Text Genetics in Literary Modernism and other Essays 2018-02-20 Hans Walter Gabler This collection of essays from world-renowned scholar Hans Walter Gabler contains writings from a decade and a half of retirement spent exploring textual criticism, genetic criticism, and literary criticism. In these sixteen stimulating contributions, he develops theories of textual criticism and editing that are inflected by our advance into the digital era; structurally analyses arts of composition in literature and music; and traces the cultural implications discernible in book design, and in the canonisation of works of literature and their authors. Distinctive and ambitious, these essays move beyond the concerns of the community of critics and scholars. Gabler responds innovatively to the issues involved and often endeavours to re-think their urgencies by bringing together the orthodox tenets of different schools of textual criticism. He moves between a variety of topics, ranging from fresh genetic approaches to the work of James Joyce and Virginia Woolf, to significant contributions to the theorisation of scholarly editing in the digital age. Written in Gabler's fluent style, these rich and elegant compositions are essential reading for literary and textual critics, scholarly editors, readers of James Joyce, New Modernism specialists, and all those interested in textual scholarship and digital editing under the umbrella of Digital Humanities.

From Xenakis's UPIC to Graphic Notation Today 2020-04-20 Richard Barrett On the legacy of Xenakis' innovations in music notation for contemporary composers Trained in mechanical engineering, Greek-French composer Iannis Xenakis (1922-2001) transformed mathematical models into architectonic musical entities. In the late 1970s Xenakis developed a digital apparatus that rendered waveforms drawn on a tablet as musical compositions. The device was called UPIC, or Unité Polyagogique Informatique du CEMAMu, named for the French contemporary music research institute that Xenakis had helped found a decade earlier. The device proved to be an essential tool for the development of contemporary music--a version of the software is still used by today's composers. Featuring archival materials, this book

examines the origins of Xenakis' UPIC. It also serves as a compositional tool: embedded QR codes allow readers to create their own sound-images from UPIC compositions.

Reflections of a Technocrat - Managing Defense, Air, and Space Programs During the Cold War 2012-08-01 John L. McLucas Reflections of a Technocrat is an autobiography that ends as a biography. John McLucas died on the first of December 2002, at the age of 82, with all but the last chapter remaining to be started. He had been preparing to do a memoir, on and off, for many years, but only in the late 1990s, as declining health caused him to cut back on other commitments, did he devote a large part of his energies to getting the job done. To help complete this project, he engaged me—Ken Alnwick—a retired Air Force pilot and defense analyst, and my associate, Larry Benson, a recently retired Air Force historian. We are both grateful for the opportunity of getting to know John and his gracious wife, Harriet, as well as to research and help write about the many people, institutions, technical achievements, and national security issues with which he was associated. Chief among his numerous affiliations was the US Air Force. He began his civilian career with the Army Air Forces right after World War II and continued to advance the Air Force mission as a reserve officer, defense contractor, government executive, and valued consultant for the rest of the century. Not long before John died, he and Harriet decided the time had come to move out of their spacious home in Alexandria, Virginia, to a more manageable apartment in The Fairfax, a pleasant retirement community at nearby Fort Belvoir. In anticipation of the move, John decided to donate the bulk of his papers, professional library, and much of his memorabilia to two schools he admired: the Air Force Academy and Embry- Riddle Aeronautical University, with additional papers offered to the Comsat Alumni Association. His files helped shed light on every phase of his career up to and including recent activities as a director at Orbital Sciences Corporation, chairman of the Arthur C. Clarke Foundation, trustee of the Air Force Historical Foundation, and contributing member of several other public service organizations. The process was not easy. Each dusty box released a flood of memories as we went through the agonizing process of deciding what to keep, what to send to the repositories, what to give away, and what to relegate to recycling bins or the county landfill.

Re-Centring the City 2020-10-09 Michal Murawski What is the role of monumentality, verticality and centrality in the twenty-first century? Are palaces, skyscrapers and grand urban ensembles obsolete relics of twentieth-century modernity, inexorably giving way to a more humble and sustainable de-centred urban age? Or do the aesthetics and politics of pomp and grandiosity rather linger and even prosper in the cities of today and tomorrow? Re-Centring the City zooms in on these questions, taking as its point of departure the experience of Eurasian socialist cities, where twentieth-century high modernity arguably saw its most radical and furthest-reaching realisation. It frames the experience of global high modernity (and its unravelling) through the eyes of the socialist city, rather than the other way around: instead of explaining Warsaw or Moscow through the prism of Paris or New York, it refracts London, Mexico City and Chennai through the lens of Kyiv, Simferopol and the former Polish shtetls. This transdisciplinary volume re-centres the experiences of the 'Global East', and thereby our understanding of world urbanism, by shedding light on some of the still-extant (and often disavowed) forms of 'zombie' centrality, hierarchy and violence that pervade and shape our contemporary urban experience. Writing the Character-Centered Screenplay, Updated and Expanded edition 2000-02-23 Andrew Horton "We need good screenwriters who understand character." Everywhere Andrew Horton traveled in researching this book—from Hollywood to Hungary—he heard the same refrain. Yet most of the standard how-to books on screenwriting follow the film industry's earlier lead in focusing almost exclusively on plot and formulaic structures. With this book, Horton, a film scholar and successful screenwriter, provides the definitive work on the character-based screenplay. Exceptionally wide-ranging—covering American, international, mainstream, and "off-Hollywood" films, as well as television—the book offers creative strategies and essential practical information. Horton begins by placing screenwriting in the context of the storytelling tradition, arguing through literary and cultural analysis that all great stories revolve around a strong central character. He then suggests specific techniques and concepts to help any writer—whether new or experienced—build more vivid characters and screenplays. Centering his discussion around four film examples—including *Thelma & Louise* and *The Silence of the Lambs*—and the television series, *Northern Exposure*, he takes the reader step-by-step through the screenwriting process, starting with the development of multi-dimensional characters and continuing through to rewrite. Finally, he includes a wealth of information about contests, fellowships, and film festivals. Espousing a new, character-based approach to screenwriting, this engaging, insightful work will prove an essential guide to all of those involved in the writing and development of film scripts.

Digital Light 2020-10-09 Daniel Palmer Light symbolises the highest good, it enables all visual art, and today it lies at the heart of billion-dollar industries. The control of light forms the foundation of contemporary vision. Digital Light brings together artists, curators, technologists and media archaeologists to study the historical evolution of digital light-based technologies. Digital Light provides a critical account of the capacities and limitations of contemporary digital light-based technologies and techniques by tracing their genealogies and comparing them with their predecessor media. As digital light remediates multiple historical forms (photography, print, film, video, projection, paint), the collection draws from all of these histories, connecting them to the digital present and placing them in dialogue with one another. Light is at once universal and deeply historical. The invention of mechanical media (including photography and cinematography) allied with changing print technologies (half-tone, lithography) helped structure the emerging electronic media of television and video, which in turn shaped the bitmap processing and raster display of digital visual media. Digital light is, as Stephen Jones points out in his contribution, an oxymoron: light is photons, particulate and discrete, and therefore always digital. But photons are also waveforms, subject to manipulation in myriad ways. From Fourier transforms to chip design, colour management to the translation of vector graphics into arithmetic displays, light is constantly disciplined to human purposes. In the form of fibre optics, light is now the infrastructure of all our media; in urban plazas and handheld devices, screens have become ubiquitous, and also standardised. This collection addresses how this occurred, what it means, and how artists, curators and engineers confront and challenge the constraints of increasingly normalised digital visual media. While various art pieces and other content are considered throughout the collection, the focus is specifically on what such pieces suggest about the intersection of technique and technology. Including accounts by prominent artists and professionals, the collection emphasises the centrality of use and experimentation in the shaping of technological platforms. Indeed, a recurring theme is how techniques of previous media become technologies, inscribed in both digital software and hardware. Contributions include considerations of image-oriented software and file formats; screen technologies; projection and urban screen surfaces; histories of computer graphics, 2D and 3D image editing software, photography and cinematic art; and transformations of light-based art resulting from the distributed architectures of the internet and the logic of the database. Digital Light brings together high profile figures in diverse but increasingly convergent fields, from academy award-winner and co-founder of Pixar, Alvy Ray Smith to feminist philosopher Cathryn Vasseleu. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. The People on the Beach 2020-12-15 Rosie Whitehouse One summer's night in 1946, over 1,000 European Jews waited silently on an Italian beach to board a secret ship. They had survived Auschwitz, hidden and fought in forests and endured death marches--now they were taking on the Royal Navy, running the British blockade of Palestine. From Eastern Europe to Israel via Germany and Italy, Rosie Whitehouse follows in the footsteps of those secret passengers, uncovering their extraordinary stories--some told for the first time. Who were those people on the beach? Where and what had they come from, and how had they survived? Why, after being liberated, did so many Jews still feel unsafe in Europe? How do we--and don't we--remember the Holocaust today? This remarkable, important book digs deep and travels far in search of answers.

Prime Time Soap Operas on Indian Television 2020-02-18 Shoma Munshi This book examines the phenomenon of prime time soap operas on

Indian television. An anthropological insight into social issues and practices of contemporary India through the television, this volume analyzes the production of soaps within India's cultural fabric. It deconstructs themes and issues surrounding the "everyday" and the "middle class" through the fiction of the "popular". In its second edition, this still remains the only book to examine prime time soap operas on Indian television. Without in any way changing the central arguments of the first edition, it adds an essential introductory chapter tracking the tectonic shifts in the Indian "mediascape" over the past decade - including how the explosion of regional language channels and an era of multiple screens have changed soap viewing forever. Meticulously researched and persuasively argued, the book traces how prime time soaps in India still grab the maximum eyeballs and remain the biggest earners for TV channels. The book will be of interest to students of anthropology and sociology, media and cultural studies, visual culture studies, gender and family studies, and also Asian studies in general. It is also an important resource for media producers, both in content production and television channels, as well as for the general reader.

Historical Dictionary of World War II Intelligence 2007-11-12 Nigel West In the years immediately following World War II, information was disclosed about what has been termed the shadow war of the existence of hitherto secret agencies. In Germany it was the *Abwehr* and the *Sicherheitsdienst*; in Britain it was MI5, the Secret Intelligence Service (MI6) and Special Operations Executive (SOE); in the United States it was the Office of Strategic Services (OSS) and the Special Intelligence Service (SIS) of the Federal Bureau of Investigation (FBI); in Japan it was the *Kempeitai*; and in Italy the *Servizio di Informazione Militare* (SIM). Sixty years after World War II secrets are still being revealed about the covert activities that took place. Many countries had secret agencies maintaining covert operations, but even ostensibly neutral countries also conducted secret operations. Changes in American, British, and even Soviet official attitudes to declassification in the 1980s allowed thousands of secret documents to be made available for public examination, and the result was extensive revisionism of the conventional histories of the conflict, which previously had excluded references to secret intelligence sources. The *Historical Dictionary of World War II Intelligence* tells the emerging history of the intelligence world during World War II. This is done through a chronology, an introduction, a bibliography, and hundreds of cross-referenced dictionary entries on the secret agencies, operations, and events. The world of double agents, spies, and moles during WWII is explained in the most comprehensive reference currently available.

The Dream Endures 2002-11-28 Kevin Starr What we now call "the good life" first appeared in California during the 1930s. Motels, home trailers, drive-ins, barbecues, beach life and surfing, sports from polo and tennis and golf to mountain climbing and skiing, "sportswear" (a word coined at the time), and sun suits were all a part of the good life--perhaps California's most distinctive influence of the 1930s. In *The Dream Endures*, Kevin Starr shows how the good life prospered in California--in pursuits such as film, fiction, leisure, and architecture--and helped to define American culture and society then and for years to come. Starr previously chronicled how Californians absorbed the thousand natural shocks of the Great Depression--unemployment, strikes, Communist agitation, reactionary conspiracies--in *Endangered Dreams*, the fourth volume of his classic history of California. In *The Dream Endures*, Starr reveals the other side of the picture, examining the newly important places where the good life flourished, like Los Angeles (where Hollywood lived), Palm Springs (where Hollywood vacationed), San Diego (where the Navy went), the California Institute of Technology in Pasadena (where Einstein went and changed his view of the universe), and college towns like Berkeley. We read about the rich urban life of San Francisco and Los Angeles, and in newly important communities like Carmel and San Simeon, the home of William Randolph Hearst, where, each Thursday afternoon, automobiles packed with Hollywood celebrities would arrive from Southern California for the long weekend at Hearst Castle. The 1930s were the heyday of the Hollywood studios, and Starr brilliantly captures Hollywood films and the society that surrounded the studios. Starr offers an astute discussion of the European refugees who arrived in Hollywood during the period: prominent European film actors and artists and the creative refugees who were drawn to Hollywood and Southern California in these years--Igor Stravinsky, Arnold Schoenberg, Man Ray, Bertolt Brecht, Christopher Isherwood, Aldous Huxley, Thomas Mann, and Franz Werfel. Starr gives a fascinating account of how many of them attempted to recreate their European world in California and how others, like Samuel Goldwyn, provided stories and dreams for their adopted nation. Starr reserves his greatest attention and most memorable writing for San Francisco. For Starr, despite the city's beauty and commercial importance, San Francisco's most important achievement was the sense of well-being it conferred on its citizens. It was a city that "magically belonged to everyone." Whether discussing photographers like Edward Weston and Ansel Adams, "hard-boiled fiction" writers, or the new breed of female star--Marlene Dietrich, Jean Harlow, Bette Davis, Carole Lombard, and the improbable Mae West--*The Dream Endures* is a brilliant social and cultural history--in many ways the most far-reaching and important of Starr's California books.

The Light of the World 2016-03-01 Joseph ibn Nahmias This book contains an edition—with an extensive introduction, translation and commentary—of *The Light of the World*, a text on theoretical astronomy by Joseph Ibn Nahmias, composed in Judeo-Arabic around 1400 C.E.

in the Iberian Peninsula. As the only text on theoretical astronomy written by a Jew in any variety of Arabic, this work is evidence for a continuing relationship between Jewish and Islamic thought in the late fourteenth and early fifteenth centuries. The text's most lasting effect may have been exerted via its passage to Renaissance Italy, where it influenced scholars at the University of Padua in the early sixteenth century. With its crucial role in the development of European astronomy, as well as the physical sciences under Islam and in Jewish culture, *The Light of the World* is an important episode in Islamic intellectual history, Jewish civilization, and the history of astronomy.

Rumba Under Fire: The Arts of Survival from West Point to Delhi 2016 Irina Dumitrescu A professor of poetry uses a deck of playing cards to measure the time until her lover returns from Afghanistan. Congolese soldiers find their loneliness reflected in the lyrics of rumba songs. Survivors of the siege of Sarajevo discuss which book they would have never burned for fuel. A Romanian political prisoner writes her memoir in her head, a book no one will ever read. These are the arts of survival in times of crisis. Rumba Under Fire proposes we think differently about what it means for the arts and liberal arts to be “in crisis.” In prose and poetry, the contributors to Rumba Under Fire explore what it means to do art in hard times. How do people teach, create, study, and rehearse in situations of political crisis? Can art and intellectual work really function as resistance to power? What relationship do scholars, journalists, or even memoirists have to the crises they describe and explain? How do works created in crisis, especially at the extremes of human endurance, fit into our theories of knowledge and creativity?

Reflections of a Technocrat 2017-05-11 Air University Press Reflections of a Technocrat is an autobiography that ends as a biography. John McLucas died on the first of December 2002, at the age of 82, with all but the last chapter remaining to be started. He had been preparing to do a memoir, on and off, for many years, but only in the late 1990s, as declining health caused him to cut back on other commitments, did he devote a large part of his energies to getting the job done. To help complete this project, he engaged me - Ken Alnwick - a retired Air Force pilot and defense analyst, and my associate, Larry Benson, a recently retired Air Force historian. His career choices led him into a wider variety of scientific, technical, and defense management positions than almost any of his contemporaries. In the field of aviation, for example, John was the only person to have held the positions of both secretary of the Air Force and administrator of the Federal Aviation Administration. As someone who had a great respect for history, he wanted to add to the record of what had transpired during his tenure in these and other important positions and to share his perspectives on what it meant to lead technology-oriented organizations. He was also a staunch advocate for the peaceful and unifying aspects of space endeavors and saw this book as another venue to espouse this cause, which had engaged him for over two decades and been the theme of his previous book, Space Commerce. John McLucas accrued almost 50 years' experience on both sides of the government procurement table. From that perspective, he also hoped to analyze various acquisition strategies, such as the value of prototyping (which he had employed with great success to bring the A-10 and F-16 aircraft to fruition) and a

willingness to accept risks when appropriate. As preparations for the book proceeded, he conducted numerous interviews with senior active duty and retired defense officials on the subject of acquisition reform. He was never quite able, however, to coalesce this research into a more comprehensive theory for the defense acquisition process beyond his passionate support for competitive "fly-offs" of major weapon systems and for reinvigorating the roles of the service secretaries and their military chiefs as a counterpoint to what he saw as an unhealthy concentration of power in the Office of the Secretary of Defense. Contents: Chapter 1 - From Country Boy to Company President * Chapter 2 - Career Broadening in Science and Technology * Chapter 3 - My Air Force Years People and Politics * Chapter 4 - Modernizing the Force - New Systems for Future Air Supremacy * Chapter 5 - What Can Now Be Told - The National Reconnaissance and Air Force Space Programs * Chapter 6 - Facing Other Issues-Overseas and at Home * Chapter 7 - Managing Civil Aviation and Commercial Space Programs * Chapter 8 - Promoting Space, Science, and Technology
