Microsoft Dynamics Nav 2009 Programming Cookbook 2010-10-20 Matt Traxinger You won't find any fluff here. This book is written in a direct, to-the-point style to help you get what you need and continue working in NAV. At the same time it provides enough explanation so that you understand what we are doing and why it is necessary. In many programming books you will find yourself searching through paragraph after paragraph to try to find what you are looking for. That's not the case here. Each recipe starts with a short description of what it will teach. It is immediately followed with directions, usually with illustrations, of how to perform the task. You will find the explanation of the code at the end, along with some advice for further reading or other tasks you might be

interested in. If you are a junior / entry-level NAV developer then the first half of the book is designed primarily for you. You may or may not have any experience programming. It focuses on the basics of NAV programming. It would be best if you have gone through a brief introduction to the NAV client. If you are a mid-level NAV developer, you will find the second half more useful. These chapters explain how to think outside of the NAV box when building solutions. Introduction to Client access license Gilad James, PhD An Introduction to Client Access License (CAL) is a license system widely used in the IT industry to regulate access to server software. CAL is a type of license that gives a user access permission to connect to a server and thus avail its various services. It is a type of license that comes with every Windows Server purchased. A CAL has to be purchased for every user or every device that requires access to the server. CALs come in various forms such as user CALs, device CALs. These licenses are essential in regulating access to server software such that organizations only use the software to an extent allowed by the license. CALs are usually purchased to enable end-users to be able to connect to a server and avail of its services. They are commonly used in organizations where employees use more than one device to access the server. The CAL system ensures that devices or users access the software according to the allowed limit, ensuring compliance with the license. CALs are especially useful in enterprises that find themselves in need of expanding their current infrastructure. When a company installs a new server or upgrades their current one, it has to purchase additional CALs to accommodate the new needs. The system is especially important in organizations seeking to stay compliant with licensing regulations, which if violated, can result in substantial penalties.

Microsoft Dynamics GP Workflow 2.0 Second Edition 2017-03-31 Ian Grieve Microsoft Dynamics GP is a popular enterprise resource planning (ERP) application used by tens of thousands of sites around the world to keep the accounting, financial, distribution and manufacturing functions running day in and day out. Dynamics GP includes a variety of tools and modules to assist in controlling processes and data; one of the major modules for this was the Dynamics Workflow module. However, this module had major flaws which very much limited its usefulness; it was slow, clunky and difficult to install, configure and maintain. As of Microsoft Dynamics GP 2013 R2 this Workflow module has been replaced with a new one; Workflow 2.0. This new module lives entirely within Dynamics GP itself, thereby removing the dependency on SharePoint; this has the dual benefit of making Workflow 2.0 easy to setup, configure workflow

processes and maintain on an ongoing basis. This book introduces the concepts of workflow and moves onto Workflow 2.0. It covers the creation of both simple and complex document based workflow processes, a non-document based workflow, how users interact with the workflow process, including email notifications and email actions, how to create custom table joins, before wrapping up with a step-by-step install and verification of the Web Services for Microsoft Dynamics GP.

Electronic Healthcare 2010-02-16 Patty Kostkova It is my great pleasure to introduce this special issue of LNSV comprising the sci- tific publications presented at ehealth 2009: The second Congress on Electronic Healthcare for the 21st Century, which took place in Istanbul, Turkey during September 23–25, 2009. Building on the first ehealth 2008 congress held in London, UK, the key topic of ehealth 2009 was investigating a realistic potential of the Internet in providing e- dence-based healthcare information and education to patients and global users. The proudly defined aim of ehealth 2009 -- bringing together the three medical sectors: academia, industry and global healthcare institutions -- was met and made the c- gress a truly unique event. The formal and informal discussions among the conference participants led to numerous stimuli for new collaborations. We accepted 26 full and 10 short technical

presentations by speakers from all over the world, having received over 80 submissions. In addition to two keynotes, the commercial angle was provided by invited industrial speakers representing a wide range of healthcare IT companies including Corinne Marsolier of Cisco, Glenn Kenneth Bruun (CSAM Health), Luis Falcón (Thymbra) and Johan Muskens (Philips Research Europe), as well as international healthcare organizations such as Med-e-Tel represented by the international coordinator Frederic Lievens.
