Eva had always been intrigued by the realm of magic, but she never imagined that she would uncover her own magical heritage. She had spent her childhood in a normal family, living in a unassuming town, devoid of any signs of the supernatural. However, on her sixteenth birthday, her life took an unexpected turn. A intriguing package arrived, sent by her grandmother, who had departed years ago. Within the package lay an ancient leather-bound book, its cover adorned with the inscription, "The Book of Shadows". As Eva opened the book, a surge of power coursed through her veins. She realized that the book held the secrets of her familys magical lineage, and that she was the last descendant of a long line of formidable witches. But she also discovered that she was not alone. There were others like her, individuals who possessed similar abilities, and some of them sought to wield their magic for malevolent purposes. Eva faced a pivotal decision: embrace her destiny as a witch and delve into the world of sorcery, or reject her newfound powers and continue living her life as she had always known it. Regardless of her choice, she knew that her life would forever be altered from that moment forward.

The field of Engineering Economics and Cost Estimation is a crucial aspect of any engineering project. It involves current and upcoming economic factors, making it essential to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers regularly deal with projects whose scale, complexity, and uncertainty call for sophisticated approaches to planning and budgeting^[2]. Various methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates^[1]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Various models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate typically increases as the resources allocated to developing the estimate increase.
