Chapter 4 of the Holt Chemistry textbook, titled “The Periodic Table”, provides a comprehensive overview of the table of elements and its constituents. The chapter begins with a discussion on the characteristics of groupings and periodic groups, clarifying how Russian chemist Mendeleev ordered elements by their atomic weight in increasing order1. It then dives into the idea of valence electrons and levels of energy of atoms, emphasizing the function of these electrons in chemical reactions and changes to atomic structures and molecules.

The chapter additionally distinguishes between transition elements and main elements, expounding on their features and characteristics. It also explains the notion of ionization energy and its trends among groups and periodic groups on the periodic table1. The chapter discusses atom’s and radii, and how these can be predicted based on an element’s position on the periodic table.

The concept of electronegativity, which calculates an element’s inclination to attract a pair of bonding electrons, is another key topic addressed in this chapter1. The chapter ends with a discussion on the relationship diagonally, metallic character, and point of boiling of components.

In terms of practice questions, the chapter provides a variety of questions and test preparation materials to strengthen the ideas understood. These exercises cover a array of topics, from understanding the organization of constituents to studying the tendencies in the periodic table.
