Meaning in Translation

Larisa Ilynska 2016-02-08

Meaning in Translation:

Illusion of Precision

represents a collection of papers on fundamental and applied research on a wide range of linguistic topics, including terminology standardisation and harmonisation, the pragmatic, semantic and grammatical aspects of meaning in translation, and the translation of sacred,

legal, poetic, promotional and scientific and technical texts. This volume offers a platform where scholars from various linguistic and cultural backgrounds, studying a variety of subjects, share their opinions on matters of utmost importance in the field of translation theory and practice. This book will appeal to researchers working within the various fields of linguistics, language planners,

University Rankings Jung Cheol Shin 2011-06-06 This ground-breaking and exhaustive analysis of university ranking surveys scrutinizes their theoretical bases, methodological issues, societal impact, and policy implications, providing readers with a deep understanding of these controversial comparators. The authors propose that university rankings are misused by policymakers and institutional leaders alike. They assert that these interested parties overlook the highly problematic internal logic of ranking methodologies even as they obsess over the surveys' assessment of their status. The result is that institutions suffer from short-termism, realigning their resources to maximize their relative rankings. While rankings are widely used in policy and

Far from showing how to manipulate the system, this collection of work by key researchers aims to enlighten interested parties.

bibliographic links came to be regarded as mathematical variables in abstract models of scientific communication? What is the role of quantitative analyses of scientific and technical documentation in current science policy and management? *Bibliometrics and Citation Analysis: From the Science Citation Index to Cybermetrics* answers these questions through a comprehensive overview of theories, techniques, concepts, and applications in the interdisciplinary and steadily growing field of bibliometrics. Since citation indexes came into the limelight during the mid-1960s, citation networks have become increasingly important for many different research fields. The book begins by investigating the empirical, philosophical, and mathematical foundations of bibliometrics, including its beginnings with the Science Citation Index, the theoretical framework

behind it, and its mathematical underpinnings. It then examines the application of bibliometrics and citation analysis in the sciences and science studies, especially the sociology of science and science policy. Finally it provides a view of the future of bibliometrics, exploring in detail the ongoing extension of bibliometric methods to the structure and dynamics of the World Wide Web. This book gives newcomers to the field of bibliometrics an accessible entry point to an entire research tradition otherwise scattered through a vast amount of journal literature. At the same time, it brings to the forefront the cross-disciplinary linkages between the various fields (sociology, philosophy, mathematics, politics) that intersect at the crossroads of citation analysis. Because of its discursive and interdisciplinary approach, the book is useful to those in every area of scholarship involved in the

University-Industry Collaboration Strategies in the Digital Era Günay, Durmu? 2021-01-29

Competitive strategies and higher education-industry collaboration policies are playing a vital role in fostering the reputation and international rankings of higher education institutions. The positive impact of these policies may best be observed in the economic and social outputs of many countries such as the USA, Singapore, South Korea, and European Union (EU) countries such as Belgium, Germany, France, and the Netherlands. However, the number of academic publications that specifically concentrate on the impact of these policies on higher education

University-Industry Collaboration Strategies in the Digital Era is an essential research publication that provides comprehensive research on competitive strategies for higher education institutions that will allow them to forge beneficial partnerships with industries that will have a significant impact on their success. Highlighting a wide range of topics such as human resource management, network planning, and institutional structure, this book is ideal for administrators, education professionals, academicians, researchers, policymakers, and students.

However, the publishing and dissemination of scholarly books and journals remains essential to academic research. How are publishers adapting this evolving environment? In *The Business of Scholarly Publishing*, Albert N. Greco examines this question through a detailed analysis of the business of the scholarly publishing in the United States since World War II. Drawing on an extensive review of the literature, statistical sources, and real examples from the author's experience in the industry, this book analyzes the changing circumstances of scholarly publishing. Netherlands Yearbook of International Law 2019

This volume of the Netherlands Yearbook of International Law (NYIL) is the fiftieth in the Series, which means that the NYIL has now been with us for half a century. in international law. Once the decision was made that this would be the subject of this year's NYIL, the editors asked themselves a number of questions. For instance: Not many academic disciplines have yearbooks, so what is the reason we do? What is the added value of having a yearbook alongside the abundance of international law journals, regular monographs and edited volumes that are published on a yearly basis? Does the existence of yearbooks tell us something about who we are, or who we think we are, or what we have to contribute to the world? These questions will be addressed both in a general and in a specific sense, whereby a number of yearbooks published all over the world will be looked at in further detail. The Netherlands Yearbook of International Law was first published in 1970. It offers a forum for the publication of scholarly articles in a varying thematic content.

Numerical Correlation

between Impact Factor and Web Ranking of Electronic Scientific Journals Using

Regression Analysis Giorgos Kouroupoulos 2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis.

Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals. A sample of 57 publishers with 6,272 scientific journals and 50 standalone scientific journals was analyzed during research procedure. In this study, two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals.

Alexa rank and Statscrops rank. The electronic databases through the internet constitute the main information resources of this study about the impact factors. The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web. Furthermore, it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non-linearly correlation. Even if there is very strong correlation between impact factor and web rank for electronic journals, the prediction of impact factor from web rank is not possible and presents many divergences.

by a reputational hierarchy of institutions that sustains and is reinforced by HERS. Despite all the opinions and arguments about the legitimacy of the rankings as a construct, it seems experts agree that they are here to stay. The question, therefore, seems to be less about whether or not universities should be compared and ranked, but the manner in which this is undertaken. Delivering a fresh perspective on global rankings, this book summarizes the development of HERS and provides a critical evaluation of the effects of HERS on four different major regions – South Africa, the Arab region, South East Asia, and Australia. It will appeal to any academic, student, university administrator or governing body interested in or affected by global higher education ranking systems. Multidimensional Journal

Evaluation Stefanie Hausteil 2012-04-26
Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions, which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011.

However, there is information and then there is correct, appropriate, and timely information. While we might love being able to turn to Wikipedia® for encyclopedia-like information or search Google® for the thousands of links on a topic, engineers need the best information, information that is evaluated, up-to-date, and complete. Accurate, vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans. While the award-winning first edition of *Using the Engineering Literature* used a roadmap analogy, we now need a three-dimensional analysis reflecting the complex and dynamic nature of research in the information age. *Using the Engineering Literature, Second Edition* provides a guide to the wide range of resources available in all fields of engineering. Seeking Impact and Visibility
Henry Trotter 2014-06-12

African scholarly research is relatively invisible globally because even though research production on the continent is growing in absolute terms, it is falling in comparative terms. In addition, traditional metrics of visibility, such as the Impact Factor, fail to make legible all African scholarly production. Many African universities also do not take a strategic approach to scholarly communication to broaden the reach of their scholars work. To address this challenge, *The Scholar*

Communication in Africa Programme (SCAP) was established to help raise the visibility of African scholarship by mapping current research and communication practices in Southern African universities and by recommending and piloting technical and administrative innovations based on open access dissemination principles. To do this, SCAP conducted extensive research in four faculties at the Universities of Botswana, Cape Town, Mauritius and Namibia.

The Chicago Guide to Your Career in Science

Victor A. Bloomfield
2008-11-15 Embarking upon research as a graduate student or postdoc can be exciting and enriching—the start of a rewarding career. But the world of scientific research is also a competitive one, with grants and good jobs increasingly hard to find. The Chicago Guide to Your Career in Science is intended to help scientists not just cope but

excel at this critical phase in their careers. Victor A. Bloomfield and Esam E. El-Fakahany, both well-known scientists with extensive experience as teachers, mentors, and administrators, have combined their knowledge to create a guidebook that addresses all of the challenges that today's scientists-in-training face. They begin by considering the early stages of a career in science: deciding whether or not to pursue a PhD, choosing advisors and mentors, and learning how to teach effectively.

Bloomfield and El-Fakahany then explore the skills essential to conducting and presenting research. The Chicago Guide to Your Career in Science offers detailed advice on how to pursue research ethically, manage time, and communicate effectively, especially at academic conferences and with students and peers.

Handbook of Research on the Impacts, Challenges, and Policy Responses to Overtourism

Ribeiro de Almeida, Cláudia

2020-02-28 In recent years, the increasing number of tourists traveling to specific urban and resort destinations has caused challenges for the effective management of tourism in these areas, with a resulting negative impact on towns, cities, and host communities. Such issues have included placing undue pressure on infrastructure; destruction of the physical, economic, and socio-cultural environment; and affecting the quality of residents' daily lives by impacting their mobility and, in some cases, the price and rent of resident accommodation, goods, and services. To achieve a certain level of balance between the interests of local residents and visitors, new regulatory

measures and legislation in high tourism areas must be discussed. The Handbook of Research on the Impacts, Challenges, and Policy Responses to Overtourism is a collection of innovative research on best practices and legislation solutions for the management of tourism destinations suffering from overtourism, tourismophobia, or antitourism movement issues. While highlighting topics including overcrowding, social displacement, and tourism management, this book is ideally designed for local government officials, policymakers, lawmakers, researchers, entrepreneurs, industry professionals, travel agencies, hotels, academicians, and students seeking current innovative empirical research on destination-management practices and application techniques.

Introduction to Scientific Publishing

book is a very concise introduction to the basic knowledge of scientific publishing. It starts with the basics of writing a scientific paper, and recalls the different types of scientific documents. It gives an overview on the major scientific publishing companies and different business models. The book also introduces to abstracting and indexing services and how they can be used for the evaluation of science, scientists, and institutions. Last but not least, this short book faces the problem of plagiarism and publication ethics.

typical of vibrant public spheres, and service to the larger society—are everywhere being creatively destroyed in order to accord with market and military models befitting the academic-industrial complex. While it has become increasingly clear that facilitating the sustainability movement is the great 21st century educational challenge at hand, this book asserts that it is both a dangerous and criminal development today that sustainability in higher education has come to be defined by the complex-friendly “green campus” initiatives of science, technology, engineering and management programs. By contrast, *Greening the Academy: Ecopedagogy Through the Liberal Arts* takes the standpoints of those working for environmental and ecological justice in order to critique the unsustainable disciplinary limitations within the humanities and

social sciences, as well as provide tactical reconstructive openings toward an empowered liberal arts for sustainability. *Greening the Academy* thus hopes to speak back with a collective demand that sustainability education be defined as a critical and moral vocation comprised of the diverse types of humanistic study that will benefit the well-being of our emerging planetary community and its numerous common locales. *Library and Information Sciences* Chuanfu Chen 2014-09-30 This book explores the development, trends and research of library and information sciences (LIS) in the digital age. Inside, readers will find research and case studies written by LIS experts, educators and theorists, most of whom have visited China, delivered presentations there and drafted their articles based on feedback they received.

discover the LIS issues and concerns that China and the international community have in common. The book first introduces the opportunities and challenges faced by the library and information literacy profession and discusses the key role of librarians in the future of information literacy education. Next, it covers trends in LIS education by examining the vision of the iSchool movement and detailing its practice in Syracuse University. The book then covers issues in information seeking and retrieval by showing how visual data mining technology can be used to detect the relationship and pattern between terms on the Q&A of a social media site. It also includes a case

study regarding tracing information seeking behavior and usage on a multimedia website. Next, the book stresses the importance of building an academic accreditation framework for scientific datasets, explores the relationship between bibliometrics and university rankings, and details the birth and development of East Asian Libraries in North America. Overall, the book offers readers insight into the changing nature of LIS, including the electronic dissemination of information, the impact of the Internet on libraries, the changing responsibilities of library professionals, the new paradigm for evaluating information, and characteristics and functions of today's library personnel.
