Understanding Earth's Polar Challenges Igor Krupnik 2011-01-01 The International Polar Year (IPY) 2007-2008 co-sponsored by ICSU and WMO became the largest coordinated research program in the Earth's polar regions. It involved a large range of disciplines, from geophysics to ecology, also embracing human health, social sciences, and the humanities. All IPY projects included partners from several nations and/or from indigenous communities and polar residents' organizations. An estimated

50,000 researchers, local observers, educators, students, and support personnel from more than 60 nations were involved in the 228 international projects (170 in science, 1 in data management, and 57 in education and outreach) and related national efforts. IPY generated intensive research and observations in the Arctic and Antarctica over a two-year period, March 1, 2007-March 31, 2009, with many activities continuing beyond that date. IPY 2007-2008 generated much anticipated momentum with substantial funding for research and monitoring activities, new observational and analysis technologies, integrated system-level approaches, and a broadened circle of stakeholders. It introduced new research and organizational paradigms that will have a lasting legacy of their own. It showed the power of integrative vision, and consolidated new trans-disciplinary approaches.

Impacts of Invasive Species on Coastal Environments

Christopher Makowski 2018-08-07 This book focuses on the global threats to coastal environments from invasive, non-native species and examines how these alien biological species adversely alter landscapes and socioeconomic conditions as well as the psychological attitudes and perceptions of local inhabitants and tourists. Designed for the professional or specialist in marine science, coastal zone management, biology, and related disciplines, this volume appeals to those not only working directly with invasive flora and fauna species, but also those individuals involved in a wide array of coastal related fields. Examples and case studies of coastal invasive species are drawn from many different geographic areas worldwide, including North and South America, Europe, Oceania, the Caribbean, Southeast Asia, and Africa.

Bulk Material Handling Michael Rivkin Ph.D. 2018-09-15 Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case

studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
