Low Impact Development 2010-07-01 The manual introduces general audiences to designing landscapes for urban stormwater runoff -- a primary source of watershed pollution. The goal is to motivate awareness and implementation of LID in a wide cross-section of stakeholders, from property owners to municipal governments that regulate infrastructure development. The manual provides a holistic framework in which a novice homeowner and an experienced developer can each find an equally transformative role to enact.

Porous Pavements Bruce K. Ferguson 2005-02-18 Pavements are the most ubiquitous of all man-made structures, and they have an enormous impact on environmental quality. They are responsible for hydrocarbon pollutants, excess runoff, groundwater decline and the resulting local water shortages, temperature increases in the urban "heat island," and for the ability of trees to extend their roots in order to live. Porous pavements, despite their ability to mitigate these factors, remain the object of much skepticism and controversy. Written by a renowned expert with 25 years of experience in urban watershed management, Porous Pavements is the first comprehensive "encyclopedia" of porous pavement materials. The book begins with five chapters that lay a foundation for all porous pavement materials and applications, introducing the types of materials and arrangements, their roles in the urban environment, and the principles of pavement structure, hydrology, and rooting space. The following nine chapters outline the costs, maintenance requirements, advantages and disadvantages for different applications, installation methods, sources of standard specifications, and performance levels for each family of porous pavement materials. Relying on case studies and factual data from observed experience, and containing abundant references for further information, Porous Pavements gives responsible practitioners a complete toolbox from which to select the appropriate material for site-specific conditions, providing a "green" alternative to impervious pavements.

LEED AP BD+C Exam Preparation Guide Fulya Kocak Gin 2016 A comprehensive study reference used to prepare for the LEED AP BD+C specialty exam. This guide provides a detailed and efficient approach to studying through the use of concise text and detailed, full-color illustrations and photos and compliments the LEED v4 Reference Guide for Building Design and Construction.

Best Practice Erosion and Sediment Control Grant Witheridge 2009 aThis document has been developed to provide assistance to erosion and sediment control practitioners in the planning, design, installation and maintenance of erosion and sediment control measures on construction and building sites.

Nongovernmental Organizations in World Bank-supported Projects Christopher J. N. Gibbs 1999 Nongovernmental organizations (NGOs) are important to the Bank because of the skills and resources they bring to emergency relief and development activities. In addition, they foster participation in the development process. The strength of the World Bank's collaboration with NGOs has grown since the late 1980s. In recognition of the added value that NGOs bring to Bank-supported projects, there have been intense efforts to include them. However, this report identifies a gap between promise and performance. The report concludes that the Bank's guidelines on working with NGOs are sound but that existing guidelines need to be used more effectively. The report makes recommendations to improve these partnerships and increase their benefit to development projects. It is written in English, French, and Spanish.

Healthcare as a Human Rights Issue Sabine Klotz 2017-02-28 This book deals with various facets of the human right to health: its normative profile as a universal right, current political and legal conflicts and contextualized implementation in different healthcare systems. The authors come from different countries and disciplines - law, political science, ethics, medicine etc. - and bring together a broad variety of academic and practical perspectives. The volume contains selected contributions of the international conference "The Right to Health - an Empty Promise?" held in September 2015 in Berlin and organized by the Emerging Field Initiative Project "Human Rights in Healthcare" (University of Erlangen-Nürnberg).

Establishing Native Plant Communities Elizabeth Ann Smreciu 2003 This book was written to fulfil the need for a document to address the specifics of native revegetation that are not adequately covered by a guideline. It assists anyone in Alberta who has to plan native plant revegetation projects or carryout the revegetation. It provides specific information on native revegetation planning, information sources, final land-use considerations, salvaging or otherwise obtaining native plant materials, field operations (site preparation, seeding, planting, ensuring establishment success), management, monitoring, and assessment. Appendices include a glossary, a list of Websites & contacts for further information, a methodology for calculating seeding rates, and a table showing native plant species & their characteristics.

Urban Runoff Quality Management Water Environment Federation 1998-01-01 This manual comprises a holistic view of urban runoff quality management. For the beginner, who has little previous exposure to urban runoff quality management, the manual covers the entire subject area from sources and effects of pollutants in urban runoff through the development of management plans and the design of controls. For the municipal stormwater management agency, guidance is given for developing a water quality management plan that takes into account receiving water use objectives, local climatology, regulation, financing and cost, and procedures for comparing various types of controls for suitability and cost effectiveness in a particular area. This guidance will also assist owners of large-scale urban development projects in cost-effectively and aesthetically integrating water quality control to the drainage plan. The manual is also directed to designers who desire a self-contained unit that discusses the design of specific quality controls for urban runoff.

NPDES Storm Water Sampling Guidance Document Washington Us Epa 1993-02-18 The NPDES Storm Water Sampling Guidance Document provides a comprehensive description of basic sampling requirements for NPDES storm water discharge permit applications and offers procedural guidance on how to conduct sampling. Many of the procedures in this manual are also applicable to the sampling requirements contained in NPDES storm water permits. Topics covered include background information and a summary of permit application requirements, the fundamentals of sampling (including obtaining flow data, handling samples, and sending them to the lab), analytical considerations, regulatory flexibility regarding storm water sampling, and health and safety considerations. This book will be a cornerstone of NPDES compliance for wastewater treatment plant managers and supervisors, consultants, laboratories, lab managers and chemists, regulators, current NPDES permit holders, and anyone applying for an NPDES permit.

Permeable Pavements Bethany Eisenberg 2015 Sponsored by the Low Impact Development Committee of the Urban Water Resources Research Council of the Environmental and Water Resources Institute of ASCE Permeable Pavements is a comprehensive resource for the proper design, construction, and maintenance of permeable pavement systems that provide a transportation surface and a best management practice for stormwater and urban runoff. A cornerstone for low impact development (LID) and sustainable site design, permeable pavements are considered a green infrastructure practice. They offer many environmental benefits, from reduced stormwater runoff and improved water quality to better site design and enhanced safety of paved surfaces. Commonly used for walkways, driveways, patios, and low-volume roadways as well as recreational areas, parking lots, and plazas, permeable pavements are appropriate for many different land uses, particularly in highly urbanized locations. This volume synthesizes today's knowledge of the technology, drawing from academia, industry, and the engineering and science communities. It presents an overview of typical permeable pavement systems and reviews the design considerations. Detailed design, construction, use, and performance information is provided for porous asphalt, pervious concrete, permeable interlocking concrete pavement, and grid pavements. Fact sheets and checklists help to successfully incorporate permeable pavement systems into design projects. Additional chapters summarize emerging technologies, maintenance considerations, hydrologic design approaches, key components for specification writing, and key areas for additional research. Appendixes include a fact sheet clarifying information on common concerns, as well as data tables summarizing water quality treatment performance and costs. Permeable Pavements is an essential reference for engineers, planners, landscape architects, municipalities, transportation agencies, regulatory agencies, and property owners planning to implement this best management practice for stormwater and urban runoff.

Water Bioengineering Techniques H. M. Schiechl 1997-01-30 Water and ground bioengineering techniques combine the expertise of civil engineers, landscape architects, botanists and ecologists, and increasingly are being used to protect and restore the natural environment. This practical handbook shows how vegetation can be used for the protection, stabilisation and ecological enhancement of riverbanks and shores. It covers a range of techniques from wholly vegetative 'soft' techniques to 'semi-hard' or composite structures with vegetative inclusions. A chapter on bioengineering techniques in earth dam and floodbank construction is also included. Together with its companion book, Ground Bioengineering Techniques, this handbook on water bioengineering provides a rare opportunity to gain insight into the approach of its chief proponents--Professor H.M. Schiechl and his colleague, Dr R. Stern--in the use of vegetation for the engineering and ecological and visual enhancement of waterways and shorelines. Water Bioengineering Techniques will be of interest to geotechnical engineers, botanists, ecologists and to those concerned with landscape planning, land and catchment management.

The Indigenous World 2011 Kathrin Wessendorf 2011 Published in both English and Spanish, The Indigenous World 2011 contains a comprehensive update on the current situation of indigenous peoples and their human rights, and provides an overview of the most important developments in international and regional processes during 2010. More than sixty scholars and activists contributed their insight and knowledge to the book with: region and country reports covering the indigenous world and updated information on international and regional processes relating to indigenous peoples. This book is an essential source of information, and an indispensable tool for readers interested in relevant issues that have impacted indigenous peoples worldwide.

Stormwater Monitoring Rebecca Kauten 2015-06-15 What are the best methods to monitor surface water quality? The author guides the reader to better understand the most efficient, accurate testing & monitoring methods, based on her years of experience. Topics include toxicity, Clean Water Act and NPDES requirements, MS4 minimum control

measures, water assessments, data collection, equipment, and building a monitoring plan.--Publisher.

Cost-effective and Sustainable Road Slope Stabilization and Erosion Control Laura Fay 2012 "In the United States it is estimated that 75 percent of all roads are low volume roads maintained by some 35,000 local agencies. Low volume roads often omit surface slope protection, and this can lead to slope failure, erosion, and maintenance, safety, and ecological issues. This report presents information on cost effective and sustainable road slope stabilization techniques, with a focus on shallow or near surface slope

stabilization and related erosion control methods used on low volume roads. To fully address this topic, planning and site investigation are discussed, as well as erosion control techniques, soil bioengineering and biotechnical techniques, mechanical stabilization, and earthwork techniques. Information presented in this report was obtained through an extensive literature review, and from survey and interview responses. From the survey responses, 30 individuals were interviewed based on the information they made available in the survey. A total of 25 interviews were conducted over the phone, and in two cases written responses were received"--Preface.
