Reading introduction to photogeology and remote sensing bgs—Chapter four of Holt Chemistry, titled “Periodic Table”, provides a thorough look of the table of elements and its elements. The chapter begins with a discussion on the properties of groups and periodic groups, clarifying how Russian chemist Dmitri Mendeleev arranged elements by their atomic weight in ascending order¹. It then dives into the idea of valence electrons and levels of energy of atoms, highlighting the part of these electrons in chemical reactions and transformations to atomic structures and molecular structures.

The chapter additionally differentiates between transition elements and main elements, elaborating on their features and traits. It also explains the concept of ionization energy and its patterns among groups and periods on the table of elements¹. The chapter discusses atomic and radii, and how these can be forecasted based on an atom’s position on the periodic table.

The concept of electronegativity, which quantifies an element’s inclination to attract a bonding pair of electrons, is another key topic discussed in this chapter¹. The chapter finishes with a discussion on the diagonal relationship, metallic character, and boiling point of components.
