A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Various models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.
