A Long Way Gone 2007-02-13 Ishmael Beah My new friends have begun to suspect I haven't told them the full story of my life. "Why did you leave Sierra Leone?" "Because there is a war." "You mean, you saw people running around with guns and shooting each other?" "Yes, all the time." "Cool." I smile a little. "You should tell us about it sometime." "Yes, sometime." This is how wars are fought now: by children, hopped-up on drugs and wielding AK-47s. Children have become soldiers of choice. In the more than fifty conflicts going on worldwide, it is estimated that there are some 300,000 child soldiers. Ishmael Beah used to be one of them. What is war like through the eyes of a child soldier? How does one become a killer? How does one stop? Child soldiers have been profiled by journalists, and novelists have struggled to imagine their lives. But until now, there has not been a first-person account from someone who came through this hell and survived. In *A Long Way Gone*, Beah, now twenty-five years old, tells a riveting story: how at the age of twelve, he fled attacking rebels and wandered a land rendered unrecognizable by violence. By thirteen, he'd been picked up by the government army, and Beah, at heart a gentle boy, found that he was capable of truly terrible acts. This is a rare and mesmerizing account, told with real literary force and heartbreaking honesty.

Concepts of Biology 2018-01-07 Samantha Fowler Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Touching Spirit Bear 2010-04-20 Ben Mikaelson In his *Nautilus* Award-winning classic *Touching Spirit Bear*, author Ben Mikaelson delivers a powerful coming-of-age story of a boy who must overcome the effects that violence has had on his life. After severely injuring Peter Driscal in an empty parking lot, mischief-maker Cole Matthews is in major trouble. But instead of jail time, Cole is given another option: attend Circle Justice, an alternative program that sends juvenile offenders to a remote Alaskan island to focus on changing their ways. Desperate to avoid prison, Cole fakes humility and agrees to go. While there, Cole is mauled by a mysterious white bear and left for dead. Thoughts of his abusive parents, helpless Peter, and his own anger cause him to examine his actions and seek redemption--from the spirit bear that attacked him, from his victims, and, most importantly, from himself. Ben Mikaelson paints a vivid picture of a juvenile offender, examining the roots of his anger without absolving him of responsibility for his actions, and questioning a society in which angry people make victims of their peers and communities. *Touching Spirit Bear* is a poignant testimonial to the power of a pain that can destroy, or lead to healing. A strong choice for independent reading, sharing in the classroom, homeschooling, and book groups.

Knowing What Students Know 2001-10-27 National Research Council Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments--assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. Knowing What Students Know essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment--what students know and how well they know it--as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, Knowing What Students Know will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

The other virus called cytomegalovirus which also belongs to the family of herpes simplex causes the cells to become enlarged. According to statistics, about eighty percent of adolescents infected with this virus generally don't see any further symptoms. Although EBV has potential to develop infectious mononucleosis in adolescents the virus could make throat and blood cells its home for the lifetime. The virus has the capability to bounce back and reactive from time to time but the consolation is that it would reactivate without symptoms.

The condition usually lasts for 1-2 months. The symptoms may vary from one adolescent to other but may include inflamed lymph glands in areas such as groin, neck and armpits, fever, continuous fatigue, enlarged spleen, sore throat as a result of tonsillitis that can make things difficult to swallow and last but not the least minor liver damage that can lead to short-term jaundice. Some adolescents may also experience symptoms such as abdominal pain, petechial hemorrhage, muscle ache, headache, depression, loss of appetite, skin rash, weakness, dizziness, enlarged prostate, dry cough, swelled genitals and puffy and swollen eyes. Some parents are puzzled by the symptoms of mononucleosis as it may be similar to other medical conditions. It is safe to consult a doctor in such cases.

The viruses are usually transmitted to other people through saliva (the reason why it is also called kissing disease), blood, sharing drinks and sharing utensils. The symptoms usually lasts for 4-6 weeks and do not cross 4 months. The disease is diagnosable but requires a though medical history of the adolescent. The diagnosis also involves physical examination of the adolescent and is based on symptoms reported to the physician. The diagnosis is further supported by laboratory test like blood test, antibody test and test to count white blood cells.

#### Instruction chapter 10 1 reading guide answers biology...How does sticking needles into your body help manage the stress?

In traditional Chinese medicine, much of the treatments depend on an understanding of the balance in our bodies and its internal organs. The sicknesses we sometimes develop are seen to be caused by imbalances in our lifestyles and environment. Stress is also affected by this imbalance. That is why when there is something wrong with your body, youd typically have less of an ability to deal with stress. Youd get more irritable and find it really difficult to relax. By sticking these very thin needles past the surface of our skin, the acupuncturist stimulates nerves in our body. These nerves send signals to our brain and scientists believe that the brain then releases its natural painkillers into our system. This immediately causes a feeling of relaxation for many people.

The needles could also help your body by stimulating its circulation. With the circulation between the organs of the body improved, a lot of the bodys wastes could be cleansed properly. Your organs would also receive the full benefit of the oxygen from your lungs making its way into the cells of your body without any blockages. This makes your organs much healthier and leaves you feeling much better in the long term as well.

But you have to remember that acupuncture is not permanent. It merely starts something that you have to finish on your own. Some smokers who go 2 or 3 times a week to the clinic will need to come back for follow up sessions in the future. At the same time, you have to find ways to prevent yourself from picking up a cigarette. You can do this by staying away from people who smoke since you will be tempted to ask for a stick. You can create your own personal mantra which you repeat to yourself every time you have an urge.

Remember that this craving is only short term and will last only for a few minutes. You have worked so hard to leave this behind so stick to the path and stay smoke free.

It might not be something to replace regular trips to the doctor but with its many possible benefits, acupuncture might be worth trying out very soon.

Part of the curriculum will also include basic courses in traditional medicine covering subjects such as anatomy, biosciences, medical terminology, herbal medicine, moxibustion, and acupuncture. In some schools, they may require students to also learn about nutrition and various kinds of research.

Once they graduate, they may start in an entry level position earning \$40,000 or more which will soon double or triple after years of experience and working themselves up the ladder.

If you want to look for a school that offers acupuncture degrees, it is best to go online and see which one has the best program that suits your requirements.

#### Menstrual Disorders in Adolescent Girls

Adolescence is the time when there is sudden transformation in the body and many questions arises in the minds of the adolescents. Firstly they are not able to cope with the changes and secondly the changes bring along problems with them. The most challenging problems are related to menses, in girls. Menstrual conditions are many that may require physician's attention or any other healthcare professional's attention. The most common of the menstrual disorders are premenstrual syndrome, dysmenorrheal and amenorrhea.

Before the onset of the menses, females face many uncomfortable symptoms which last for a short period, stretching from few hours to few days. But some of them can be very intense and can disturb the normal functioning of the person. These symptoms are grouped as premenstrual syndrome. In usual cases, the symptoms come to a halt when the menses begin, but for some they may last even after the menstrual periods are over. Eighty five percent of the females experience some of the

symptoms of premenstrual syndrome at one time or the other. Nearly forty percent experience the symptoms so intensely that their daily chores are affected by it and ten percent are disabled by it.

*Lolita chapter 10 1 reading guide answers biology*-An infant will have a normal blood pressure reading of 80/45, where as an adolescent will have a normal blood pressure reading of 110/70. Therefore, age, gender, and height are important factor when determining the normal blood pressure level. Adults will have a higher blood pressure than the infants and teenagers. Also, boys have a higher blood pressure when compared to girls and tall people have a higher blood pressure than short people. An adolescent is said to have high blood pressure when the blood pressure is more than the blood pressure of ninety percent people of his/her age, gender and height. There are many risks associated with hypertension or high blood pressure. The risk of developing coronary heart disease increases proportionally. The arteries will develop greater resistance towards the blood flow, because of which the heart will pump blood harder. Stroke is also another risk. Adolescents who have had high blood pressure as a child, develop harmful effects on the blood vessels and heart till the time they turn twenty. The causes of high blood pressure can be classified as primary and secondary. If the causes are definite, they are primary and if the cause is linked to some illness, it is secondary. Primary causes are high blood cholesterol levels, smoking, stagnant lifestyle and overweight. Secondary causes are obesity, immobility due to chronic illness, prescription drugs, intense pain due to burns or cancer and illegal drugs. High blood pressure can develop due to hereditary reasons.

##### Consulting with a Professional Acupuncturist

There are a number of acupuncture practitioners in existence nowadays, offering a host of services. If you are considering this form treatment for your weight management, make sure that you settle with no less than a trained and professional acupuncturist. A poorly trained acupuncturist may not be able to pinpoint the specific meridian points and worse, may cause unnecessary bodily pain and discomfort.

Moreover, your acupuncturist may require an herbal supplement for your treatment, to encourage a longer-term effect. Your sessions need not be maintained for an extensive period; however you may be required to visit your acupuncturist during the entire course of the sessions.

There are other means for losing weight successfully, and this does not include crash dieting and strenuous work outs. If carried out by trained professionals, acupuncture can be the answer for effective weight management. While it is far from being a cure-all, it may just be the right weight loss solution for you.

**chapter 10 1 reading guide answers biology**\_\_Periodontal disease can be diagnosed by a dentist or a periodontist after reviewing the complete medical history and also physical examination of the teenager's mouth. Usually x-ray of the teeth is taken to evaluate the disease. Periodontal disease is classified into different types based on what stage the disease is in. The mildest form of gum disease is known as "gingivitis" in which gums become swollen, red and tender resulting in bleeding while daily brushing and flossing. Gingivitis is again divided into 4 groups primarily acute, sub-acute, recurrent and chronic. Acute gingivitis is nothing but sudden appearance which lasts for shorter duration and could be painful. Sub-acute gingivitis is less severe type of gingivitis. Recurrent gingivitis is the one that comes back after treatment. Chronic gingivitis is the one that onsets slowly, lasts longer and is generally painless. A dentist's treatment and proper and continuous care can easily solve the problem of gingivitis but if left untreated could result in periodontitis.

Periodontitis is further classified into mild and moderate to advance. Periodontitis results from untreated gingivitis. In this stage the deterioration of the bone in the vicinity of the tooth becomes evident. The common symptoms include red gums that bleed; mouth tastes bad; loose teeth; tooth loss. Proper treatment is a must to control the disease and prevent further deterioration. Periodontitis which is in moderate to advanced stage shows signs of major loss of tissue and bone loss near the teeth.

There are various treatments available for periodontal disease which is decided by the dentist depending on teenager's age, medical history and health in general. The method of treatment also depends on the extent to which disease has reached. The tolerance of the teenager to certain medicines, therapies and procedures are also taken into consideration. Expectations and opinion of the parents or teenager is also the criteria in deciding the type of treatment. The treatment usually involves plaque removal, medication and in worse cases a surgery.

OCD is a sign of brain circuitry's unusual functioning and it involves the striatum part of the brain. The brain activity patterns of such people differ from normal people and people with other mental disorders. Researchers have concluded that OCD is usually a family problem and is a disorder of the brain. Streptococcal bacterial infection can create or worsen the condition of OCD. Adolescents with no family history of OCD can also develop it. Most of the adolescents feel embarrassed to talk about their OCDs. They think that people will label them as crazy and this will make them feel ashamed. This will make it difficult for the parents to talk to their children about their OCD, in order to solve them. Parents need to develop good communication skills for this purpose. Parent's support is also very important to the adolescent. Cooperation is extremely important along with treatment, because if the problem is not treated the adolescent will grow into a disturbed adult.

Most of the adolescents with OCD can receive effective treatment. The treatment can include psychotherapy and intake of medications such as fluoxetine, clomipramine, fluvoxamine, paroxetine, sertraline and other serotonin reuptake inhibitors. When OCD is caused due to streptococcal infection, the adolescent can be administered with antibiotics to kill the bacterium which is causing it. Exposure and response prevention behavioral therapy is very useful in solving OCD.

In this therapy, the adolescent is wotently exposed to his/her fears which give him/her obsessive thought. After that he/she is trained to avoid these thoughts and the rituals which he/she carries out to tackle the anxiety.

An adolescent having OCD can also have depression, substance abuse, attention deficit hyperactivity disorder, eating disorders, and other types of anxiety disorders. When a person with OCD and other mental illness, is treated, OCD becomes more difficult to treat and even diagnose.

Depression in adolescents is a disorder which occurs due to persistent sadness, loss of interest, loss of self worth and discouragement. Depression is normally a temporary reaction towards situations of stress. Depression is a normal part of the maturation process of adolescents. It is even induced due to production of sex hormones. Adolescent females are depressed twice more than adolescent boys according to a study.

Adolescent behavior is normally marked with good and bad moods. The transition from a good mood to bad mood and vice-versa, can take minutes, hours and even days. That is the reason why true depression is very difficult to find out.

Precautions should not only be taken indoors, but outdoors too. This is because; more than forty thousand people get eye injuries outdoors. Ninety nine percent of the injuries are caused while playing sports. So it is necessary for the youngsters to wear protective eyewear while playing sports or when involved in outdoor recreational activities. A special helmet is designed with wire shield or polycarbonate face mask which is not only safe, but comfortable, too. Protective eyewear should also be worn while performing experiments in science lab. Fireworks must only be handled by adults.

Because of increasing use of computers, more and more youngsters are getting eye strains. The symptoms of eye strain caused by computer are red & watery eyes, focusing problems, aching & tired eyelids, eye muscle spasm, backache and headache. In such an environment, eye exercise must be done regularly. The eyes must be made to focus on distant objects and should be rotated from side to side. It is extremely important to give ample rest to the eyes. Glasses with UV shield must be worn when looking at the computer screen. Eye strain can be avoided by increasing the distance from the monitor.

Eye hazards are also caused when cosmetics are used improperly by contact lens wearers. Some of the adverse reactions are injury, eye irritation, allergy, dryness, infection, and lens deposition. That is the reason why adolescents must be made aware of the risk they will face when opting for contact lens. Girls should understand that they should buy hypoallergenic cosmetics and especially the non-scented variety, manufactured by big brand names. Cosmetics should not be shared with anything else. The applicator brushes must be washed regularly and old mascara must be disposed and not refilled. Eye shadows which are glittery, pearlized, frosted or iridescent contain ground tinsel or oyster shell, which should be always avoided. Eyeliner should not be applied in the inner lid edge. Loose powder should be avoided. Cream should not be applied near the eyes. The wearer should wash hands while handling contact lens. No crying, washing of face or bathing should be done with the contact lens on.

**The Best chapter 10 1 reading guide answers biology**,Eating disorders not only result in physical abnormalities, but also psychological abnormalities. Adolescents with eating disorders take onto social isolation, low self esteem, affective disorders, low self concept, substance abuse, anxiety, and depression. Usually adolescents switch to unhealthy eating habits because of depression and lack of knowledge about affective techniques to lose weight. So the patients who are being treated for eating disorders must also be treated for psychiatric illness, if they have any. Even if the habits doesn't fit the strict criteria, adolescents who limit food intake, binge, vomit or purge accompanied with or without harsh weight loss, should be monitored because of the involvement of risk of even death. Early treatment will have an improved outcome. But the level of intervention in adolescents should be less when compared to adults.

##### Eye problems and injuries in Adolescents

Every year more than one million people get eye injuries, out of which ninety percent are preventable if safety eyewear is used. One hundred and twenty five thousand eye injury cases are caused by household products.

It is a good habit to wash hands regularly, especially after handling household chemicals. When using detergents and hazardous solvents, the handler must wear chemical safety goggles. Also, no children must be around while handling chemicals. While spraying, the nozzle must be turned away from the face. Fertilizers, pesticides and paints must be stored away from reach. While doing household activities proper protective gears such as goggles, gloves, boots and helmet should be worn, if required. The house must be illuminated adequately to avoid accidents in the dark. Stairs should also be illuminated and the rails must also be installed. The instructions for opening the tops of bottles must be read carefully to avoid them from popping and injuring other people. Children and adolescents should read instructions before handling operating equipment before playing games. All power equipment must be installed with guards. While playing outside, the eyes must be protected by UV protective goggles and it is a bad idea to look at the sun directly.

#### Study case chapter 10 1 reading guide answers biology

When adolescents wear braces they have to take certain precautions in order to avoid any more oral health complications. The most important precautionary measure is to brush the teeth regularly after every meal. Since the food can be easily lodged in braces, it is a good idea to brush carefully with soft bristles toothbrush and fluoride toothpaste. In the morning, the adolescent must floss between the braces and teeth. Food stuffs which are sticky or hard must be avoided as they are very difficult to remove. Foods like caramel, chew candy, popcorn, and nuts must be avoided. Cleaning must be done by the orthodontist or general dentist, every five to six months.

The wisdom teeth or third molars can grow in people of the age fifteen to twenty five. These teeth cause problem, because most of the mouths are too small to adjust new teeth and hence they need to be removed. If the wisdom tooth has place to grow, without affecting other teeth, they can be left to themselves. But if the adolescent experiences pain, facial swelling, mouth infection and gum-line swelling, then they should be extracted immediately. They can also destroy the second molars and impact other tooth. Various gum and jaw diseases can be caused. There can be a tumor development; cysts development and plaque build up. Hence, a surgery is performed to remove the tooth or teeth. The gum tissue covering the wisdom tooth is removed and the connective tissue connecting the tooth to the bone is detached. The tooth is then removed and the opening is sutured. A general dentist can perform wisdom tooth surgery in the local office using anesthesia.

Five times common than asthma is tooth cavities. The tooth above the gum line is made up of enamel, the hardest tissue within the human body. The tooth below the gum-line comprise of nerves, roots and dentin. Dentin is another type of tissue and isn't as hard as the enamel. The acid which leads to tooth decay is produced by bacteria. These acids, along with dietary sugar, attach the enamel and eat away the minerals within the enamel, until a cavity is formed. This is known as tooth cavity. The biggest prevention against dental cavities is brushing teeth twice a day and even better, after every meal with fluoride toothpaste and soft bristle toothbrush. Carbonated drinks must be avoided strictly and must be replaced with fruit juices and sugary food must be avoided. Intake of fluoridated water also helps a lot or fluoride supplements can be used as replacement.

These needles will be kept in place for 30 to 45 minutes depending on how much support is needed. These are then removed and replaced with ear tacs with adhesives to make sure they are in the same spot as the needles.

These ear tacs work by applying mild pressure whenever he or she feels hungry. It causes a mild endorphin release and helps the patient relax making it possible to use their willpower and resist the temptation to eat.

The patient will also have to reduce cravings on certain food by cutting down the intake. Some studies suggest that this can also lower insulin levels or lipid levels in the blood.

**A Quick-Start guide to Acupuncture**

Using needles to adjust bodily functions to optimum levels is the principle behind acupuncture. Both ancient Chinese and modern Western practitioners have used this technique to relieve many sufferers of chronic disease. Needling is a relatively safe, beneficial treatment strategy that can be used to reduce pain, improve healing, and increase general well-being. But exactly how is this procedure done and what sort of benefits can be obtained?

Procedure for Needle Puncture

There are two broad categories of acupuncture practice today, traditional Chinese medicine (TCM) and medical acupuncture. Both have their merits, so the choice is individual. The decision for most people hinges upon which philosophy appeals more to them and which technique holds the least apprehension.

Acupuncture is a form of holistic healthcare that uses needles to help treat a patient. Unlike the cartoon where the balloon will pop and all the air will go out, the needles that are inserted into the vital points will stimulate the body to release endorphins thus helping the person control their appetite.

But before needles are inserted, the specialist will first ask the patient some questions and perform an examination. This is needed to understand the main cause for the person to be overweight.

**Acupuncture and Autism**

Studies have shown that there is an increase in the number of children that have been diagnosed with autism. Until now, doctors have not yet found a cure to this illness which is why some parents want to experiment with alternative forms of treatment and one example is acupuncture.

Acupuncture is a holistic approach in treating and preventing certain diseases. Its main tool are very thin needles that are inserted to targeted points in the body. The body has about 400 of them linked through a system known as meridians or pathways. Once these are stimulated, these are supposed to create balance in the body.

Autism on the other hand is a brain disorder that is long term. This disease is characterized by deficits in language, social communication and cognition. Children who are diagnosed with this illness may also suffer from secondary problems such as aggression, irritability, stereotypes, hyperactivity, negativism, volatile emotions, temper tantrums, short attention span and obsessive-compulsive behavior.

But acupuncture only reached the US in the early 80's with the establishment of a regulatory board called the National Commission for Acupuncture and Oriental Medicine. As a result, various schools have been built and those who want to become licensed acupuncturists are now able to practice their profession.

Despite that, there were a lot of people who are not yet convinced of the positive effects of alternative forms of medication. It was only in 1995 that the US Food and Drug Administration decided to classify the needles used for acupuncture as medical instruments and assured the public that they are both safe and effective.

To further promote acupuncture, the NIH or National Institute of Health in 1997 has stated that this technique is very useful in treating various health conditions. These include ear, nose, throat, respiratory, gastrointestinal, eye, nervous system and muscular disorders. In some cases, acupuncture is able to prevent some of them from happening.

**Legend chapter 10 1 reading guide answers biology...** The profit & loss of a certain company is determined by finance professionals through accounting. They can determine what created the profits as well as the losses. Accountants form some sort of business equation so justify the profits & losses of a business. By doing so, they can easily tell a company's net worth.

It seems that by simply starting to define one accounting term, it eventually leads to defining other terms as well. Net worth is another term that is quite difficult to understand. It refers to the resulting amount after deducting the liabilities of a company from the assets. Private companies refer to net worth as owner's equity.

Why owner's equity? Well, after deducting all the liabilities, what's left basically belongs to the owner. In the case of public companies, the profit of the business is returned as dividends to shareholders. As you can see, before owner or shareholders of a company can take hold of the profits, all liabilities must be deducted first.

Acupuncture comes from two Latin words namely "acus" which means needle in English and "pungere" which means prick. Its history originated in China more than 2000 years ago and has evolved into various forms.

Some of the techniques of acupuncture do not even use needles anymore. Vibrating objects, ultrasound and even the fingers of the practitioner have taken some of the work to make the person feel better.

**Obsession chapter 10 1 reading guide answers biology**—In TCM, practitioners adhere to the concept of Qi, or energy flow, and the meridians in which they travel. They use longer needles and insert them deeper in order to reach the acupuncture points. Modern science has found little evidence to prove the existence of these energy channels, but this is the technique that has been used effectively for thousands of years.

In medical acupuncture, the practitioners are graduates of western medical schools. Their application of needles is not based on the traditional acupuncture points, but on anatomic data. These acupuncturists use shorter needles and the insertions are shallower. They also tend to use fewer needles and leave them inserted for shorter periods of time. Adherents to TCM feel this is a watered-down version of the real thing. Nevertheless, many patients have felt relief of symptoms through this method.

Conditions for Puncture Application

There is a broad and extensive list of ailments which can be treated with acupuncture. The conditions run the gamut from asthma to constipation, anxiety to weight loss. Most TCM practitioners believe that any health condition results from an imbalance in Qi flow, therefore amenable to needle therapy. Western acupuncturists tend to have a more limited list of indications, the most common of which is undoubtedly control of pain.

**History chapter 10 1 reading guide answers biology**

A course of acupuncture therapy will last anywhere from a few weeks to a few months. This depends upon the complexity of the particular medical condition. Results also vary, so it is important to have a frank discussion with the acupuncturist regarding expected results and their time frame. In general, the patient will begin to feel beneficial effects after three or four sessions. Certain specific conditions will actually get a little worse before improving so keeping informed is key.

In modern medicine, the use of traditional techniques with proven results has become a widely accepted practice. Acupuncture has proven its worth time and again. Modern practice guidelines make it effective, reproducible, and safe. It is a gift of healing from ancient sages that has the potential to bring relief to millions of people.

Preliminary studies have shown that acupuncture may provide symptomatic relief to children suffering from autism. Although difficult at first, it is believed that it is rewarding in the long run. This is because while conventional therapy and treatment requires that the child stay still, acupuncture doesn't. Some say it's a quick prick at the vital points in the body.

Seventy four percent of females above fourteen years and sixty percent of females below fifteen years have reported to have involuntary sex. Fifty percent of the adolescent pregnancies are within the time period of six months after the initial sexual intercourse. More than nine hundred thousand teenagers are reported to have become pregnant every year in the United States. Fifty one percent of the adolescent pregnancies result in live birth, thirty five percent result in induced abortion and fourteen percent result in stillbirths or miscarriages. Four out of ten adolescent females get pregnant, before they turn twenty, at least once. Twenty five percent of adolescent deliveries aren't the mother's first child. When a teenager gives birth to her first child, she increases the risk of begetting another child. One third of the adolescent parents are themselves result of adolescent pregnancies.

There are many reasons why adolescents choose to become sexually active at an early stage in life. The reasons can be early pubertal development, poverty, sexual abuse in childhood, lack of parent's attention, lack of career goals, family and cultural patterns of early sex, substance abuse, dropping out from school and poor school performance. Factors which discourage an adolescent to become sexually active are stable family environment, parental supervision, good family income, regular prayers, connectedness with parents and living with complete family and both the parents. The factors which are responsible for the consistent use of contraceptive among adolescents are academic success, anticipation for successful future, and involvement in a stable relationship.

There are many medical risks associated with adolescent pregnancies. Adolescents who are less than seventeen years are at a greater risk of developing medical complications, when compared to adult females. The risk is even more in teenagers below seventeen. The weight of the child, given birth by an adolescent, is very low in these pregnancies. It is usually below 2.5 kilogram. The rate of neonatal birth is also three times greater in adolescents, when compared to adults. Other problems caused by adolescent pregnancies are prematurity of the child, birth of underweight child, poor maternal weight gain, poor nutritional status, anemia, STDs and hypertension induced due to pregnancy.

If, like me, you have quite a fear of needles and injections, then acupuncture, that practice of sticking needles onto different parts of your body to cure sicknesses might seem scary at first.

However, if you've been long been suffering from some problems like headaches or chronic pains and your regular visits to the doctor don't seem to be helping you, then why not consider a trip to an acupuncture specialist? After all, who hasn't heard of somebody's aunt somewhere suffering from arthritis and trying out everything that the doctors recommended all to no avail, only to finally be cured by a really good acupuncturist?

Perhaps you were wondering if it could actually work for you. You might feel a bit skeptical since traditional Chinese medicine doesn't immediately coincide with theories in modern Western medicine. In fact, the use of needles to cure people was discovered thousands of years ago in China long before microscopes or x-ray machines were invented or before bacteria and germs were discovered.

**Power chapter 10 1 reading guide answers biology**—Unfortunately, standards of acupuncture have not been fully approved by the FDA due to many unregulated practices that still exist such as the re-use of needles. Furthermore, acupuncture certification today is mostly a sham, used to make money on desperate patients who have not benefited from western medical treatments. The National Council Against Health Fraud has even declared acupuncture as an unproven means of treatment whose concepts of healing are primitive and false.

**Should You Try It**

One thing that Western science can agree upon is that there are no proven harmful effects of acupuncture. Many doctors agree that as long as a medication is not detrimental to one's health, then there is no reason why it should not be used if there are noticeable benefits. Most scientists would also state that it is simply due to a lack of research that the therapeutic properties of acupuncture have not yet been proven.

Holistic healthcare by definition is being able to cure an illness through the use of alternative means. This means no medication is given to the patient and an instrument like a bunch of needles could do the trick.

Acupuncture has been around for more than 2000 years. It is only recently that this holistic form of healthcare has reached the US. Studies have shown that it can treat minor problems and prevent some from happening.

The needles used in acupuncture are very thin but thicker than human hair. This makes it smaller than those used on hypodermic needles.

**Acupuncture in the Western World**

One of the most debated issues between the East and the West is the use of acupuncture as a western means of medical treatment. Even though this form of medicine has been used as an effective method for over five thousand years in China, there is no concrete evidence from scientific research studies that have proven the healing properties of acupuncture.

Skeptics shrug off the positive effects of acupuncture as merely placebo effects. Believers in acupuncture, however, say that the benefits have simply not yet been proven. Believers promote that the treatment is harmless and can be used as a complement to western medicine.

**Legend chapter 10 1 reading guide answers biology:Acupuncture Can Help You Quit Smoking**

Smoking is one hard habit to break. If nicotine patches and gum doesn't work, perhaps you should try something else like an alternative form of healthcare like acupuncture.

Acupuncture is an ancient practice involving the use of needles. This instrument is inserted into the skin to allow you energy or Qi to start flowing freely around your body and thus help you quit smoking.

When you go visit an acupuncturist for the first time and tell him or her that you want to quit smoking, after answering some questions, the specialist will carry out an examination of your ears and search for areas where the energy is low.

**Acupuncture Closely Revealed**

The foundation of acupuncture rests on the relevance of an individual's chi in maintaining bodily and mental health. It is believed that chi is present in every living creature, and flows through specific pathways in the body. Health

problems arise when the flow of chi on the body is blocked. As a result, a person may feel persistent headaches, muscle pain, fever, weakness, or in the worst case, becomes afflicted with more serious health conditions.

A Deeper Explanation of Acupuncture

Acupuncture has its origins in ancient Chinese philosophy and practice. More than ten thousand years ago, during the Old Stone Age of China, stones were fashioned into knives for medical purposes. After several years, during the New Stone Age, these stones were eventually made into needles intended for the same therapeutic end. These accounts are further evidenced by unearthened stone needles found to be of the same types used during the New Stone Age.

There is also auricular acupuncture where it is believed that the ear is a microcosm of the body. This means that acupuncture needles are placed on certain points on the ear so it can treat certain addiction disorders.

Myofascially-based acupuncture is often utilized by physical therapists as it involves feeling the meridian lines in search of tender points before applying needles as this is where abnormal energy flows.

Japanese styles of acupuncture referred to as "meridian therapy," tend to put more emphasis on needling technique and feeling meridians in diagnosis.

Collection of pieces of evidence is very important and also its documentation. Courtroom proceedings use the documented papers. Aside from that, forensic accountants also prepare the needed reports for the effective management of the concerned company or enterprise and reports for the litigation parties or agencies. In court proceedings, forensic accountants testify to provide depositions based on their findings.

Various agencies and companies hire the services of forensic accountants. Most of them are included in the agency staffs of law enforcements and criminal investigations. Criminals are prosecuted based on the money trail tracked by the accountants. CPA firms also have available forensic accountants in their staff to assist partnership and shareholder disputes, employee theft or fraud, business loss, and issues of professional negligence. Insurance companies also hire the services of forensic accountants to investigate some insurance claims.

If acupuncture works for you, then the only thing you need are follow up sessions. This can be done twice every 2 weeks or monthly. It is really up to you. But don't forget to also see your regular doctor so he or she can also monitor the progress of your condition.

**Types of Acupuncture**

There are different types of acupuncture. Whichever you decide to use, they are designed to do the same thing and that is to relieve pain or treat certain diseases.

**Power chapter 10 1 reading guide answers biology.**...The number of treatments you will need depends on the patient's condition. On average this could be from 10 to 5 treatments and 2 to 3 times a week. How much it will cost also varies as this could be from \$40 to \$150. Some insurance companies and HMO's now cover that or partially so you should check if this is included in your policy.

Anyone can try acupuncture to relieve pain or prevent one but many practitioners decline to see someone during pregnancy. But if you have already started, it is generally safe to do so until the infant is born.

Some acupuncturists may ask you to take in some herbs as part of the treatment. Since you have no idea what it can do, have this checked first by your local doctor to make sure this is safe as this could interact with the drugs you are taking causing side effects.

The licensing requirements for accountants vary from state to state. This is a very important consideration when choosing a degree program in accounting. Before you can take the exams to become a CPA, you will need a 150 hours course. By 2009, almost all the states in the US will follow the same requirements.

**observation chapter 10 1 reading guide answers biology.**...The earliest account of this is found in the book called Nei Jing which in English means the Yellow Emperor's Classic of Internal Medicine. The contents of this book date somewhere around 200 BC. Back then, they did not use metal needles and instead used those made out of stone, moxibustion and herbs to treat a patient.

Acupuncture prevents and treats diseases by inserting very fine needles into the skin specifically at the anatomic points of the body.

The principle behind this concept is that illnesses occur because there is an imbalance in your life force otherwise known as Qi. It is believed that this flows in 14 channels in the human body known as meridians which branch out to bodily organs and functions. If there is a blockage or obstruction in any of them, this is when you succumb to a disease or an illness.

Impulses of electromagnetic energy are used because our bodies generate tiny but electrical discharges which influence the function, growth and maturity of certain types of cells. By inserting the needles in these areas, it stimulates and alters the neurotransmitters in the body thus making the patient feel better after treatment. This is also sometimes used for diagnosis and testing.
