Adult Learning in the Digital Age Neil Selwyn 2006-03-22 This engaging book sheds light on the ways in which adults in the twenty-first century interact with technology in different learning environments. Based on one of the first large-scale academic research projects in this area, the authors present their findings and offer practical recommendations for the use of new technology in a learning society. They invite debate on: why ICTs are believed to be capable of affecting positive change in adult learning the drawbacks and limits of ICT in adult education what makes a lifelong

learner the wider social, economic, cultural and political realities of the information age and the learning society. Adult Learning addresses key questions and provides a sound empirical foundation to the existing debate, highlighting the complex realities of the learning society and e-learning rhetoric. It tells the story of those who are excluded from the learning society, and offers a set of strong recommendations for practitioners, policy-makers, and politicians, as well as researchers and students.

To everyone in the exclusive town of Bishops Harbor, Connecticut, Daphne—a socialite and philanthropist—and her real-estate mogul husband, Jackson, are a couple straight out of a fairy tale. Amber's envy could eat her alive . . . if she didn't have a plan. Amber uses Daphne's compassion and caring to insinuate herself into the family's life—the first step in a meticulous scheme to undermine her. Before long, Amber is Daphne's closest confidante, traveling to Europe with the Parrishes and their lovely young daughters, and growing closer to Jackson. But a skeleton from her past may undermine everything that Amber has worked towards, and if it is discovered, her well-laid plan may fall to pieces. Foundation and Earth Isaac Asimov 2012-02-22
The fifth novel in Isaac Asimov's classic science-fiction masterpiece, the Foundation series
THE EPIC SAGA THAT INSPIRED THE APPLE TV+ SERIES FOUNDATION
Golan Trevize, former Councilman of the First Foundation, has chosen the future, and it is Gaia. A superorganism, Gaia is a holistic planet with a common consciousness so intensely united that every dewdrop, every pebble, every being, can speak for all—and feel for all. It is a realm in which privacy is not only undesirable, it is incomprehensible. But is it the right choice for the destiny of mankind? While Trevize feels it is, that is not enough. He must know. Trevize believes the answer lies at the site of humanity's roots: fabled Earth . . . if it still exists. For no one is sure where the planet of Gaia's first settlers is to be found in the immense wilderness of the Galaxy. Nor can anyone explain why no record of Earth has been preserved, no mention of it made anywhere in Gaia's vast world-memory. It is an enigma
Trevize is determined to resolve, and a quest he is determined to undertake, at any cost.

Concurrence in European Private Law DE GRAAFF 2020-06-24 In the multi-level legal order, it is not unusual for a legal relationship between private parties to be governed by multiple Union rules on, for instance, non-discrimination, free movement, competition and the internal market more broadly. Nor is it uncommon that, on the face of it, national private law creates rights and duties as well. In such situations of concurrence, the question that arises is whether the interested party may elect the rule of his choice. Is he entitled to choose the rule which appears to him to be the most advantageous? This book offers a scheme of analysis by which this question can be debated and solved. Inspired by the experiences gained from examining several national systems of private law, the book starts from the premise that each rule, however founded, should be realised to the greatest possible extent. In principle, the existence of one rule does not, therefore, affect the scope of application of another rule. The book demonstrates that this principle also runs through the texts adopted by the Union legislature and through the judgments delivered by the Court of Justice of the European Union. It makes a clear case that in situations of concurrence, the substance of the rules should be decisive, and not merely their formal relationship

The National Programme for IT in the NHS Great Britain. National Audit Office 2008 This is the second report by the National Audit Office on the Programme: the first (HC 1173, session 2005-06, ISBN 9780102938289) was followed by the Committee of Public Accounts report (HC 390 session 2006-07, ISBN 9780215033628) and Government response (in Cm. 7152, ISBN 9780101715225). This further study reviews the response to the Committee's conclusions and recommendations and examines more generally the progress being made in delivering the Programme. While some parts of the Programme are complete or well advanced, the original timescales for the Care Records Service - one of the key components of the Programme - have not been met. Currently it seems likely to take four years more than planned - until 2014-15 - before every NHS Trust has fully deployed the care records systems. The estimated cost of the Programme is currently £12.7 billion (at 2004-05 prices), which is broadly unchanged. It remains difficult to produce a reliable estimate of local costs. Some benefits from the Programme, including financial savings, are starting to emerge. Suppliers have largely met the targets for service availability and performance deductions have been applied where there have been service failures. The challenges to be managed for the successful delivery of the Programme are: achieving strong leadership and governance; maintaining the confidence of patients that their records will be secure; securing the support and involvement of NHS staff; managing suppliers effectively; deploying and using the systems effectively at local level. Overall, all elements of the Programme are advancing and some are complete. For the Care Records Service, the original timescales proved to be unachievable, raised unrealistic expectations and put confidence in the Programme at risk. While the Programme costs have largely held, the timetable for the Care Records Service has slipped. The original vision for the Programme nevertheless remains intact and still appears feasible.

ITER: The Giant Fusion Reactor Michel Claessens 2019-10-17 This book provides for the first time an insider's view into ITER, the biggest fusion reactor in the world, which is currently being constructed in southern France. Aimed at bringing the "energy of the stars" to earth, ITER is funded by the major economic powers (China, the EU, India, Japan, Korea, Russia and the US). Often presented as a "nuclear but green" energy source, fusion could play an important role in the future electricity supply. But as delays accumulate and budgets continue to grow, ITER is currently a star partially obscured by clouds. Will ITER save humanity by providing a clean, safe and limitless source of energy, or is it merely a political showcase of cutting-edge technology? Is ITER merely an ambitious research project and partly a PR

initiative driven by some politically connected scientists? In any case, ITER has already helped spur on rival projects in the US, Canada and the UK. This book offers readers a behind-the-scenes look at this controversial project, which France snatched from Japan, and introduces them to a world of superlatives: with the largest magnets in the world, the biggest cryogenic plant and tremendous computing power, ITER is one of the most fascinating, and most international, scientific and technological endeavours of our time.

Between Empowerment and Manipulation Marijn Sax 2021-09-28 Popular health apps are commercial services. Despite the promise of empowerment they offer, the tensions introduced by their data-driven, dynamically adjustable digital environments engender a potential for manipulation to which their designers and operators can easily succumb. In this important book, the author develops an ethical framework to evaluate the commercial practices of for-profit health apps, proceeding to a detailed proposal of how to legally address the exploitation, for financial gain, of users' need for health. Focusing on the intricate tracking of users over time, coupled with the possibility to personalize the environment based on knowledge gained from tracking, the book's in-depth analysis of popular for-profit health apps engages with such particulars as the following: the strategic framing of health in health apps; the cultural tendency to presume we are unhealthy until we have proven we are healthy; the key concepts of autonomy, vulnerability, trust, and manipulation; how health apps develop ongoing profitable relationships with users; and use of misleading and aggressive commercial practices. The author argues that the European Union's Unfair Commercial Practices Directive, when informed by ethical considerations, offers promising legal solutions to the manipulation concerns raised by popular for-profit health apps. The book will be welcomed not only for its incisive scrutiny of the health app phenomenon but also for the light it sheds on the wider problems inherent in the digital society--what digital environments know about their users, how they use that knowledge, and for which purpose. Its progress from an ethical approach to legal solutions will recommend the book to lawyers concerned with business practices, human resources professionals, policymakers, and academics interested in the intersection of ethics and law.

Future Interaction Design A. Pirhonen 2005-12-06 In 1969 Herbert Simon wrote a book, The Science of the Artificial, in which he argued that cognitive science should have its area of application in the design of devices. He proposed the foundation of a science of the artificial related with cognitive science in the sense in which we have traditionally understood the relationship between the engineering disciplines and the basic sciences. Such a science has been called cognitive ergonomics or cognitive engineering (Norman 1986). Simon's cognitive ergonomics (1969), would be independent of cognitive science, its basic science, although both would be closely related. Cognitive science would contribute knowledge on human cognitive processes, and cognitive ergonomics would contribute concrete problems of design that should be solved in the context of the creation of devices. Norman (1986), the author that coined the term cognitive engineering, conceived it as an applied cognitive science where the knowledge of cognitive science is combined with that of engineering to solve design problems. According to Norman, its objectives would be: (1) to understand the fundamental principles of human actions important for the development of the engineering of design principles, and (2) to build systems that are pleasant in their use.
