Some Drugs and Herbal Products 2016 International Agency for Research on Cancer This volume of the IARC Monographs provides an assessment of the carcinogenicity of 14 drugs and herbal products. The IARC Monographs Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to the drugs digoxin (widely prescribed for the treatment of chronic heart failure), pioglitazone (used for the treatment of type 2 diabetes mellitus), and hydrochlorothiazide (used to treat hypertension). Other agents evaluated included the drugs primidone, sulfasalazine, pentosan polysulfate sodium, and triamterene, and five herbal products (or their components): Aloe vera whole leaf extract, goldenseal root powder, Ginkgo biloba leaf extract, kava extract, and pulegone. In view of the limited agent-specific information available from epidemiological studies, assessments of these agents relied mainly on carcinogenicity bioassays to reach conclusions as to the carcinogenic hazard to exposed humans.

Quality Control Methods for Medicinal Plant Materials 1998 World Health Organization A collection of test procedures for assessing the identity, purity, and content of medicinal plant materials, including determination of pesticide residues, arsenic and heavy metals. Intended to assist national laboratories engaged in drug quality control, the manual responds to the growing use of medicinal plants, the special quality problems they pose, and the corresponding need for international guidance on reliable methods for quality control. Recommended procedures - whether involving visual inspection or the use of thin-layer chromatography for the qualitative determination of impurities - should also prove useful to the pharmaceutical industry and pharmacists working with these materials.

Chemistry and Technology of Soft Drinks and Fruit Juices 2016-01-15 Philip R. Ashurst Soft drinks and fruit juices are produced in almost every country in the world and their availability is remarkable. From the largest cities to some of the remotest villages, soft drinks are available in a variety of flavours and packaging. Over the last decade, soft drinks and fruit juices have been the subject of criticism by the health community and there is considerable pressure on beverage manufacturers to reduce, or even remove, the sugar content of these products. Chemistry and Technology of Soft Drinks and Fruit Juices, Third Edition provides an overview of the chemistry and technology of soft drinks and fruit juices, covering ingredients, processing, microbiology, traceability and packaging as well as global market trends. This fully revised edition now includes chapters on topics that have become prominent in the industry since publication of the previous edition namely: water use and treatment, and microbiology technologies. The book is directed at graduates in food science, chemistry or microbiology entering production, quality control, new product development or marketing in the beverage industry or in companies supplying ingredients or packaging materials to the beverage industry.

African Herbal Pharmacopoeia 2010 Thomas Brendler The African Herbal Pharmacopoeia (AfrHP) provides comprehensive, up to date botanical, commercial and phytochemical information on over fifty of the most important African medicinal plants. The technical data were made on plant samples sourced from across the continent. These monographs prepared by leading African scientists, have been reviewed by international experts. Additional data includes micro morphology of the plant material, distribution maps and TLC Chromatograms. These data are crucial for producers, collectors and traders in medicinal plants and

extracts as well as researchers, manufacturers and practitioners. The scope, quality and standard of these herbal monographs are comparable to those prepared in Europe, North America and Asia. Whilst this is the very first edition, it is being proposed to proceed to a second edition, quickly, as more plant species will be covered.

Herbal Medicine 2011-03-28 Iris F. F. The South African Herbal Pharmacopoeia 2022-11-24 Alvaro Viljoen The South African Herbal Pharmacopoeia: Monographs of Medicinal and Aromatic Plants is a collection of 25 original monographs of medicinal plants that are currently under commercialization or have the potential for commercialization into herbal medicinal products for the global marketplace. Chapters include a general overview covering synonyms, common names, conservation status, botany, geographical distribution, ethnopharmacology, commercialization, pharmacological evaluation, chemical profiling and quality control, including HPTLC fingerprint analysis, UPLC analysis, gas chromatography and mid-infrared spectroscopy analysis. Academics researching pharmacy and analytical chemistry will benefit from the detailed chemical profile on each species presented. Industrial manufacturers of herbal products, herbal medicines, cosmetics, food supplements, and national and international policymakers and regulators will benefit from the overview provided at the beginning of each chapter. Provides a comprehensive, up-to-date literature review on 25 medicinal plants of South Africa Documents quality control protocols for chemical fingerprinting and biomarker identification in plant material Includes updated safety profiles of medicinal plants

A Clinical Guide to Blending Liquid Herbs E-Book 2003-08-18 Kerry Bone This clinical guide and practical reference is ideal for those who use and combine liquid herbal remedies for the individual needs of the patient. With three introductory chapters, 125 monographs, and various glossaries and appendices, it covers the fundamental concepts of using liquid herbals, including how the remedies are made, quality issues, and dosage guidelines. The monographs include full prescribing information that covers actions, indications, contraindications, warnings and precautions, interactions, side effects, dosage, traditional usage, pharmacological research, clinical studies, and full references. Focuses solely on liquid herbal preparations — making it a must-have resource and the only book of its kind. Covers approximately 125 herb profiles in detail. Offers the widest range of research-backed information currently available on herbs. Begins with basic principles to give practitioners confidence in the accuracy and precision of their prescriptions. Written by one of the leading names in herbal medicine. Clinically relevant with quick access to dosage information, contraindications, and more.

The Essential Guide to Herbal Safety 2004-12-23 Simon Y Mills Winner of American Botanical Council's 2005 James A. Duke Botanical Literature Award, the Essential Guide to Herbal Safety offers a balanced and objective perspective on the principles of herbal medicine safety as well as the complex challenges relating to self-prescribed or professionally prescribed herbal medications and supplements. With contributions from leading international practitioners and authorities, it contains comprehensive reviews, in monograph format, of the published safety data for 125 common herbs. You'll also find coverage of issues of quality, interactions, adverse reactions, toxicity, allergy, contact sensitivity, and idiosyncratic reactions. Provides the most current information on safety issues in herbal medicine. Presents authoritative and credible safety information from two experienced herbal practitioners. Combines theoretical chapters with 125 well-researched monographs, making it the

most thorough and comprehensive text on the market for herbal safety in practice. Provides clear information using the most current evidence-based reviews, covering factors that influence herb safety, including the negative placebo effects (nocebo), various types of unpredictable effects, the basis for interactions between herbs and drugs, and quality issues. Uses an established grading system for assessing safety in pregnancy and lactation that is realistic and appropriate to herb use. Thoroughly critiques the dominant misinformation in the media and medical journals on herb safety issues. Contains 83 documented case studies on hepatotoxicity and the effects in relation to kava. Kava safety is a hot topic. Includes two useful appendices detailing herbal references for pregnancy and lactation considerations.

Phytochemical Profiling of Commercially Important South African Plants 2021-08-28 Alvaro Viljoen Phytochemical Profiling of Commercially Important South African Plants comprises a carefully selected group of plant species that are of interest to researchers and industry partners who would like to investigate the commercialization of plant species. The book presents 25 botanicals selected based on commercial relevance. For each of the species, the following topics are covered: botanical description and distribution, phytochemistry (including chemical structures), HPTLC fingerprint analysis, UPLC analysis, and GC analysis (the latter only in the case of essential oil-bearing species). Using standard methodology, high-level chromatographic fingerprints have been developed for better understanding. Different methods are succinctly summarized allowing for the rapid identification of botanical raw materials and formulated consumer products. This book will be extremely valuable to researchers in the field who wish to rapidly identify the constituents and for those who want to prepare formulations of plant material for commercial applications. This work will also be a valuable resource in the field of pharmacognosy. Comprehensive chemical profiling of each species Fingerprints developed for non-volatile and volatile constituents Methods succinctly summarized to ensure reproducibility

Bioactive Molecules and Medicinal Plants 2008-10-16 Kishan Gopal Ramawat This book on medicinal plant biotechnology covers recent developments in this field. It includes a comprehensive up-to-date survey on established medicinal plants and on molecules which gained importance in recent years. No recently published book has covered these carefully selected topics. The contributing scientists have been selected on the basis of their involvement in the related plant material as evident by their internationally recognised published work.

Medical Herbalism 2003-10-24 David Hoffmann A foundational textbook on the scientific principles of therapeutic herbalism and their application in medicine • A complete handbook for the medical practitioner • Includes the most up-to-date information on preparations, dosage, and contraindications • By the author of The Complete Illustrated Holistic Herbal Medical Herbalism contains comprehensive information concerning the identification and use of medicinal plants by chemical structure and physiological effect, the art and science of making herbal medicine, the limitations and potential of viewing herbs chemically, and the challenge to current research paradigms posed by complex plant medicines. It also includes information on toxicology and contraindications, the issues involved in determining dosage and formulation types for an individual, guides to the different measurement systems and conversion tables, and the pros and cons of both industrial and traditional techniques. With additional sections devoted to the principles of green medicine, the history of Western Herbalism, the variety of other medical modalities using medicinal plants, an extensive resource directory, and a discussion of treatments organized by body system, Medical Herbalism is the comprehensive textbook all students and practitioners of clinical herbalism need to develop their healing practices.

The Healing Power of Herbs 2004 Michael T. Murray If you don't believe the 80% of the world's population who depend on herbal remedies to treat common ailments, there is now a wealth of scientific research to substantiate the claims. If used properly, herbal medicine is powerful, effective and simple. THE HEALING POWER OF HERBS draws on scientific research to corroborate what many have known for years: herbs are the key to a longer, more healthful life. Inside you will find a directory to 37 common medicinal plants along with recommendations for treating 34 common health problems. Discover: - How licorice can be used to heal canker sores - How "ginkgo biloba" can be used to delay the effects of Alzheimer's disease - How garlic can be used to improve cholesterol levels - How green tea can be used to help prevent cancer - How bromelain can be used to heal athletic injuries

Countering the Problem of Falsified and Substandard Drugs 2013-06-20 Institute of Medicine The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

American Herbal Products Association's Botanical Safety Handbook, Second Edition 2013-03-15 Zoë Gardner Access to accurate, evidence-based, and clinically relevant information is essential to anyone who uses or recommends herbal products. With input from some of the most respected experts in herbal and integrative medicine, this completely revised edition of the American Herbal Products Association's Botanical Safety Handbook reviews both traditional knowledge and contemporary research on herbs to provide an authoritative resource on botanical safety. The book covers more than 500 species of herbs and provides a holistic understanding of safety through data compiled from clinical trials,

pharmacological and toxicological studies, medical case reports, and historical texts. For each species, a brief safety summary is provided for quick reference, along with a detailed review of the literature. Easily understood classification systems are used to indicate the safety of each listed species and the potential for the species to interact with drugs. Enhancements to the Second Edition include: Classification of each herb with both a safety rating and a drug interaction rating More references listed for each individual herb, vetted for accuracy Specific information on adverse events reported in clinical trials or case reports Safety-related pharmacology and pharmacokinetics of each herb, including drug interactions Additional information on the use of herbs by pregnant or lactating women Toxicological studies and data on toxic compounds Representing the core of the botanical trade and comprising the finest growers, processors, manufacturers, and marketers of herbal products, the mission of the AHPA is to promote the responsible commerce of herbal products. The American Herbal Products Association Botanical Safety Handbook, Second Edition ensures that this vision is attained. The book will be a valuable reference for product manufacturers, healthcare practitioners, regulatory agencies, researchers, and consumers of herbal products.

Leung's Encyclopedia of Common Natural Ingredients 2011-09-21 Ikhlas A. Khan The third edition of the unparalleled reference on natural ingredients and their commercial use This new Third Edition of Leung's Encyclopedia of Common Natural Ingredients: Used in Food, Drugs, and Cosmetics arrives in the wake of the huge wave of interest in dietary supplements and herbal medicine resulting from both trends in health and the Dietary Supplement and Health Education Act of 1994 (DSHEA). This fully updated and revised text includes the most recent research findings on a wide variety of ingredients, giving readers a single source for understanding and working with natural ingredients. The Encyclopedia continues the successful format for entries listed in earlier editions (consisting of source, description, chemical composition, pharmacology, uses, commercial preparations, regulatory status, and references). The text also features an easily accessible alphabetical presentation of the entries according to common names, with the index cross-referencing entries according to scientific names. This Third Edition also features: More than 50 percent more information than the Second Edition, reflecting the greatly increased research activity in recent years A new section on traditional Indian medicine, with information on nine commonly used herbs More than 6,500 references Two new appendices explaining and illustrating the botanical terminology frequently encountered in the text A revised and expanded index Leung's Encyclopedia of Common Natural Ingredients: Used in Food, Drugs, and Cosmetics, Third Edition will continue to provide a comprehensive compilation of the existing literature and prominent findings on natural ingredients to readers with an interest in medicine, nutrition, and cosmetics.

Culpeper's Medicine 2013-06-28 Graeme Tobyn Drawing on the writings of Nicholas Culpeper, the 17th-century herbalist, apothecary and astrologer, this updated, accessible introduction celebrates the holistic medical traditions of the West, and places Culpeper in his appropriate context as one of the forebears of modern holistic medicine and a prophet of the NHS. An extensive new introduction to the work comments on the latest research and developments in the area. The book traces the development of the Western holistic medical tradition from its origins in the natural philosophy of Ancient Greece to the work of Culpeper himself. It describes and explains the relationship between the four elements, the four humours and the four constitutional types: sanguine, choleric, melancholic and phlegmatic, as well as explaining the functional relationships of organs and body systems. The book explores the interconnectedness of psyche (mind) and soma (body) and includes a section on herbal medicine and therapeutics with a study of 20 common herbs, dietary suggestions and uses for culinary herbs. It also provides accessible information on astrology and the importance of the horoscope for holistic patient assessment. The book looks at the holistic approach to the preservation of health and prevention of disease, with explanations of the various disease states, their humoral medical diagnosis and treatment. An authoritative insight into the expanding world of holistic medicine, this book is an indispensable resource for medical herbalists, students of herbal medicine and all those interested in Western holistic medicine and its origins.

British Pharmacopoeia 2021 [print Edition] 2020-07-30 British Pharmacopoeia Commission Updated annually, the British Pharmacopoeia (BP) is the only comprehensive collection of authoritative official standards for UK pharmaceutical substances and medicinal products. It includes approximately 4,000 monographs which are legally enforced by the Human Medicines Regulations 2012. Where a BP monograph exists, medicinal products or active pharmaceutical ingredients sold or supplied in the UK must comply with the relevant monograph. All monographs and requirements of the European Pharmacopoeia (Ph. Eur.) are reproduced in the BP, making the BP a convenient and fully comprehensive set of standards that can be used across Europe and beyond.

The Health Effects of Cannabis and Cannabinoids 2017-03-31 National Academies of Sciences, Engineering, and Medicine Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda—outlining gaps in current knowledge and opportunities for providing additional insight into these issues—that summarizes and prioritizes pressing research needs.

Herbal Drugs and Fingerprints 2012-11-02 Devi Datt Joshi Evidence based herbal drugs are on hi-acceptance day by day due to health friendly nature compared to synthetic drugs. The active ingredients in herbal drugs are different chemical classes, e.g. alkaloids, coumarins, flavonoids, glycosides, phenols, steroids, terpenes etc., are identified at molecular level using current analytical practices, which are unique characteristic, as finger, so known as fingerprints. The fingerprints are used for assessment of quality consistency and stability by visible observation and comparison of the standardized fingerprint pattern, have scientific potential to decipher the claims made on these drugs for authenticity and reliability of chemical constituents, with total traceability, which starts from the proper identification, season and area of collection, storage, their processing, stability during processing, and rationalizing the combinational in case of polyherbal drugs. These quality oriented

documents have ample scientific logics so well accepted globally by regulatory authorities and industries, to determine intentional/unintentional contamination, adulteration, pollutants, stability, quality, etc. parameters. Based on geo-climatic factors, a same plant species has different pharmacological properties due to different ingredients; such regional and morphological variations are identified by fingerprints, at the time of collection of the medicinal herb. The chromatographic (TLC, HPTLC, HPLC, GC,) and spectral (UV-Vis., FTIR, MNR, MS, LC-MS, GC-MS etc.) techniques have world-wide strong scientific approval as validated methods to generate the fingerprints of different chemical classes of active ingredients of herbal drugs. Presently there is a need for a book having all the fingerprinting techniques for herbal drugs at a place with theory, case studies and art to discover patentable forms. The present book is a mile stone in the subject, to be utilized by Scientists, Medical Doctors, Technicians, Industrialists, Researchers, and Students both in PG and UG levels.

Botanical Dietary Supplements: 2001-06-01 Gail B. Mahady This volume provides reviews and details of the quality, safety and efficacy for some of the top-selling botanicals worldwide, including black cohosh, chamomile, comfrey, echinacea, garlic, ginkgo, ginseng, kava, milk thistle, St John's wort and valerian. The work was written based on a systematic review of the scientific literature from 1975-2000.; Each review includes a brief introduction, a section on quality including a definition of the crude drug, geographical distribution, and a listing of the major chemical constituents. The safety and efficacy sections summarize the medical uses, pharmacology, contraindications, warnings, precautions, adverse reactions, dose and dosage forms. The safety and efficacy sections were written for a busy health-care professional, and should enable one to ascertain which clinical uses are supported by clinical data, without having to read through all the pharmacology. Each chapter is fully referenced, enabling the reader to access further information when necessary.

Adverse Effects of Herbal Drugs 2012-12-06 This book series gives a comprehensive overview of the adverse effects of botanical medicines. It provides introductory information on Botany, Chemistry, Pharmacology and Uses, followed by an Adverse Reaction Profile subdivided according to organ and function. The third contribution to the series gives important information about eighteen specific medicinal herbs and important plant constituents. The herbs and constituents have been selected for several reasons, such as a prominent place in phytotherapy, clinical expectations about therapeutic potential and recent concern about a serious adverse reaction. The World Health Organization Regional Office for Europe (Copenhagen) has supported the book in the form of an acknowledgement that has been prepared by this Office.

Stockley's Drug Interactions 2010 Karen Baxter Stockley's Drug Interactions, now fully revised and revalidated, remains the world's most comprehensive and authoritative reference book on drug interactions and provides the busy healthcare professional with quick and easy access to clinically relevant, evaluated and evidence-based information on drug interactions. Contains detailed yet concise monographs: covers interactions between therapeutic drugs, proprietary medicines, herbal medicines, foods, drinks, pesticides and drugs of abuse; based on published sources and fully referenced; provides comprehensive details of the clinical evidence for the interactions under discussion, an assessment of their clinical importance and gives clear guidance on how to manage the interaction in practice; contains over 3,400 monographs; New drugs launched in the last two years added - including drugs such as

fesoterodine, several monoclonal antibodies, new antidiabetics (e.g. sitagliptin) new antineoplastics (e.g. dasatinib) and new immunosuppressants (e.g. temsirolimus); updated information on seasonal flu vaccines and antivirals, including all available information on possible interactions with concurrent medication; increased commentary on the involvement of newer mechanisms in drug interactions, such as drug transporter proteins, and other genetic factors that affect the ability of individuals to metabolise medicines.
