Chapter four of Holt Chemistry, titled "The Periodic Table", provides a detailed overview of the table of elements and its constituents. The chapter opens with a conversation on the properties of groupings and periodic groups, elucidating how the Russian chemist Mendeleev arranged elements by their atomic weight in ascending order¹. It then explores the notion of outer electrons and levels of energy of atoms, underscoring the part of these electrons in reactions and alterations to atomic structures and molecules.

The chapter further separates between transition elements and main group elements, detailing on their characteristics and attributes. It also explains the concept of energy of ionization and its tendencies among groupings and periods on the periodic table¹. The chapter talks about atom's and radii, and how these can be anticipated based on an atom's place on the table of elements.

Electronegativity, which calculates an element's tendency to attract a bonding pair of electrons, is another key subject addressed in this section¹. The chapter concludes with a discussion on the diagonal relationship, metallic character, and boiling point of elements.

In terms of practice questions, the chapter provides a variety of questions for practice and standardized test preparation resources to strengthen the notions learned. These exercises cover a range of subjects, from understanding the order of components to investigating the patterns in the periodic table.
