He was exhausted of his existence. He was uninterested, unhappy, and unsatisfied. He had a employment he despised, a manager he despised, and a girlfriend he didn't love. He had no enthusiasm, no goal, no significance. He felt like he was squandering his hours, his potential, his being. He desired to alter, he wanted to escape, he wished to survive. He chose to resign from his work, to break up with his significant other, to get rid of his belongings, and to acquire a one-way pass to the far end of the earth. He didn't understand where he was heading, he didn't understand what he was doing, he didn't understand what he was seeking. He only understood that he had to leave, that he had to discover, that he had to discover. Engineering Economics and Cost Estimation is a essential aspect of any engineering project. It involves present and future economic factors, making it critical to obtain dependable estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for sophisticated approaches to planning and budgeting[^2][1]. A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates[^1][2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. A number of models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating.
