Unlike smoking cessation medications and nicotine replacement therapy products, acupuncture does not employ chemically manufactured substances. There is also no risk of weight gain during therapy. In conjunction with helping a patient quit smoking, it can also curb appetite, thus reducing food cravings. If you have tried several methods in smoking cessation to no avail, perhaps it is high time you consider the alternative method that is acupuncture. With the right practitioner and the right frame of mind, there is no reason why you won't be nicotine-free before long.

You need never fear the thought of needles ever again. Acupuncture is a beneficial treatment with a long history of effectiveness. It is used to complement current medical therapy and should not replace currently existing medications or treatments.

Like other strategies used in treating health conditions, acupuncture may have some side effects.

Medications have side effects and allergic reactions, surgeries have risk of infection and complications. For needle puncture, there is a risk of injury, rare infections, minor bleeding, small bruises, and some dizziness.

You can minimize the possible side effects by choosing a licensed acupuncturist. Most countries either have government licensing in place or have professional organizations with very strict rules and regulations.

How do treatments go?

An acupuncturist will do an initial evaluation of your medical history and your body's current state. Multiple pressure points are palpated, and a regimen of treatment is formulated. Most courses involve a series of 10 to 20 treatment sessions, each lasting 30 to 90 minutes. Needles will be carefully placed at the required points and kept in place for some time. Most patients report a feeling of mild sensation at the site of the puncture, but no real pain.

In order to treat it, the specialist must relieve the tension by inserting needles into the body to

improve the blood flow to the brain thus reducing the pain experienced during an attack.

Eight Myths About Acupuncture

There are a lot of myths with regards to acupuncture. Some of these are true; others are silly while the rest only have a half truth. As you read on, you will learn which ones are worth believing.

The first myth is that acupuncture is painful. This is not true because those who have tried it claimed they only experienced a tiny prick while others did not feel anything at all. There is no tissue damage when the needle is inserted into the skin or pulled out and only in very rare cases are there traces of bruising.

The second myth is that you can get hepatitis or AIDS from acupuncture. This is true only if the

needles used are not sterilized. In the US, this will never happen because acupuncturists are required to use disposable needles thus you are not at risk from these two diseases.

If, like me, you have quite a fear of needles and injections, then acupuncture, that practice of sticking needles onto different parts of your body to cure sicknesses might seem scary at first.

However, if you've been long been suffering from some problems like headaches or chronic pains and your regular visits to the doctor don't seem to be helping you, then why not consider a trip to an acupuncture specialist? After all, who hasn't heard of somebody's aunt somewhere suffering from arthritis and trying out everything that the doctors recommended all to no avail, only to finally be cured by a really good acupuncturist?

Perhaps you were wondering if it could actually work for you. You might feel a bit skeptical since traditional Chinese medicine doesn't immediately coincide with theories in modern Western medicine. In fact, the use of needles to cure people was discovered thousands of years ago in China long before microscopes or x-ray machines were invented or before bacteria and germs were discovered.

follicles. Acne results from the clogging of sebaceous glands leading to the formation of pimples and cysts. The condition usually begins with the onset of puberty. Going by the facts, as teens attain puberty the androgens also called male sex hormones are produced in high number leading to sebaceous glands becoming over active which results in sebum being produced in high proportions. Sebum, which is nothing but oil is produced by sebaceous glands which travel to the skin surface through hair follicles. But, skin cells block the follicles which results in oil also being blocked. When these hair follicles are blocked it results in the development of skin bacteria known as *Propionibacterium Acnes* within the follicles which in turn results in swelling of the skin called Acne. If the hair follicles are partially blocked it results in blackheads. If the follicles are completely blocked they result in whiteheads. But if these plugged follicles are not treated they ultimately burst causing the oil, bacteria and skin cells to spill all over the skin resulting in irritation and formation of pimples. Acne can be shallow as well as deep in various individuals depending on the nature of skin and amount of oil produced.

A Primer on Medical Acupuncture

Have you ever had an uncontrollable urge to be pierced by a dozen needles? This is the image most people get when someone mentions the word “acupuncture”. It comes as no surprise that most view this technique with suspicion, even downright horror. The fact is, however, that this relatively painless ancient Chinese technique has helped relieve the symptoms of millions of people. Properly used, it can help in the management of many medical conditions including chronic pain and fatigue.

How does needle puncture work?

Practitioners of Chinese traditional medicine believe in energy flows. This energy, called Qi, circulates around the body using pathways called meridians. Meridians run very close to the surface of the skin in certain areas and can be accessed by needles. Much like plumbing, these pipes can get blocked or go the wrong way, causing health problems. The insertion of needles at these points is aimed to help loosen blocks and normalize flow.
