Environmentally Friendly Cities Eduardo Maldonado 2014-11-19 The 15th Passive and Low Energy Architecture (PLEA) conference considered the issues of sustainability and environmental friendliness at the city scale. Some 150 papers address the many and varied questions faced by architects and planners in reducing the impact on the environment of cities and their buildings.

Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Mastering Mathematics for WJEC GCSE: Intermediate Gareth Cole 2018-06-18 Exam Board: WJEC Level: GCSE Subject: Mathematics First Teaching: September 2015 First Exam: June 2017 Help students get to grips with the new style examinations in Numeracy and Mathematics with books that build all the necessary skills to progress their learning and develop their problem-solving skills. - Provides one book for each tier ensuring full coverage, with mathematics only questions and chapters clearly highlighted so the specifications can be co-taught or taught separately as required - Organises topics into units so as to provide questions that build understanding and fluency enabling students to confidently tackle and solve real and interesting problems - Enables students to identify the appropriate remediation or extension steps they need in order to make the best progress, through easy to follow progression strands that help to identify gaps in learning - Offers a seamless five year progression when used in conjunction with KS3 *Mastering Mathematics* Welsh editions will be available from Spring 2016

Mass Atrocities, the Responsibility to Protect and the Future of Human Rights Simon Adams 2021-01-12 This book ambitiously weaves together history and politics to explain all of the major situations where mass atrocities have occurred, or been prevented, over the 15 years since the 'Responsibility to Protect' (R2P) was adopted at the 2005

UN World Summit. The author provides a history of human rights, mass atrocities and the principle of the R2P from the perspective of someone whose day job has been to work with the UN Security Council, various governments and civil society to help ensure the international community does not fail those who face the threat of genocide, war crimes and crimes against humanity today. It examines the implementation of the controversial principle of R2P since 2011 and how we end the politics of impunity, indifference and inaction once and for all. Using case studies from Iraq, Syria, Myanmar and Libya, the book offers a unique perspective regarding how we make 'never again' a living principle, rather than a cliché and how we end the politics of impunity, indifference and inaction once and for all. It will be of especial interest to scholars, students and policymakers working in the fields of international politics or concerned about human rights, atrocities, the United Nations and international justice in the world today.

Making Education Work for the Poor William Elliott 2018-07-03 *Making Education Work for the Poor* identifies wealth inequality as the gravest threat to the endangered American Dream. Though studies have clearly illustrated that education is the primary path to upward mobility, today, educational outcomes are more directly determined by wealth than innate ability and exerted effort. This accounting directly contradicts Americans' understanding of the promise the American Dream is supposed to offer: a level playing field and a path towards a more profitable future. In this book, the authors share their own stories of their journeys through the unequal U.S. education system. One started from relative privilege and had her way to prosperity paved and her individual efforts augmented by institutional and structural support. The other grew up in poverty and had to fight against currents to complete higher education, only to find his ability to profit from that degree compromised by student debt. To directly counter wealth inequality and make education the 'great equalizer' that Americans believe it to be, this book calls for a revolution in financial aid policy, from debt dependence to asset empowerment. The book examines the evidence base supporting Children's Savings Accounts, including CSAs' demonstrated potential to improve children's outcomes all along the 'opportunity pipeline': early education, school achievement, college access and completion, and post-college financial health. It then outlines a policy that builds on CSAs to incorporate a sizable, progressive wealth transfer. This new policy, Opportunity Investment Accounts, is framed as the cornerstone of the wealth-building agenda the nation needs in order to salvage the American Dream. Written by leading CSA researchers, the book includes overviews of the major children's savings legislation proposed in Congress and the key features of prominent CSA programs in operation around the country today, as well as new qualitative and quantitative CSA research. The book ultimately presents a critical development of the theories that, together, explain how universal, progressive, asset-based education financing could make education work equitably for all American children.

Transplanting Care Laura L. Heinemann 2016-07-12 The sudden call, the race to the hospital, the high-stakes operation—the drama of transplant surgery is well known. But what happens before and after the surgery? In

Transplanting Care, Laura L. Heinemann examines the daily lives of midwestern organ transplant patients and those who care for them, from pretransplant preparations through to the long posttransplant recovery. Heinemann points out that as efforts to control healthcare costs gain urgency—and as new surgical techniques, drug therapies, and home medical equipment advance—most of the transplant process now takes place at home, among kin. Indeed, the transplant system effectively depends on unpaid care labor, typically provided by spouses, parents, siblings, and others. Drawing on scores of interviews with patients, relatives, and healthcare professionals, Heinemann follows a variety of patients and loved ones as they undertake this uncertain and strenuous “transplant journey.” She also shows how these home-based caregiving efforts take place within the larger economic and political context of a paucity of resources for patients and caregivers, who ultimately must surmount numerous obstacles. The author concludes that the many snags encountered by transplant patients and loved ones make a clear case for more comprehensive health and social policy that treats care as a necessarily shared public responsibility. An illuminating look at the long transplant journey, *Transplanting Care* also offers broader insight into how we handle infirmity in America—and how we might do a better job of doing so.

Disease Control Priorities, Third Edition (Volume 9) Dean T. Jamison 2017-12-06 As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

Pain Management and the Opioid Epidemic National Academies of Sciences, Engineering, and Medicine 2017-10-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Unmaking Waste Sarah Newman 2023-05-26 "In *Unmaking Waste*, Sarah Newman asks what happens when there are disagreements about what constitutes waste and what one should do with it, both at singular moments in time (for example, when ideas about waste collide in emerging colonial contexts) and across time (such as between those who left things behind in the past and the archaeologists who recover them). Newman examines ancient Mesoamerican understandings of waste, Euro-American perceptions of waste in New Spain, and early modern European ideals of civility and Christian understandings of good and bad, expressed metaphorically through cleanliness and filth. These differing perceptions, Newman argues, demands that we rethink centuries of

assumptions imposed on other places, times, and peoples: so long as "waste" remains a category misunderstood to be common-sensical and stable, archaeological methods will prove unequal to their task. Newman instead proposes "anamorphic archaeology," an approach that emphasizes the possibility that archaeological objects have multiple physical and conceptual lives"--

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Sick Schools David V. Anderson 2020-01-10 Who's afraid of for-profit education? Those who work in non-profit or government owned and operated schools. Many parents and other stakeholders have been made fearful by this education establishment. What's more important to humans: nutrition or education? Nutrition is more important because it is the prerequisite for other human activities, including education. What organizations provide food and who pays for the food? Food is provided by for-profit farmers, for-profit processors, for-profit wholesalers, and for-profit retailers. Most food is purchased with the consumers' own money, but a significant amount is purchased by low-income individuals using food stamps. Why can't education be provided similarly using education stamps? We trust for-profit enterprises to provide our food. Why can't we trust for-profit enterprises to provide K-12 education? Fearmongers have frightened us and made us into gullible compliant socialists who despise commercial activities in education. Go to the supermarket and ponder its marvelous array of foods and then contemplate how a for-profit K-12 education sector would please and amaze its customers.

High-Dimensional Probability Roman Vershynin 2018-09-30 High-dimensional probability offers insight into the behavior of random vectors, random matrices, random subspaces, and objects used to quantify uncertainty in high dimensions. Drawing on ideas from probability, analysis, and geometry, it lends itself to applications in

mathematics, statistics, theoretical computer science, signal processing, optimization, and more. It is the first to integrate theory, key tools, and modern applications of high-dimensional probability. Concentration inequalities form the core, and it covers both classical results such as Hoeffding's and Chernoff's inequalities and modern developments such as the matrix Bernstein's inequality. It then introduces the powerful methods based on stochastic processes, including such tools as Slepian's, Sudakov's, and Dudley's inequalities, as well as generic chaining and bounds based on VC dimension. A broad range of illustrations is embedded throughout, including classical and modern results for covariance estimation, clustering, networks, semidefinite programming, coding, dimension reduction, matrix completion, machine learning, compressed sensing, and sparse regression.

Project Planning and Project Success Pedro Serrador 2014-11-24 Project planning is generally accepted as an important contributor to project success. However, is there research that affirms the positive impact of project planning and gives guidance on how much effort should be spent on planning? To answer these questions, this book looks at current literature and new research of this under-studied area of project management. The author presents his findings from an extensive review of project planning literature that covers more than 270 sources. He also discusses new research that analyzes data from more than 1,300 global projects. The book confirms that the time spent on planning activities reduces risk and significantly increases the chances of project success. It also concludes that there can be too much planning and shows that the optimum ratio of planning to effort is 25%. The book examines the impact of project planning on different industries. It discusses research in the construction and information technology (IT) industries, and presents a case study of how to plan and track a software development project. The book also looks at the impact of geography on project planning and success. Intended as a basic tool in the library of any project manager or general manager, this book brings to light project planning techniques and information that have never been published previously. It is an important resource on how to plan projects properly and propel your career forward.

Markets for Managers Anthony J. Evans 2014-08-12 An accessible text that provides managers with a well-rounded economic awareness Successful managers possess an understanding of economic and market principles as they relate to business itself. Markets for Managers presents managerial economics in a casual, accessible format that will help management professionals take economic realities into account when running their companies or divisions. The book takes a global perspective while covering the full range of micro- and macroeconomic principles that managers around the world need to know. Complete with online resources that include further reading and a YouTube playlist, this guide puts business management practice within its economic context to produce a practical tool for managers. By understanding market operation and what might cause market failure, management professionals can lead companies that respond to market pressures and align operating strategies with economic realities. Monetary and fiscal policies affect businesses of all sizes, and in Markets for Managers, business leaders can learn how to read the ever-shifting fiscal landscape. Delivers market information tailored to managers and the managerial decision-making process Comprehensively explains macro- and microeconomic ideas in language that's accessible Provides concrete suggestions for utilizing market knowledge to improve internal operations and align incentives Helps managers build a global view of business for optimal decision making The practical format of Markets for Managers is perfect for professionals and students who want to gain an applied perspective on today's most pressing economic issues.

When Texas Prison Scams Religion Michael G. Maness 2022-01-28 State ordained child torturer Minister prisoner represents the offices of the Lt. Gov. Dan Patrick, TDCJ. Bryan Collier, TCBJ, and wardens throughout the

prison—but the greatest piece of fantasy is how the Executive Culture of cover ups came to see this Fool's Parade as good for Texas, even "God's will" to change the world. TDCJ destroys records of violence after 7 years and has hired the lowest qualified of the applicant pool many times in the last 25 years, even ordered the cleaning of contraband at the Polunsky Prison, and all those responsible for covering up a horde were promoted! 25 years of this! Who thinks a director that allowed that can competently supervise a naïve volunteer in a systemwide program of indenturing prisoners? Why is the director sponsoring psychopaths counseling psychopaths? Answer? MONEY—selling the Fool's Parade Fantasy that buying faith from prisoners with favor turns them into saints after 4 years of Bible to naïve Evangelicals. Who thinks it JUSTICE that 400,000,000 hours of officer contact has zero definitive influence on parole when a commissioner spends

Prison Break David Dagan 2016-05-02 American conservatism rose hand-in-hand with the growth of mass incarceration. For decades, conservatives deployed "tough on crime" rhetoric to attack liberals as out-of-touch elitists who coddled criminals while the nation spiraled toward disorder. As a result, conservatives have been the motive force in building our vast prison system. Indeed, expanding the number of Americans under lock and key was long a point of pride for politicians on the right - even as the U.S. prison population eclipsed international records. Over the last few years, conservatives in Washington, D.C. and in bright-red states like Georgia and Texas, have reversed course, and are now leading the charge to curb prison growth. In Prison Break, David Dagan and Steve Teles explain how this striking turn of events occurred, how it will affect mass incarceration, and what it teaches us about achieving policy breakthroughs in our polarized age. Combining insights from law, sociology, and political science, Teles and Dagan will offer the first comprehensive account of this major political shift. In a challenge to the conventional wisdom, they argue that the fiscal pressures brought on by recession are only a small part of the explanation for the conservatives' shift, over-shadowed by Republicans' increasing anti-statism, the waning efficacy of "tough on crime" politics and the increasing engagement of evangelicals. These forces set the stage for a small cadre of conservative leaders to reframe criminal justice in terms of redeeming wayward souls and rolling back government. These developments have created the potential to significantly reduce mass incarceration, but only if reformers on both the right and the left play their cards right. As Dagan and Teles stress, there is also a broader lesson in this story about the conditions for cross-party cooperation in our polarized age. Partisan identity, they argue, generally precedes position-taking, and policy breakthroughs are unlikely to come by "reaching across the aisle," promoting "compromise," or appealing to "expert opinion." Instead, change happens when political movements redefine their own orthodoxies for their own reasons. As Dagan and Teles show, outsiders can assist in this process - and they played a crucial role in the case of criminal justice - but they cannot manufacture it. This book will not only reshape our understanding of conservatism and American penal policy, but also force us to reconsider the drivers of policy innovation in the context of American politics.

Control of Distributed Parameter Systems 1982 Jean-Pierre Babary 2014-05-16 Control of Distributed Parameter Systems 1982 covers the proceeding of the Third International Federation of Automatic Control (IFAC) Symposium on Control of Distributed Parameter Systems. The book reviews papers that tackle issues concerning the control of distributed parameter systems, such as modeling, identification, estimation, stabilization, optimization, and energy system. The topics that the book tackles include notes on optimal and estimation result of nonlinear systems; approximation of the parameter identification problem in distributed parameters systems; and optimal control of a punctually located heat source. This text also encompasses the stabilization of nonlinear parabolic equations and the decoupling approach to the control of large spaceborne antenna systems. Stability of Hilbert space contraction semigroups and the tracking problem in the fractional representation approach are also discussed. This book will be of great interest to researchers and professionals whose work concerns automated control systems.

Understanding Machine Learning Shai Shalev-Shwartz 2014-05-19 Introduces machine learning and its

algorithmic paradigms, explaining the principles behind automated learning approaches and the considerations underlying their usage.

Behavioral Finance: The Second Generation Meir Statman 2019-12-02 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Architectural Research Addressing Societal Challenges Volume 1 Manuel Jorge Rodrigues Couceiro da Costa 2017-09-19 The EAAE/ARCC International Conference, held under the aegis of the EAAE (European Association for Architectural Education) and of the ARCC (Architectural Research Centers Consortium), is a conference organized every other year, in collaboration with one of the member schools / universities of those associations, alternatively in North America or in Europe. The EAAE/ARCC Conferences began at the North Carolina State University College of Design, Raleigh with a conference on Research in Design Education (1998); followed by conferences in Paris (2000), Montreal (2002), Dublin (2004), Philadelphia (2006), Copenhagen (2008), Washington (2010), Milan (2012) and Honolulu (2014). The conference discussions focus on research experiences in the field of architecture and architectural education, providing a critical forum for the dissemination and engagement of current ideas from around the world.

Critical Perspectives on the Management and Organization of Emergency Services Paresh Wankhade 2019-05-16 *Critical Perspectives on the Management and Organization of Emergency Services* makes an important contribution to the subject of emergency services management and to public administration and organization studies more generally. It critically assesses developments in emergency services management by examining the multi-dimensional nature of the provision of emergency services and their connectedness in advanced western democracies. The effective management of emergency services has never been more important than in today's high-pressured and cost-conscious public sector. The authors of this volume forensically analyse the challenges of delivering emergency services within this context. This book provides an in-depth, scholarly and comprehensive analysis of the changing landscape of emergency service provision and clearly addresses a gap in the market for a critical volume on the emergency services. For anyone seeking to understand why and how the management of emergency services matters, this collection is essential reading.

Nursing Informatics 2014 K. Saranto 2014-07-24 Standing, as it does, at the intersection of the information, computer, social and behavioral sciences and healthcare, and dealing with the resources, devices and methods required to optimize the acquisition, storage, retrieval and use of information in health and biomedicine, nursing informatics is increasingly crucial in modern healthcare. This book presents selected papers from the Twelfth Nursing Informatics Congress (NI2014), held in Taipei, Taiwan in June 2014, and entitled 'East meets West eSMART+'. The aim of the congress is to provide a single, high-profile, internationally renowned forum for research in the theory and practice of nursing informatics. The comprehensive scientific program focuses on mobile and web technologies with healthcare delivery applications, as well as currently relevant core topics including patient safety and quality, data information management, usability, meaningful use and educating for

competencies. Containing 68 papers selected from the 280 presentations by delegates from more than 30 countries, the book presents an overview of current research and practice which will be of interest to all those whose healthcare role involves the use of modern information technology.

Observing the Volcano World Carina J. Fearnley 2018-07-13 This open access book provides a comprehensive overview of volcanic crisis research, the goal being to establish ways of successfully applying volcanology in practice and to identify areas that need to be addressed for future progress. It shows how volcano crises are managed in practice, and helps to establish best practices. Consequently the book brings together authors from all over the globe who work with volcanoes, ranging from observatory volcanologists, disaster practitioners and government officials to NGO-based and government practitioners to address three key aspects of volcanic crises. First, the book explores the unique nature of volcanic hazards, which makes them a particularly challenging threat to forecast and manage, due in part to their varying spatial and temporal characteristics. Second, it presents lessons learned on how to best manage volcanic events based on a number of crises that have shaped our understanding of volcanic hazards and crises management. Third, it discusses the diverse and wide-ranging aspects of communication involved in crises, which merge old practices and new technologies to accommodate an increasingly challenging and globalised world. The information and insights presented here are essential to tapping established knowledge, moving towards more robust volcanic crises management, and understanding how the volcanic world is perceived from a range of standpoints and contexts around the globe.

Financial Management and Accounting in the Public Sector Gary Bandy 2023-03-14 The importance of public financial management for the health and wellbeing of citizens became dramatically apparent as governments sought to respond to the coronavirus pandemic in 2020. Now, governments and other public sector organizations face the challenge of recovering from the pandemic whilst also seeking to achieve Sustainable Development Goals, with squeezed budgets and ever-increasing demands for public services. Public sector managers are confronted daily with targets and demands that are often set in confusing accounting and financial language. In *Financial Management and Accounting in the Public Sector*, Gary Bandy employs a clear and concise narrative to introduce the core concepts of public financial management to help those managers to deliver programmes, projects and services that are value for money. As the author puts it, managing public money is an art, not a science. This third edition has been revised and updated throughout, offering: • a structure that is more clearly linked to the stages of the public financial management cycle; • greater coverage of transparency and accountability issues; • a broader view of public procurement to include goods, works and services and effective contract management; and • an increased focus on public spending in the context of a post-COVID environment. With a glossary of terms to help managers understand and be understood by accountants, as well as learning objectives, discussion questions and exercises, this practical textbook will help students of public management and administration to understand the financial and accounting aspects of managing public services.

Global Trends 2040 National Intelligence Council 2021-03 "The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) *Global Trends 2040-A More Contested World* (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health

insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Industrial/Organizational Psychology: An Applied Approach Michael G. Aamodt 2015-01-01 Striking a balance between research, theory, and application, the eighth edition of INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY: AN APPLIED APPROACH helps students discover the relevance of industrial/organizational psychology in everyday life through practical application. The book guides students in analyzing topics such as resume writing, interview survival, job description authoring, performance appraisal, employment law, job satisfaction, work motivation, and leadership. Humor, case studies, real-world examples, and a friendly writing style make the book both readable and interesting. Numerous charts, tables, flowcharts, and exercises help students conceptualize complex issues. Islamic Charity Samantha May 2021-07-29 Since 9/11 and the global War on Terror, practitioners of Islam in Europe and beyond have been scrutinised and surveyed under suspicion of disloyalty and as potential disrupters of national social cohesion. Seemingly benign, altruistic practices, such as charity, are viewed as potential threats to national security and have increasingly become subject to counter-terrorism policies. This work seeks to critically assess the assumptions behind the lesser-known financial War on Terror, through exploration of the effects of current policies on Muslim charitable practices in the UK. The consequences of current policies are multi-faceted – from the stigmatization and suspicion of Muslim charities and communities, individual loss of status and financial standing, to a decrease of living standards and/or loss of lives. Engaging with the everyday socio-political activities of Muslim individuals, this book gives voice to the motivations, apprehensions and challenges faced by Muslim charitable practitioners. A must read for anyone wanting to challenge policy assumptions behind increased surveillance of charities and individual donors, whilst outlining the repercussions of current policies on Muslim individuals and charities.

HCI International 2014 - Posters' Extended Abstracts Constantine Stephanidis 2014-05-19 This is the second of a two-volume set (CCIS 434 and CCIS 435) that constitutes the extended abstracts of the posters presented during the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014 and consisting of 14 thematic conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The extended abstracts were carefully reviewed and selected for inclusion in this two-volume set. This volume contains posters' extended abstracts addressing the following major topics: social media and social networks; learning and education; design for all; accessibility and assistive environments; design for aging; games and exergames; health and well-being; ergonomics and safety; HCI in business, tourism and transport; human-human and human-agent communication; user experience case studies.

Financial Accounting and Reporting Mr Barry Elliott 2019 Financial Accounting & Reporting is the book that helps students and professionals succeed in their studies and the workplace by providing practical support and clear principles for applying international standards and preparing financial statements. MyLab Accounting is not included. Students, if MyLab Accounting is a recommended/mandatory component of the course, please ask your instructor for the correct ISBN and course ID. MyLab Accounting should only be purchased when required by an instructor. Instructors, contact your Pearson representative for more information.

Risk and Return for Regulated Industries Bente Villadsen 2017-04-27 Risk and Return for Regulated Industries provides a much-needed, comprehensive review of how cost of capital risk arises and can be measured, how the special risks regulated industries face affect fair return, and the challenges that regulated industries are likely to face in the future. Rather than following the trend of broad industry introductions or textbook style reviews of utility finance, it covers the topics of most interest to regulators, regulated companies, regulatory lawyers, and rate-of-return analysts in all countries. Accordingly, the book also includes case studies about various countries and discussions of the lessons international regulatory procedures can offer. Presents a unified treatment of the regulatory principles and practices used to assess the required return on capital Addresses current practices before exploring the ways methods play out in practice, including irregularities, shortcomings, and concerns for the future Focuses on developed economies instead of providing a comprehensive global reviews Foreword by Stewart C. Myers

The Changing Role of Geological Surveys P.R. Hill 2020-12-07 Senior managers and Heads of Geological Survey Organizations (GSOs) from around the world have contributed a collection of papers to provide a benchmark on how GSOs are responding to national and international needs in a rapidly changing world. GSOs continue to provide key scientific information about Earth systems, natural hazards and climate change. As countries adopt sustainable development principles and the public increasingly turns to social media to find information about resource and environmental issues, the generation and communication of Earth science knowledge become increasingly important. This volume provides a snapshot of how GSOs are adapting their activities to this changing world. The different national perspectives presented converge around several common themes related to resources, environment and big data. Climate change and the UN's Sustainable Development Goals provide an increased incentive for GSOs of the world to work in harmony, to generate knowledge of Earth systems and to provide solutions for sustainable management of the planet.

The Fourth Industrial Revolution Klaus Schwab 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Artificial Intelligence in Real-Time Control 1992 M.G. Rodd 2014-06-28 The symposium had two main aims, to investigate the state-of-the-art in the application of artificial intelligence techniques in real-time control, and to bring together control system specialists, artificial intelligence specialists and end-users. Many professional

engineers working in industry feel that the gap between theory and practice in applying control and systems theory is widening, despite efforts to develop control algorithms. Papers presented at the meeting ranged from the theoretical aspects to the practical applications of artificial intelligence in real-time control. Themes were: the methodology of artificial intelligence techniques in control engineering; the application of artificial intelligence techniques in different areas of control; and hardware and software requirements. This symposium showed that there exist alternative possibilities for control based on artificial intelligence techniques.

Model Rules of Professional Conduct American Bar Association. House of Delegates 2007 The Model Rules of

Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.
