in the direction of sustainable agriculture.

Food Security, Agricultural Policies and Economic Growth 2017-04-21 Niek Koning Using a political-economic approach supplemented with insights from human ecology, this volume analyzes the long-term dynamics of food security and economic growth. The book begins by discussing the nature of preindustrial food crises and the changes that have occurred since the 19th century with the ascent of technical science and the fossil fuel revolution. It

explains how these changes improved living standards but that the realization of this improvement was usually dependent on government support for smallholder modernization. The author sets out how the evolution of food security in different regions has been influenced by farm policy choices and how these choices were shaped by local societal characteristics, international relations and changing configurations in metropolitan countries. Separate chapters are devoted to the interaction of this evolution with debates on food security and economic growth and with international economic policies. The final chapters highlight the new challenges for global food security that will arise as traditional sources of biomass production and the more easily extractable reserves of fossil biomass become depleted or can no longer be used. Overall, the book emphasizes the

of current explanations with regard to these challenges. It explores what is needed to ensure a sustainable future and calls for a rethinking of these issues; a necessary reflection in today's unstable global political situation.

#### Nightmare that Never Ends

Sam awoke with a jump, his body drenched in sweat. The same unsettling nightmare had once again tormented his sleep, the one where he was chased by a shadowy figure wielding a knife. He glanced at the clock; it was 3:15 am. He tried to calm his pounding heart, attempting to convince himself that it was merely a dream. Yet, deep down, he knew it was far more than that. He knew the mysterious figure was real, and it was moving relentlessly towards him. He had seen it before, in the terrifying news reports, in the precise police sketches, in the stricken faces of the victims. It was the dreaded serial killer that had been plaguing the city for what seemed like an eternity. And Sam was next.
