<p>Assessing Prevalence and Trends in Obesity</p> <p>2016-09-30 National Academies of Sciences, Engineering, and Medicine Obesity has come to the forefront of the American public health agenda. The increased attention has led to a growing interest in quantifying obesity prevalence and determining how the prevalence has changed over time. Estimates of obesity prevalence and trends are fundamental to understanding and describing the scope of issue. Policy makers, program planners, and other stakeholders at the national, state, and local levels are among those who search for estimates relevant to their population(s) of interest to inform their decision-making. The differences in the collection, analysis, and interpretation of data have given rise to a body of evidence that is inconsistent and has created barriers to interpreting and applying published reports. As such, there is a need to provide guidance to those who seek to better understand and use estimates of obesity prevalence and trends. Assessing Prevalence and Trends in Obesity examines the approaches to data collection, analysis, and interpretation that have been used in recent reports on obesity prevalence and trends at the national, state, and local level, particularly among U.S. children, adolescents, and young adults. This report offers a framework for assessing studies on trends in obesity, principally among children and young adults, for policy making and program planning purposes, and recommends ways decision makers and others can move forward in assessing and interpreting reports on obesity trends.</p>

<p><i>A Health Equity Approach to Obesity Efforts</i></p> <p>2019-12-05 National Academies of Sciences, Engineering, and Medicine The obesity crisis in the United States disproportionately affects some demographic groups more than others. Contextual influences on obesity are complex and include an individual's weight-related behaviors and outcomes, the intermediate variables that influence these behaviors and outcomes, and broader, upstream historical, social, economic, physical, and policy contexts. The National Academies convened a workshop on April 1, 2019 to explore the history of health equity issues in demographic groups that have above-average obesity risk and to consider principles and approaches to address these issues as part of obesity prevention and treatment efforts. This publication summarizes the presentations and discussions from the workshop.</p>

<p>Handbook of Children with Special Health Care Needs</p> <p>2012-07-15 David Hollar Children with chronic conditions, developmental disorders, and birth defects represent a sizeable minority of American children—as many as one in five. Often their families have financial or other issues limiting their access to appropriate care, thus limiting their adult prospects as well. Compounding the problem, many valuable resources concerning this population are difficult to access although they may be critical to the researchers, practitioners, and policymakers creating standards for quality care and services. In response, the Handbook of Children with Special Health Care Needs assembles research, applied, and policy perspectives reflecting the range of children’s problems requiring special services. Widely studied conditions (e.g., communication disorders, substance abuse) and those receiving lesser attention (e.g., tuberculosis) are covered, as are emerging ideas such as the “medical home” concept of continuity of care. Its interdisciplinary outlook makes the Handbook of Children with Special Health Care Needs a vital, forward-looking text for developmental psychologists, pediatricians, early childhood and special education researchers and practitioners, disability researchers, policymakers, and advocates, and providers for children with special health care needs.</p>

<p><i>The Environmental, Public Health, and Human Rights Impacts on Enhancing the Quality of Life of People with Intellectual Disability</i></p>

<p>2021-08-18 Laura Elisabet Gomez Sanchez Societal views on the human rights of persons with disabilities have significantly changed over the last four decades. However, while achieving equality, autonomy, nondiscrimination, participation, and inclusion should be a priority, abuses and violations of rights often occur in the most immediate environments of people with intellectual disability. This book is intended to provide greater visibility to people with intellectual disability, as full subjects of rights and improve their quality of life from a perspective of human rights, citizenship, and contextual analysis. We discuss the role of context, the provision of inclusive environments, and the improved health status at promoting quality of life-related personal outcomes and enhancing quality of life and equality for people with intellectual disability.</p>

<p>The Surgeon General's Vision for a Healthy and Fit Nation, 2010</p>

<p>2010 In the 2001 Surgeon General's Call to Action to Prevent and Decrease Overweight and Obesity, former Surgeon General David Satcher, MD, PhD, warned of the negative effects of the increasing weight of American citizens and outlined a public health response to reverse the trend. The Surgeon General plans to strengthen and expand this blueprint for action created by her predecessor. Although the country has made some strides since 2001, the prevalence of obesity, obesity-related diseases, and premature death remains too high.</p>

<p>Identification and Management of Obesity in Older Adults Living in Long-term Care</p>

<p>2019 Maria-Ann E. Holubowicz "The purpose of this study was to analyze if obesity in the older adult population living in long-term care facilities in the mid-Michigan region is as prevalent as obesity within the rest of the population. An additional focus was to identify if nurse practitioners working in long-term care facilities prescribed specialized diets to aid in weight management of the elderly. A literature review completed prior to the study indicates that obesity is increasing in the older adult population and that institutionalized older adults have an increase in BMI after living in facilities. Additionally, the literature review highlights the different measurement tools that can assist in identifying obesity. This study used a convenience sample of 64 older adults from three different long-term care facilities in the mid-Michigan region. The sample included in this study was based on the criteria of being 65 years old and older with a BMI of 30 or higher. Findings suggest that obesity prevalence in long-term care facilities is comparable to obesity rates for the rest of the United States. Also, nurse practitioners are attempting to prescribe specialized diets, however, not all facilities have the same types of diets. It is also difficult to ascertain if the diets being prescribed are based solely on BMI or due to a disease process. Limitations of the study include a small sample size and this study only looked at dietary intervention to manage obesity when there are found to be several interventions that could also be included. Future studies should be focused on larger samples, additional obesity interventions, and quality of life for the older adult." -- From page v.</p>

<p><i>Obesity Epidemiology</i></p> <p>2008-03-21 Frank Hu During the past twenty years there has been a dramatic increase in obesity in the United States. An estimated thirty percent of adults in the US are obese; in 1980, only fifteen percent were. The issue is gaining greater attention with the CDC and with the public health world in general. This book will offer practical information about the methodology of epidemiologic studies of obesity, suitable for graduate students and researchers in epidemiology, and public health practitioners with an interest in the issue. The book will be structured in four main sections, with the majority of chapters authored by Dr. Hu, and some authored by specialists in specific areas. The first section will consider issues surrounding the definition of obesity, measurement techniques, and the designs of epidemiologic studies. The second section will address the consequences of obesity, looking at epidemiologic studies that focus on cardio-vascular disease, diabetes, and cancer The third section will look at determinants obesity, reviewing a wide range of risk factors for obesity including diet, physical activity and sedentary behaviors, sleep disorders, psychosocial factors, physical environment, biochemical and genetic predictors, and intrauterine exposures. In the final section, the author will discuss the analytical issues and challenges for epidemiologic studies of obesity.</p>
