Mummy Portraits of Roman Egypt 2020-08-25 Marie Svoboda This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world. The free online edition of this open-access publication is available at [www.getty.edu/publications/mummyportraits/](http://www.getty.edu/publications/mummyportraits/) and includes zoomable illustrations and graphs. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book.

Nevertheless, despite its first accomplishment, the Northstar engine has been associated with a variety of troubles over the years. One of the most common problems is getting too hot, which can cause substantial destruction to the engine block. An additional issue is oil use, which can result in poor fuel economy and expensive repairs. Many Northstar engine proprietors also mention troubles with head gaskets, which can cause getting too hot problems and lead to costly repairs. Specifically, the Northstar engine versions from 1993 to 2005 have been documented to have leakage problems, cracked seals, harmed head gaskets, extra oil loss, damaged valve cover, faulty water pumps, and carbon buildup. These problems are not major, but the price to repair the problems was significantly larger than most other engines owing to the intricate engineering.
