TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019) 2019-11-19 U.S. Department of Health and Human Services Motivation is key to substance use behavior change. Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

Cognitive Interviewing 2004-09-14 Gordon B. Willis The design and evaluation of questionnaires—and of other written and oral materials—is a challenging endeavor, fraught with potential pitfalls. Cognitive Interviewing: A Tool for Improving Questionnaire Design describes a means of systematically developing survey questions through investigations that intensively probe the thought processes of individuals who are presented with those inquiries. The work provides general guidance about questionnaire design, development, and pre-testing sequence, with an emphasis on the cognitive interview. In particular, the book gives detailed instructions about the use of verbal probing techniques, and how one can elicit additional information from subjects about their thinking and about the manner in which they react to tested questions. These tools help researchers discover how well their questions are working, where they are failing, and determine what they can do to rectify the wide variety of problems that may surface while working with questionnaires.

Cultural Formulation 2008 Juan E. Mezzich The publication of the Cultural Formulation Outline in the DSM-IV represented a significant event in the history of standard diagnostic systems. It was the first systematic attempt at placing cultural and contextual factors as an integral component of the diagnostic process. The year was 1994 and its coming was ripe since the multicultural explosion due to migration, refugees, and globalization on the ethnic composition of the U.S. population made it compelling to strive for culturally attuned psychiatric care. Understanding the limitations of a dry symptomatological approach in helping clinicians grasp the intricacies of the experience, presentation, and course of mental illness, the NIMH Group on Culture and Diagnosis proposed to appraise, in close collaboration with the patient, the cultural framework of the patient's identity, illness experience, contextual factors, and clinician-patient relationship, and to narrate this along the lines of five major domains. By articulating the patient's experience and the standard symptomatological description of a case, the clinician may be better able to arrive at a more useful understanding of the case for clinical care purposes. Furthermore, attending to the context of the illness and the person of the patient may additionally enhance understanding of the case and enrich the database from which effective treatment can be planned. This reader is a rich collection of chapters relevant to the DSM-IV Cultural Formulation that covers the Cultural Formulation's historical and conceptual background, development, and characteristics. In addition, the reader discusses the prospects of the Cultural Formulation and provides clinical case illustrations of its utility in diagnosis and treatment of mental disorders. Book jacket.

Functional Somatic Symptoms in Children and Adolescents 2020-09-30 Kasia Kozłowska This open access book sets out the stress-system model for functional somatic symptoms in children and adolescents. The book begins by exploring the initial encounter between the paediatrician, child, and family, moves through the assessment process, including the formulation and the treatment contract, and then describes the various forms of treatment that are designed to settle the child's dysregulated stress system. This approach both provides a new understanding of how such symptoms emerge – typically, through a history of recurrent or chronic stress, either physical or psychological – and points the way to effective assessment, management, and treatment that put the child (and family) back on the road to health and well-being.

Educating the Student Body 2013-11-13 Committee on Physical Activity and Physical Education in the School Environment Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.
