Food Security in the High North 2020-09-09 Kamrul Hossain This book explores the challenges facing food security, sustainability, sovereignty, and supply chains in the Arctic, with a specific focus on Indigenous Peoples. Offering multidisciplinary insights and with a particular focus on populations in the European High North region, the book highlights the importance of accessible and sustainable traditional foods for the dietary needs of local and Indigenous Peoples. It focuses on foods and natural products that are unique to this region and considers how they play a significant role towards food security and sovereignty. The book captures the tremendous complexity facing populations here as they strive to maintain sustainable food systems – both subsistent and commercial – and regain sovereignty over traditional food production policies. A range of issues are explored including food contamination risks, due to increasing human activities in the region, such as mining, to changing livelihoods and gender roles in the maintenance of traditional food security and sovereignty. The book also considers processing methods that combine indigenous and traditional knowledge to convert the traditional foods, that are harvested and hunted, into local foods. This book offers a broader understanding of food security and sovereignty and will be of interest to academics, scholars and policy makers working in food studies; geography and environmental studies; agricultural studies; sociology; anthropology; political science; health studies and biology.

Ecosystem Services – Concept, Methods and Case Studies 2015-05-18 Karsten Grunewald Nature provides us with many services seemingly for free: recharged groundwater, fertile soil and plant biomass created by photosynthesis. We human beings draw extensive benefits from these “ecosystem services,” or ES – food, water supply, recreation and protection from natural hazards. Major international studies, such as the Millennium Ecosystem Assessment, have addressed the enormous role of biodiversity and ecosystems to human well-being, and they draw particular attention to the consequences resulting from the reduction or loss of these services. These very topical issues are being addressed by authors/scientists in a wide variety of disciplines – and their approaches, terminologies and methodological specifics are just as diverse. What, for example, does the efficacy of nature or natural capital mean? Which values of nature are particularly important, how are they distributed in space and time and how can they be assessed and the relevant knowledge promoted? Can all ecosystem services be quantified and even monetarised? What should be done to ensure that the multiple services of nature will be available also in future? This book explains the multifaceted concept of ecosystem services, provides a methodological framework for its analysis and assessment, and discusses case examples, particularly from Germany. It is addressed to scientists and practitioners in the administrative, volunteer and professional spheres, especially those who deal with environment, landscape management and nature conservation and regional and land-use planning. The target group includes experts from the business community, politicians and decision makers, students and all those interested in fundamental ecological, economic, ethical and environmental issues.

The New Arctic 2015-06-11 Birgitta Evengård In the late 18th century explorers and scientists started venturing into the Arctic in a heroic and sometimes deadly effort to understand and unveil the secrets of the unforgiving and mysterious polar region of the high north. Despite that the Arctic was already populated mattered less for the first wave of polar researchers and explorations who nevertheless, brought back valuable knowledge. Today the focus in Arctic science and discourse has changed to one which includes the peoples and societies, and their interaction with the world beyond. The image of a static Arctic - heralded first by explorers - prevailed for a long time, but today the eyes of the World see the Arctic very differently. Few, if any, other places on Earth are currently experiencing the kind of dramatic change witnessed in the Arctic. According to model forecasts, these changes are likely to have profound implications on biophysical and human systems, and will accelerate in the decades to come. “The New Arctic” highlights how, and in what parts, the natural and political system is being transformed. We’re talking about a region where demography, culture, and political and economic systems are increasingly diverse, although many common interests and aspects remain; and with the new Arctic now firmly placed in a global context. Settlements range from small, predominantly indigenous communities, to large industrial cities, and all have a link to the surrounding environment, be it glaciers or vegetation or the ocean itself. “The New Arctic” contributes to our further understanding of the changing Arctic. It offers a range of perspectives, which reflect the deep insight of a variety of scientific scholars across many disciplines bringing a wide range of expertise. The book speaks to a broad audience, including policy-makers, students and scientific colleagues.

Encyclopedia of Food and Agricultural Ethics 2014-10-29 Paul B. Thompson This Encyclopedia offers a definitive source on issues pertaining to the full range of topics in the important new area of food and agricultural ethics. It includes summaries of historical approaches, current scholarship, social movements, and new trends from the standpoint of the ethical notions that have shaped them. It combines detailed analyses of specific topics such as the role of antibiotics in animal production, the Green Revolution, and alternative methods of organic farming, with longer entries that summarize general areas of scholarship and explore ways that they are related. Renewed debate, discussion and inquiry into food and agricultural topics have become a hallmark of the turn toward more sustainable policies and lifestyles in the 21st century. Attention has turned to the goals and ethical rationale behind production, distribution and consumption of food, as well as to non-food uses of cultivated biomass and the products of animal husbandry. These wide-ranging debates encompass questions in human nutrition, animal rights and the environmental impacts of aquaculture and agricultural production. Each of these and related topics is both technically complex and involves an – often implicit – ethical dimension. Other topics include methods for integrating ethics into scientific and technical research programs or development projects, the role of intensive agriculture and biotechnology in addressing persistent world hunger and the role of crops, forests and engineered organisms in making a transition to renewable, carbon-neutral sources of energy. The Encyclopedia of Food and Agricultural Ethics proves an indispensable reference point for future research and writing on topics in agriculture and food ethics for decades to come.

Gender Regimes, Citizen Participation and Rural Restructuring 2008 Ildiko Asztalos Morell This book aims to unravel how rural gender regimes are constituted, enforced, made sense of and resisted, and how struggles of resistance lead to empowerment and change in various countries in the four corners of Europe as well as Australia and India. The book focuses on the intricate relationship between laws and institutions and everyday life. It analyzes on the one hand how laws and institutions are constituted and on the other hand how gender regimes are built at the local rural level, sometimes in compliance with these frames and sometimes contesting them. The articles, in diverse ways, give voice both to women's struggles for recognition and men's voices in gendered rural societies. Through applying the concepts of the welfare state and gender regimes within rural research, this book contributes to the further development of a comparative theoretical framework for rural gender studies. The importance of integrating rural gender studies into both the mainstreams of rural and feminist research has been emphasized in previous research, as has that of developing comparative analytical frameworks. The conceptual framework adopted in this volume sets out to meet this challenge by approaching rural gender relations as the meeting point of two core research areas: gender regimes and rural transformative processes. Research into gender regimes offers a promising analytical framework for comparing gender relations in diverse rural settings. At the same time, by addressing rural concerns deriving from the specificity of rural transition processes and gender regimes, the approach also contributes to an elucidation of the complexity of citizenship. Gendering Postsocialism 2018-03-14 Yulia Gradskova Gendering Postsocialism explores changes in gendered norms and expectations in Eastern Europe and Eurasia after the fall of the Berlin Wall. The dismantlement of state socialism in these regions triggered monumental shifts in their economic landscape, the involvement of their welfare states in social citizenship and, crucially, their established gender norms and relations, all contributing to the formation of the postsocialist citizen. Case studies examine a wide range of issues across 15 countries of the post-Soviet era. These include gender aspects of the developments in education in Kazakhstan, Uzbekistan and Hungary, controversies around abortion legislation in Poland, migrant women and housing as a gendered problem in Russia, challenges facing women’s NGOs in Bosnia, and identity formation of unemployed men in Lithuania. This close analysis reveals how different variations of neoliberal ideology, centred around the notion of the self-reliant and self-determining individual, have strongly influenced postsocialist gender identities, whilst simultaneously showing significant trends for a “retraditionalising” of gender norms and expectations. This volume suggests that despite integration with global political and free market systems, the postsocialist gendered subject combines strategies from the past with those from contemporary ideologies to navigate new multifaceted injustices around gender in Eastern Europe and Eurasia.

Its a vital component of your college education, often assigned towards the conclusion of a semester. The paper is a vehicle through which educators gauge your comprehension of the course content. Writing a term paper isn't just about summarizing facts. It requires a combination of organization, deep research, and the art of presenting your findings in a way that's both clear and analytical. This means structuring your arguments logically, citing relevant sources, and critically evaluating the information you've gathered. When grading a term paper, there are three important aspects to consider. First, the paper should be passionately written and captivating to read. Second, it should have good grammar and style (following MLA, APA, or CMS style). Third, it should be well documented with in-text references (in parentheses) linking their assertions to scholarly articles in the list of references at the end of the paper.
