Fuzzy Systems and Data Mining VII

2021-11-04 C. Shen Fuzzy systems and data mining are indispensable aspects of the computer systems and algorithms on which the world has come to depend. This book presents papers from FSDM 2021, the 7th International Conference on Fuzzy Systems and Data Mining. The conference, originally due to take place in Seoul, South Korea, was held online on 26-29 October 2021, due to ongoing restrictions connected with the COVID-19 pandemic. The annual FSDM conference provides a platform for knowledge exchange between international experts, researchers, academics and delegates from industry. This year, the committee received 266 submissions, and this book contains 52 papers, including keynotes and invited presentations, oral and poster contributions. The papers cover four main areas: 1) fuzzy theory, algorithms and systems - including topics like stability; 2) fuzzy applications - which are widely used and cover various types of processing as well as hardware and architecture for big data and time series; 3) the interdisciplinary field of fuzzy logic and data mining; and 4) data mining itself. The topic most frequently addressed this year is fuzzy systems. The book offers an overview of research and developments in fuzzy logic and data mining, and will be of interest to all those working in the field of data science.

Moving toward Universal Coverage of Social Health Insurance in Vietnam

2014-06-26 Aparnaa Somanathan Over the past two decades Vietnam has made enormous progress towards achieving universal coverage (UC) for its population. Significant challenges remain, however, in terms of improving equity with continuing low rates of enrollment. Ensuring financial protection also remains an elusive goal. The Master Plan for Universal Coverage approved in 2012 by the Prime Minister directly addresses both these deficiencies in coverage. The objective of this report is to assess the implementation of Vietnam SHI and provide options for moving towards UC. This is a joint assessment with development partners, World Health Organization, United Nations Children's Fund (Unicef) and Rockefeller Foundation. Expanding breadth of coverage, particularly for those hard to reach groups such as the near-poor and informal sector would require substantially increasing general revenue subsidies and fully subsidizing the premiums for the near-poor. High enrollment rates would, however, have little impact on financial protection and equity if OOP costs remain high. Achieving UC will require sustained efforts to improve efficiency in the system, and gain better value for money from available budgetary resources; without these efforts, any further progress towards UC would be financially unsustainable. There is considerable scope for improving efficiency in Vietnam. Fragmentation in the pooling of funds gives rise to unnecessary costs. Inefficiencies in resource allocation and purchasing arrangements include: (i) an overly generous benefits package; (ii) provider payment mechanisms and the mix of incentives facing providers which result in an oversupply of services; (iii) high prices, overconsumption and inappropriate use of pharmaceuticals; and (iv) the structure and incentives embedded within the delivery system. The organization, management and governance of SHI are fragmented and often dysfunctional. The present institutional setting for SHI needs to be assessed and changed.

Republicanism, Communism, Islam

2021-05-15 John T. Sidel In *Republicanism, Communism, Islam*, John T. Sidel provides an alternate vantage point for understanding the variegated forms and trajectories of revolution across the Philippines, Indonesia, and Vietnam, a perspective that is de-nationalized, internationalized, and transnationalized. Sidel positions this new vantage point against the conventional framing of revolutions in modern Southeast Asian history in terms of a nationalist template, on the one hand, and distinctive local cultures and forms of consciousness, on the other. Sidel's comparative analysis shows how—in very different, decisive, and often surprising ways—the Philippine, Indonesian, and Vietnamese revolutions were informed, enabled, and impelled by diverse cosmopolitan connections and international conjunctures. Sidel addresses the role of Freemasonry in the making of the Philippine revolution, the importance of Communism and Islam in Indonesia's Revolusi, and the influence that shifting political currents in China and anticolonial movements in Africa had on Vietnamese revolutionaries. Through this assessment, Republicanism, Communism, and Islam tracks how these forces, rather than nationalism per se, shaped the forms of these revolutions, the ways in which they unfolded, and the legacies which they left in their wakes.

Pattern Recognition

2003-05-15 Sergios Theodoridis Pattern recognition is a scientific discipline that is becoming increasingly important in the age of automation and information handling and retrieval. *Pattern Recognition, 2e* covers the entire spectrum of pattern recognition applications, from image analysis to speech recognition and communications. This book presents cutting-edge material on neural networks, - a set of linked microprocessors that can form associations and uses pattern recognition to "learn" -and enhances student motivation by approaching pattern recognition from the designer's point of view. A direct result of more than 10 years of teaching experience, the text was developed by the authors through use in their own classrooms. *Approaches pattern recognition from the designer's point of view *New edition highlights latest developments in this growing field, including independent components and support vector machines, not available elsewhere *Supplemented by computer examples selected from applications of interest

Sleep Disorders and Sleep Deprivation

2006-10-13 Institute of Medicine Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very

young and old patients's sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.
