BSAVA Manual of Small Animal Dermatology Aiden P. Foster 2003-03-24 There have been major and rapid advances in the field of veterinary dermatology since the first BSAVA Manual of Small Animal Dermatology was published. To reflect this, the second edition of the BSAVA Manual of Small Animal Dermatology has been completely rewritten. The use of British, European, Australian and American authors has led to the incorporation of the new international scope of knowledge in this field. Designed with the busy practitioner in mind, the information is presented in a concise and readily accessible format, and the Manual is generously illustrated with colour figures, practical tables and useful diagrams. The book begins with a thorough survey of the basics of dermatology practice, from structure and function of mammalian skin, through history and examination, to a practical coverage of dermatopathology. There then follows a unique problem-oriented approach to the common clinical presentations, including pruritus, alopecia and nodules. These chapters consider the differentials and then describe the clinical approach used to arrive at a diagnosis (including history-taking, examination and diagnostic tests). In many instances algorithms are used to summarize the process and decision-making. A number of diseases that are not covered in detail in later chapters are presented briefly in a text box format, which is easily accessible to the reader. The most common skin diseases of dogs and cats, such as flea allergy, pyoderma and dermatophytosis, are then described in detail. The final section of the book is devoted to skin disease of exotic pets.

Fundamentals of Veterinary Ophthalmology Douglas H. Slatter 2001 Providing the latest information on diagnosis and treatment, *Fundamentals of Veterinary Ophthalmology* 3rd Edition gives the essential guidance needed to treat those with ocular disorders. It includes information on drug dosages, diagnostic techniques, systemic diseases, breed predisposition, and more! This book is a companion for both the clinician and student. Its composition has taken into consideration the increasing sophistication of veterinary ophthalmology and the difficulty of adequately covering many newer topics. These topics in detail are relevant to practicing ophthalmologists, and a general knowledge of them is important to veterinarians in general practice who treat the patient first.

The Betrayal of the Body Alexander Lowen 2012-07-01 *The Betrayal of the Body* is Alexander Lowen's pioneering study of the mind-body split. Lowen describes the way people deny the reality, needs, and feelings of their bodies. This denial leads to the development of the division between mind and body, creating an over-charged ego obsessed with thinking at the expense of feeling and being. This book illustrates the energetic factors behind the split, the factors that produce it, and the proven therapeutic techniques that are available to treat it. Lowen further explores the mind-body duality in the individual and its parallel duality and dysfunction in society between culture and nature, and between thinking and feeling.

Ophthalmology for the Veterinary Practitioner Frans C. Stades 2010-12-07 The standard work for ophthalmology in veterinary practice – now completely revised and extended. In its modern layout, the new edition continues a tried and tested concept. The present day developments in ophthalmological diagnostics and therapy are supplemented comprehensively throughout the book. In ophthalmology, the

paramount maxim is "Learning by doing". This book provides a concrete guide to diagnosis and therapy of all important eye diseases in small animals especially for those general veterinary practitioners without any specific experience in ophthalmology and to students. It enables the determination of a diagnosis even without specialised instruments, while at the same time it gives answers to the important questions: When should an eye patient be referred to a specialist? Which preparations are necessary for doing this? Specific veterinary features in pet animals, horses, birds and farm animals are compared. A special chapter dedicated to ophthalmological emergencies enables quick and assured actions to be undertaken in emergency situations. The structure of the book follows the steps of a clinical examination making it particularly user-friendly. First-class new colour photographs and instructive drawings illustrate symptoms, diagnosis and treatment methods.

Skin Diseases of the Dog and Cat Nicole A. Heinrich 2018-09-03 *A Colour Handbook of Skin Diseases of the Dog and Cat* was one of the first books to bring key information about skin diseases to clinicians in an easy-to-use problem-oriented format. This fully revised and updated Third Edition responds to the huge growth in knowledge about skin conditions over the last decade, including the discovery of new conditions, the development of new approaches to management, and effective new treatment options. Chapters are organized based on symptoms, each containing a decision tree giving basic and practical guidance. The clear user-friendly design provides one condition per page (or spread of pages). 13 chapters covering over 120 skin, claw and ear conditions classified by their principle presenting sign. Concise, systematically structured text covering definition, aetiology and pathogenesis, clinical features, differential diagnoses, diagnostic tests and management. Flow charts in each chapter to help clinicians get to the right diagnosis. Special focus on diseases affecting paediatric patients as well as chapters discussing paw, ear and nasal planum diseases.
