Ophthalmology Examinations  
Review, The (Third Edition)  
2019-05-29 Tien Yin Wong Since  
the last Edition of Ophthalmology  
Examinations Review, there has  
been major new discovery in the  
understanding of common eye  
diseases, and new treatments and  
diagnostic procedures have been  
refined or newly developed. A  
revised Edition reflecting these  
changes is warranted at this time.  
The aim and scope of the book will  
be consistent with the previous two  
editions in that it will provide a  
broad review for the final year  
ophthalmology resident and trainees  
taking the specialist ophthalmology  
examinations. The book deals  
primarily with key facts and topics  
that are important from an  
examination perspective. Only  
information and facts that are  
considered relevant and critical to  
the exams are covered, with topics  
that may be of scientific interest, but  
are not common to exams  
specifically left out. **This book is

help the resident organize and synthesize knowledge acquired from various other sources or textbooks. While not meant to replace standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a 'model opening statement,' followed by a classification system to aid organization of facts and then by the bulk of the answer in concise short notes. Exam Tips are inserted to provide an insight into how to answer different types of questions and when appropriate, a Clinical Approach section is also included. In the new edition, topics such as new understanding of disease mechanisms, new investigations (e.g. OCT), and new procedures and treatment (e.g. use of anti-vascular endothelial growth factors, new refractive surgical techniques, new corneal transplant) are covered.
