neuroscience, and many other disciplines. It explores how affective factors influence interactions between humans and technology, how affect sensing and affect generation techniques can inform our understanding of human affect, and on the design, implementation, and evaluation of systems that intricately involve affect at their core. The Oxford Handbook of Affective Computing will help both new and experienced researchers identify trends, concepts, methodologies, and applications in this burgeoning field. The volume features 41

chapters divided into five main sections: history and theory, detection, generation, methodologies, and applications. Section One begins with a look at the makings of AC and a historical review of the science of emotion. Chapters discuss the theoretical underpinnings of AC from an interdisciplinary perspective involving the affective, cognitive, social, media, and brain sciences. Section Two focuses on affect detection or affect recognition, which is one of the most commonly investigated areas in AC. Section Three examines aspects of affect generation including the synthesis of emotion and its expression via facial features, speech, postures and gestures. Cultural issues in affect generation are also discussed. Section Four features chapters on methodological issues in AC research, including data collection techniques, multimodal affect databases, emotion representation formats, crowdsourcing

techniques, and machine learning

approaches, affect elicitation techniques, useful AC tools, and ethical issues in AC. Finally, Section Five highlights existing and future applications of AC in domains such as formal and informal learning, games, robotics, virtual reality, autism research, healthcare, cyberpsychology, music, deception, reflective writing, and cyberpsychology. With chapters authored by world leaders in each area, The Oxford Handbook of Affective Computing is suitable for use as a textbook in undergraduate or graduate courses in AC, and will serve as a valuable resource for students, researchers, and practitioners across the globe.

The Semantic Web: Research and Applications

Lora Aroyo 2010-06-03 This volume contains papers from the technical program of the 7th Extended Semantic Web Conference (ESWC 2010), held from May 30 to June 3, 2010, in Heraklion, Greece. ESWC 2010 presented the latest results in research and applications of Semantic Web technologies. ESWC 2010 built on the success

of the former European Semantic Web Conference series, but sought to extend its focus by engaging with other communities within and outside Information and Communication Technologies, in which semantics can play an important role. At the same time, ESWC has become a truly international conference. Semantics of Web content, enriched with domain theories (ontologies), data about Web usage, natural language processing, etc., will enable a Web that provides a qualitatively new level of functionality. It will weave together a large network of human knowledge and make this knowledge machine-processable. Various automated services, based on reasoning with metadata and ontologies, will help the users to achieve their goals by accessing and processing information in machine-understandable form. This network of knowledge systems will ultimately lead to truly intelligent systems, which will

Research about Web semantics can benefit from ideas and cross-fertilization with many other areas: artificial intelligence, natural language processing, database and information systems, information retrieval, multimedia, distributed systems, social networks, Web engineering, and Web science.

Experiment and Evaluation in Information Retrieval Models K.

Latha 2017-07-28 Experiment and Evaluation in Information Retrieval Models explores different algorithms for the application of evolutionary computation to the field of information retrieval (IR). As well as examining existing approaches to resolving some of the problems in this field, results obtained by researchers are critically evaluated in order to give readers a clear view of the topic. In addition, this book covers Algorithmic Solutions to the Problems in Advanced IR Concepts, including Feature Selection for Document Ranking, web page classification and recommendation, Facet Generation for Document Retrieval, Duplication Detection and seeker satisfaction in question answering community Portals. Key features: Focusing on recent topics in Information Retrieval research, Experiment and Evaluation in Information Retrieval Models explores the following topics in detail: Searching in social media Using semantic annotations Ranking documents based on Facets Evaluating IR systems offline and online The role of evolutionary computation in IR Document and term clustering, Image retrieval Design of user profiles for IR Web page classification and recommendation Relevance feedback approach for Document and image retrieval

Populism and Neoliberalism

David Cayla 2021-03-22 Populism and Neoliberalism argues that the roots of populism lay in the contradiction between the democratic ideal, which implies that the people should decide, and neoliberal governance

which seeks to make markets and competition the arbiters of major social developments. Neoliberalism is not the product of a clearly conceived ideology but rather a set of doctrines based on a few major principles which have been embraced by decision-makers of all kinds with little reassessment along the way. In practice, a certain art of governing that exploited an economic thinking insensitive to social complexity gradually imposed itself by being wrongly identified as the successor to liberalism. The rise of populist movements poses a significant challenge to liberal democracies, yet the causes of these movements remain beyond the understanding of experts. The explanation of populism is often limited to a mere political analysis.

Contrary to that, this book investigates the economic and social dynamics of the free-market system and explains how populism emerges from its imbalances. It also aims to explain the emergence of the neoliberal doctrines during the 1970s and to characterise their

common features. In light of this, it explores how the rise of inequality and social discontent create a pressing duty to develop another model, and argues that we must now rethink our policies in depth in order to respond to the challenge of authoritarian populism. This book marks a significant intervention in the debate about the rise and fall of neoliberalism. Its analysis of the links between the failings of neoclassical economics and the failings of neoliberal politics provides essential reading for anyone interested in the damaging impact of neoliberalism, the failings of neoclassical economics, and explanations for the rise of populism.

TEACHING AND LEARNING WITH EMERGING TECHNOLOGY: A

Future Perspective Dr. P. Muthukumar This edited book focuses on the possible education responses that can be implemented in future education times. evaluations of educational technologies including emerging technologies. Besides, it also shows how emerging technologies, including Artificial Intelligence, Blockchain, Educational Games and Virtual Reality/Augmented Reality, will reshape the future of education to provide efficient learning/teaching experiences and assessments. Furthermore, the book discusses innovative teaching and learning approaches (e.g., the use of open educational practices and peer-to-peer learning) that can be applied in this rapidly moving technological era to maintain education, including in unconditional times.

Particularly, new instructional methods, such as game-based learning, should be designed based on integrated technologies to provide an effective learning experience, resulting in better learning outcomes. Future education should not solely focus on technology and psychology, but also on the applied instructional methods, as well as the human touch to maintain

effective learning experiences. The book also discusses how teaching and learning can be designed to meet the growing tendency of Open and Distance Education, where thousands of learners can be taken the same course from different cultures, backgrounds and learning needs. This book aims to establish itself, through the published books/textbooks and research, as a medium to provide guidelines and recommendations for different stakeholders, including policymakers, educational designers, teachers, and students on how to enhance both learning and teaching experiences in the future for better learning outcomes, as well as how to maintain education in emergency times. It also provides one step ahead towards future education to prepare different stakeholders for the rapid evolution of education, even in times of emergency and difficult situations.

presented and discussed during the Research & Innovation Forum (Rii Forum) 2022. As such, this book offers a unique insight into emerging topics, issues and developments pertinent to the fields of technology, innovation and education and their social impact. Papers included in this book apply inter- and multi-disciplinary approaches to query such issues as technology-enhanced teaching and learning, smart cities, information systems, cognitive computing and social networking. What brings these threads of the discussion together is the question of how advances in computer science – which are otherwise largely incomprehensible to researchers from other fields – can be effectively translated and capitalized on so as to make them beneficial for society as a whole. In this context, Rii Forum and Rii Forum proceedings offer an essential venue where diverse stakeholders, including academics, the think tank sector and decision-makers,

Kalavathy Operations Research is the discipline of applying advanced analytical methods to help make better decisions. It helps the management to achieve its goals by using scientific techniques, making the study and understanding of operations research even more important in the present day scenario. This book has been written with the objective of providing students with a comprehensive textbook on the subject. It follows a simple algorithmic approach to explain each concept, often giving different steps. This approach stems from the author's experience in teaching undergraduate and postgraduate students of Madras University and Anna University, Chennai, over many years. One of the highlights of this book is the solved-problems approach, as each

30 April, 2015. If this is your first time to New Delhi, you need to look on more objects which you could never forget in your lifetime. There is much to see and experience at The National Capital of Republic of India. The concept of Inter Disciplinary research was a topic of focus by various departments across the Engineering and Technology area. Flushing with major areas, this ICIDRET '15 has addressed the E&T areas like Mechanical Engineering, Civil Engineering, Electrical Engineering, Bio-Technology, Bio-Engineering, Bio-Medical, Computer Science, Electronics & Communication Engineering, Management and Textile Engineering. This focus has brought a new insight on the learning methodologies and the terminology of accepting the cross definition of engineering and the research into it. We invite you to join us in this inspiring conversation. I am pretty sure that this conference would indulge the information from the various parts of the world and could

gathering. With more and more researchers coming into ICIDRET, this event would be as an annual event. This conference is sure that, this edition and the future edition will serve as a wise platform for the people to come with better research methodologies integrating each and every social component globally. If there would have been a thought of not integrating the RJ45 and few pieces of metal / plastic along with a PCB, today we could haven't used the telephones and mobile phones. With an ear-mark inspiration and constant support from the Global President Dr. S. Prithiv Rajan, ASDF International President Dr. P. Anbuoli, this publication stands in front of your eyes, without them this would haven't been possible in a very shortest span. Finally, I thank my family, friends, students and colleagues for their constant encouragement and support for making this type of conference. -- Kokula Krishna Hari K Editor-in-Chief www.kokulakrishnaharik.in

This book constitutes the refereed proceedings of the 25th International Computer Symposium on New Trends in Computer Technologies and Applications, ICS 2022, which took place in Taoyuan, Taiwan, in December 2022. ICS is one of the largest joint international IT symposia held in Taiwan. Founded in 1973, it is intended to provide a forum for researchers, educators, and professionals to exchange their discoveries and practices, and to explore future trends and applications in computer technologies. The biannual symposium offers a great opportunity to share research experiences and to discuss potential new trends in the IT industry. The 58 full papers and one invited paper presented in this volume were carefully reviewed and selected from 137 submissions. The papers have been organized in the following topical sections: Invited Paper; Algorithms, Bioinformatics, and Computation Theory; Cloud Computing and Big Data; Computer Vision and Image

Fellowship Foundation. The goal of the conference was to distill the distinct characteristics of the educational experience research universities can offer and to articulate the "value added" of such an experience to undergraduates so that it is readily comprehended. The conference was organized around three plenary sessions, each of which probed an aspect of the overall theme. These sessions were followed by meetings in which small groups examined issues raised by the speakers from institutional and disciplinary perspectives. Some of the questions probed at the conference included: (1) Based on their singular assets, what is the unique educational experience research universities can offer? (2) How can universities integrate their dual missions of "knowledge creation" and "knowledge transmission" in order to enrich and give new meaning to their undergraduate programs? and (3) How can research universities communicate the value of a research-infused

required to overcome various challenges. Sustainable and green IT are used to minimize the current ICT recycling problems which are harming our planet. The book discusses the new green information technologies as alternatives to conventional ICT, which have significantly harmed nature, and examines how to make recent technologies such as cloud computing; social networking; smart technology; blockchains, IoT (internet-of-things); and big data sustainable. Exploring sustainability awareness and importance among individuals and organizations in the developed and developing countries, most of the contributions conclude that sustainability should be considered a duty in order to change mindsets, attitudes and actions so as to preserve our planet. Furthermore, it examines the green information technology strategies and models.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of
