**Innovation, Economic Development, and Intellectual Property in India and China** Kung-Chung Liu 2019-09-06 This open access book analyses intellectual property codification and innovation governance in the development of six key industries in India and China. These industries are reflective of the innovation and economic development of the two economies, or of vital importance to them: the IT Industry; the film industry; the pharmaceutical industry; plant varieties and food security; the automobile industry; and peer production and the sharing economy. The analysis extends beyond the domain of IP law, and includes economics and policy analysis. The overarching concern that cuts through all chapters is an inquiry into why certain industries have developed in one country and not in the other, including: the role that state innovation policy and/or IP policy played in such development; the nature of the state innovation policy/IP policy; and whether such policy has been causal, facilitating, crippling, co-relational, or simply irrelevant. The book asks what India and China can learn from each other, and whether there is any possibility of synergy. The book provides a real-life understanding of how IP laws interact with innovation and economic development in the six selected economic sectors in China and India. The reader can also draw lessons from the success or failure of these sectors.

**Magic Light and the Dynamic Landscape** Jeanine Leech 2014-07-08 It has been said many times that photography is painting with light, or that photography is all about light. For Jeanine Leech, the idea of painting with light is a passion. She uses it as a brush for color, texture, and dimension to create dynamic and expressive images. In this book, Leech details her techniques for finding and using the best light to create breathtaking landscape images. To get that special moment, you are often chasing the light. In landscape photography there are moments of defining light. It can be a single moment that may only last a second when the light is just perfect. These moments don't happen every day but when they do one frame can tell the story with more visual impact than all the others. The ability to improvise, to stop and get the light when these moments occur randomly, is the difference between producing a standard photo and something that truly stand out. This book provides the basic principles of photography necessary for capturing this magic successfully. Starting with a rundown of the equipment that Leech uses and explaining the core concepts of photography, the book proceeds to detail shooting at different times of day. From the first light at dawn, through midday and onto dusk, Leech provides stunning examples of how each type of light can be used. Each photo in the book is accompanied by the camera settings used to capture it. True magic light is rare. It happens in a fleeting moment, not to be repeated again, lasting only a few minutes or seconds. Its quality is so unique that it changes the color, appearance and ultimately the mood of the subjects it falls upon. Part three of the book focuses on the different types of landscapes. First weather is covered. A photo shoot in the Smoky Mountains shows how attention to detail and setting can make the shot. The light and the weather change in mere

seconds. As Leech points out, knowing the basics of photography and how to work your equipment quickly is essential. Each of the stunning photos in the book is a testament to this. After that Leech discusses how she chooses different landscapes. Intimate landscapes can be found anywhere. Sometimes making artistic choices like only focusing on a small portion of a setting provides an image with greater impact. Finally, the book covers the use of polarizer's, various filters and multiple digital darkroom techniques.

**Bayesian Cost-Effectiveness Analysis with the R package BCEA** Gianluca Baio  
2017-05-25 The book provides a description of the process of health economic evaluation and modelling for cost-effectiveness analysis, particularly from the perspective of a Bayesian statistical approach. Some relevant theory and introductory concepts are presented using practical examples and two running case studies. The book also describes in detail how to perform health economic evaluations using the R package BCEA (Bayesian Cost-Effectiveness Analysis). BCEA can be used to post-process the results of a Bayesian cost-effectiveness model and perform advanced analyses producing standardised and highly customisable outputs. It presents all the features of the package, including its many functions and their practical application, as well as its user-friendly web interface. The book is a valuable resource for statisticians and practitioners working in the field of health economics wanting to simplify and standardise their workflow, for example in the preparation of dossiers in support of marketing authorisation, or academic and scientific publications.
