Anemia in Adolescents

To understand what is anemia one should begin with breathing. The oxygen that is inhaled simply doesn't stop in lungs. It circulates though out the body and fuels the brains also. Oxygen travels to all parts of the body though bloodstream and to be precise in the RBCs I.e. red blood cells. Now, these RBCs are produced in the bone marrow of the body and they serve as boats carrying oxygen in the bloodstream. RBCs have something called hemoglobin, a protein which holds oxygen. To make adequate hemoglobin body requires iron in plenty. The iron is supplied by the foods that we take along with other nutrients. When these RBCs are fewer in number than what is needed anemia occurs in the body. There can be 3 primary reasons: RBCs are lost due to some reason, the production of RBCs is slower than what is needed and lastly the body is destroying the RBCs. Different types of anemia are linked to at least one of these causes.

Analysis 8891743607 it27 pdf, Common Oral Health Problems in Adolescents

Adolescents face many oral health problems which may require them to visit a dentist or any other healthcare professional. Irregular teeth growth is a common problem and adolescents with braces are a common sight. Another problem is wisdom teeth extraction or the removal of the third molar. Dental cavities are yet another common problem in adolescents.

Orthodontics is a specialty in dentistry which deals with correction, development and prevention of irregular teeth, jaw and bite. Orthodontics also helps to correct jaw disorders and facial abnormalities. If a general dentist feels abnormalities in the adolescent, he/she will refer the patient to an orthodontist. The American Dental Association suggests that every adolescent above the age of seven should get an orthodontic evaluation done. Problems which require orthodontic treatment are crowded or crooked teeth, extra teeth, missing teeth, under-bite, overbite, jaw joint disorder, and incorrect or misaligned jaw position.

To get braces or any other orthodontic treatments, the appropriate age is ten to fourteen years. But regardless of the age, the same physical and biological process is used in correcting and moving the teeth alignments. Braces are also known as fixed orthodontic appliances. There are three types of braces used to move and reposition the teeth. The first consists of brackets which are made out of plastic or metal. They are either of tooth color or clear and are bonded onto the teeth. The second type is the lingual type of brackets which are attached to the back teeth and cannot be seen while talking. The third type is a band. It is a metal band which covers the teeth and wraps around the last ones.

Story of" 8891743607 it27 pdf~In TCM, practitioners adhere to the concept of Qi, or energy flow, and the meridians in which they travel. They use longer needles and insert them deeper in order to reach the acupuncture points.

Modern science has found little evidence to prove the existence of these energy channels, but this is the technique that has been used effectively for thousands of years.

In medical acupuncture, the practitioners are graduates of western medical schools. Their application of needles

is not based on the traditional acupuncture points, but on anatomic data. These acupuncturists use shorter needles and the insertions are shallower. They also tend to use fewer needles and leave them inserted for shorter periods of time. Adherents to TCM feel this is a watered-down version of the real thing. Nevertheless, many patients have felt relief of symptoms through this method.

Conditions for Puncture Application

There is a broad and extensive list of ailments which can be treated with acupuncture. The conditions run the gamut from asthma to constipation, anxiety to weight loss. Most TCM practitioners believe that any health condition results from an imbalance in Qi flow, therefore amenable to needle therapy. Western acupuncturists tend to have a more limited list of indications, the most common of which is undoubtedly control of pain.

Opportunity 8891743607 it27 pdf

Control of pain is the most well researched of all of the indications for acupuncture. There is a definite beneficial effect for a majority of patients using this method. Migraines, premenstrual syndrome, arthritis, carpal tunnel syndrome, and neuralgias are but a few examples. The theory behind its effectiveness is also medically accepted and well researched, called the gate-control theory of pain. It states that the needles can stimulate nerves so that they block the impulses from pain triggers.

Expected Puncture Session Result

It is important to emphasize that acupuncture is used only on top of existing medical therapy. At no time should a patient discontinue medication or ignore medical instructions in favor of needle puncture. After undergoing a needle puncture regimen, the primary care physician can make an evaluation with regards to decreasing dependence on other therapies.

Solutions 8891743607 it27 pdf;High Blood Pressure in Adolescents

High blood pressure is a condition where the blood pressure is more than normal. It is also known as hypertension. Heart pumps out blood, so that oxygen can reach to different parts of the body via blood. The pressure with which heart pumps blood is known as blood pressure. The blood pressure comprises of two measures, the systolic pressure and diastolic pressure. Systolic pressure is the larger figure and represents the pressure within the artery of the heart, when contractions take place which pump blood to different parts of the body. Diastolic pressure is the pressure within the artery of the heart, when the blood is filling in the heart and it is at rest. Both the pressures are measured in millimeters of mercury or mmHg. High blood pressure is abnormal increase in systolic pressure or diastole pressure.

Blood pressure is measured by putting a blood pressure cuff on the arm and placing a stethoscope on the chest. There can be very little variation in blood pressure depending upon the time, emotional moods, age, gender, weight, height, physical activity, stress and other illness such as heart disease and kidney disease. Children and adolescents become anxious when they visit the doctor. This is also an important factor which affects the blood pressure and the readings taken get tampered because of it. That is the reason why many blood pressure readings are taken in order to determine whether the adolescent has high blood pressure or not. The nurse may even ask the adolescent to calm down while taken the readings. Time gap is given between each reading, so as to give time to the adolescent to calm down. Emotions can also affect the blood pressure reading.

Discovery 8891743607 it27 pdf, There are many premenstrual syndrome symptoms which can be broadly classified as neurologic & vascular symptoms, psychological symptoms, gastrointestinal symptoms, fluid retention, eye problems and respiratory problems. The cause of premenstrual syndrome are fluctuations in the levels of progesterone & estrogen, hypoglycemia, hyperprolactinemia, psychogenic factors, changes in carbohydrate metabolism, excessive aldosterone, progesterone allergy and water retention by kidneys. The good thing is that premenstrual syndrome can be prevented by exercising regularly, eating balanced diet and sleeping adequately.

Dysmenorrhea is feeling intense menstrual pain and cramps. Depending on the severity, dysmenorrhea is stated as primary dysmenorrhea or secondary dysmenorrhea. Primary dysmenorrhea symptoms are felt from the onset of the menstrual periods and are felt life-long. Because of abnormal uterine contractions due to chemical imbalance, severe menstrual cramping is experienced. Secondary dysmenorrhea starts in the later stages. The causes are different for primary and secondary dysmenorrhea. Secondary dysmenorrhea can be blamed on medical conditions such as endometriosis, uterine fibroids, pelvic inflammatory disease, tumors, infections, and abnormal pregnancy. Dysmenorrhea symptoms are lower abdomen cramping & pain, lower back pain, nausea, diarrhea, vomiting, fatigue, fainting, weakness and headaches. Females who are overweight, smoke, and have started to menstruate before turning eleven are at a higher risk of developing dysmenorrhea. Females who drink alcohol during menstrual period experience prolonged pain. After studying the health conditions, age, cause of dysmenorrhea, and extent of condition of the individual, corresponding treatment will be recommended. Regular exercise, abdominal massage, hot bath, vitamin supplements, and dietary modifications can help overcome dysmenorrhea.

What This Ancient Method Does

One of the foremost effects of acupuncture on the body is relaxation. Stress is frequently pinpointed as the main precursor for a host of physical ailments. There are particular points all over the body that direct the flow of harmony and relaxation and when these are enthused, the patient becomes more at ease.

Another positive effect of this alternative therapy is increased pain control. During a session, a patient will usually feel very minimal pain as the thin needles are being inserted gradually. However, the needles are deliberately placed in varying depths, depending on the health requirements of the patient. When the needles reach the right depth, the patient will feel deeper pain, although the entire procedure is not necessarily painful. It is also recommended for relief from chemotherapy fatigue as well as chemotherapy-related nausea. It has also been found to be largely effective for back pains, migraines, menstrual cramps, and as a pain controller for patients after undergoing surgical operations.

Instruction 8891743607 it27 pdf

Heat cramps are the mildest of all heat related injuries and constitute aching muscle cramps and also spasms that occur during intense exercising and also after intense exercising and also sweating in high heat. The symptoms of heat cramps include cramps that are painful in the legs. Flushed and moist skin is also symptoms of heat cramps.

The symptoms could also include mild fever generally below 102 degree Fahrenheit. Teens suffering from heat cramps should move to a cool place and take adequate rest. Remove any excessive clothing and wear or put cool clothing on skin or cool skin using air conditioner or fan. Sports drinks which are cool and which contains sugars and salts can also be taken. Stretching out cramped muscles slowly and steadily also helps reduce heat cramps. On the other hand heat exhaustion is more serious and severe compared to heat cramps and occur due to heavy loss of salt and water from the body. Extreme heat conditions, inadequate fluid intake and excessive sweating results in this conditions. Also, heat exhaustion occurs as a result of inability of the body to maintain the body temperature below the normal which can deteriorate further and also result in a heat stroke which is even worse. The symptoms of heat exhaustion are: muscle cramps, moist skin, pale skin, nausea, fever above 102 degree Fahrenheit, diarrhea, vomiting, fatigue, headache, weakness, anxiety and faint feeling. Teens suffering from heat exhaustion should stay in cool surrounding and take enough rest. Removing excessive clothing, putting on cool clothes and sitting in fan or air conditioning also helps the situation. Intake of cold sports drinks which contains salts and sugars are also advisable. If a teen doesn't show any signs of improvement even after taking all these measures a physician should be consulted immediately.

Challenge 8891743607 it27 pdf-The other virus called cytomegalovirus which also belongs to the family of herpes simplex causes the cells to become enlarged. According to statistics, about eighty percent of adolescents infected with this virus generally don't see any further symptoms. Although EBV has potential to develop infectious mononucleosis in adolescents the virus could make throat and blood cells its home for the lifetime. The virus has the capability to bounce back and reactive from time to time but the consolation is that it would reactivate without symptoms.

The condition usually lasts for 1-2 months. The symptoms may vary from one adolescent to other but may include inflamed lymph glands in areas such as groin, neck and armpits, fever, continuous fatigue, enlarged spleen, sore throat as a result of tonsillitis that can make things difficult to swallow and last but not the least minor liver damage that can lead to short-term jaundice. Some adolescents may also experience symptoms such as abdominal pain, petechial hemorrhage, muscle ache, headache, depression, loss of appetite, skin rash, weakness, dizziness, enlarged prostate, dry cough, swelled genitals and puffy and swollen eyes. Some parents are puzzled by the symptoms of mononucleosis as it may be similar to other medical conditions. It is safe to consult a doctor in such cases.

The viruses are usually transmitted to other people through saliva (the reason why it is also called kissing disease), blood, sharing drinks and sharing utensils. The symptoms usually lasts for 4-6 weeks and do not cross 4 months. The disease is diagnosable but requires a thorough medical history of the adolescent. The diagnosis also involves physical examination of the adolescent and is based on symptoms reported to the physician. The diagnosis is further supported by laboratory test like blood test, antibody test and test to count white blood cells.

The Best 8891743607 it27 pdf-Fifth, medical doctors do not believe in the potential of alternative medicine. This is not true because there are more doctors these days that are open to the idea that there are other ways to help patients aside from conventional medicine. In fact, some of them even recommend an acupuncturist if they know that what they have done is not effective.

Another myth is that every patient will undergo the four needle technique. This is not true and it will only be used when the specialist feels that the energy of the patient is virtually not moving as a last resort.

The seventh myth is that it is better for a medical doctor to perform acupuncture. This is wrong because the training is much different than that taught in medical school. Students who have an acupuncturist license train for 3,000 hours before they are allowed to practice this profession. So between an acupuncturist and a medical doctor, you should go with someone who has learned about this much longer.

Opportunity 8891743607 it27 pdf. How Acupuncture Induces Weight Loss

Most acupuncturists will target the spots behind the ear when it comes to promoting weight loss. When these points behind the ear are stimulated, endorphins are released in large doses. Endorphins are called the feel-good hormones, and these are also often referred to as natural pain and fever relievers. The release of endorphins is what makes you feel better after an increased level of physical activity, as in the case of a good workout. These bodily compounds allow the patient to experience better relaxation, thus considerably alleviating stress. There is a greater possibility of enhanced weight loss when the patient has already achieved emotional wellness. Endorphins are also released whenever the body experiences low levels of bodily pain, thus their moniker as a natural pain reliever.

Periodontal disease can be diagnosed by a dentist or a periodontist after reviewing the complete medical history and also physical examination of the teenager's mouth. Usually x-ray of the teeth is taken to evaluate the disease. Periodontal disease is classified into different types based on what stage the disease is in. The mildest form of gum disease is known as "gingivitis" in which gums become swollen, red and tender resulting in bleeding while daily brushing and flossing. Gingivitis is again divided into 4 groups primarily acute, sub-acute, recurrent and chronic. Acute gingivitis is nothing but sudden appearance which lasts for shorter duration and could be painful. Sub-acute gingivitis is less severe type of gingivitis. Recurrent gingivitis is the one that comes back after treatment. Chronic gingivitis is the one that onsets slowly, lasts longer and is generally painless. A dentist's treatment and proper and continuous care can easily solve the problem of gingivitis but if left untreated could result in periodontitis.

Periodontitis is further classified into mild and moderate to advance. Periodontitis results from untreated gingivitis. In this stage the deterioration of the bone in the vicinity of the tooth becomes evident. The common symptoms include red gums that bleed; mouth tastes bad; loose teeth; tooth loss. Proper treatment is a must to control the disease and prevent further deterioration. Periodontitis which is in moderate to advanced stage shows signs of major loss of tissue and bone loss near the teeth.

There are various treatments available for periodontal disease which is decided by the dentist depending on teenager's age, medical history and health in general. The method of treatment also depends on the extent to which disease has reached. The tolerance of the teenager to certain medicines, therapies and procedures are also taken into consideration. Expectations and opinion of the parents or teenager is also the criteria in deciding the type of treatment. The treatment usually involves plaque removal, medication and in worse cases a surgery.

The imbalance in the Qi may go one way or the other because of Yin and Yang. The person can only be normal if there is harmony between the two which is what acupuncture is trying to achieve. This can only be restored by stimulating these acupuncture points so your Qi can be adjusted, balanced and harmonized.

Apart from using needles, practitioners also use friction, heat, impulses of electromagnetic energy and pressure to stimulate these points in order to balance the movement of energy in the body to reduce one's health.

An example of this is sonopuncture where an ultrasound device that transmits sound waves is applied to these points in the body. Some use a tuning fork and other vibration devices.
