## Mastering Chess Middlegames

Alexander Panchenko

2015-11-24 Grandmaster

Alexander Panchenko

(1953-2009) was one of the most successful chess trainers in the Soviet Union, and later in Russia. Panchenko ran a legendary chess school that specialised in turning promising players into masters. The secret of his success were his dedication and enthusiasm as a teacher combined with his outstanding training materials. 'Pancha' provided his pupils with systematic knowledge, deep understanding and the ability to take practical

classic Mastering Chess

Middlegames is for the first time available in translation, giving club-players around the world access to this unique training method. The book contains a collection of inspiring lessons on the most important middlegame topics: attack, defence, counterplay, realising the advantage, obstructing the plans of your opponent, the battle of the heavy pieces, and much more. In each chapter, Panchenko clearly identifies the various aspects of the topic, formulates easy-to-grasp rules, presents a large number of well-chosen examples and ends with a wealth of practical tests.

goes to the heart of all matter, uniting us across cultures, time, and space. Love and Math tells two intertwined stories: of the wonders of mathematics and of one young man's journey learning and living it. Having braved a discriminatory educational system to become one of the twenty-first century's leading mathematicians, Frenkel now works on one of the biggest ideas to come out of math in the last 50 years: the Langlands Program. Considered by many to be a Grand Unified Theory of mathematics, the Langlands Program enables researchers to translate findings from one field to another so that

as Fermat's last theorem, that had seemed intractable before. At its core, Love and Math is a story about accessing a new way of thinking, which can enrich our lives and empower us to better understand the world and our place in it. It is an invitation to discover the magic hidden universe of mathematics.

Opening or Sokolsky's Opening.

The Orngutan got its name after the Polish player Savielly Tartakower (1887-1956) visited the Bronx Zoo during the 1924 New York International

Tournament. He was impressed by an orangutan named Suzanna at the zoo and

decided to dedicate his next game to her. Tartakower noted that the climbing motion of the pawn to b4 and to b5 reminded

him of the orangutan. In round

4, Tartakower played 1.b4

against Géza Maróczy

(1870-1951) and drew after 57

moves. In 1903, Nikolai Bugayev

opening in the Russian magazine Shakmatnoye Obozreniye. In the 1930s, Soviet master Alexei Pavlovich Sokolsky (1908-1969) began analyzing and playing this opening in the USSR. In 1953, Sokolsky defeated grandmaster Salo Flohr (1908-1983) in Moscow with this opening. In 1963, he published his opening monograph *Debyut 1.b2-b4*. The idea of this irregular opening is for White to fianchetto his queen bishop onto the b2 square to control the a1-h8 diagonal. White also tries to prevent Black from expanding on the queenside as White gains more spatial advantage on

options to control the center and start his own attack. Both sides have many tactical threats and good attacking chances. This book has 500 illustrative and decisive games based on the opening 1.b4. Slight annotations have been added to each game. Diagrams have been added to the most critical positions of some interesting games. This instructive and entertaining collection of games arising from the Orangutan Opening will be of interest to those players who like unusual openings. Have fun!
