Text Analysis for the Social Sciences
2020-07-24 Carl W. Roberts This book provides descriptions and illustrations of cutting-edge text analysis methods for communication and marketing research; cultural, historical-comparative, and event analysis; curriculum evaluation; psychological diagnosis; language development research; and for any research in which statistical inferences are drawn from samples of texts. Although the book is accessible to readers having no experience with content analysis, the text analysis expert will find substantial new material in its pages. In particular, this collection describes developments in semantic and network text analysis methodologies that heretofore have been accessible only among a smattering of methodology journals. The book's international and cross-disciplinary content illustrates the breadth of quantitative text analysis applications. These applications demonstrate the methods' utility for international research, as well as for practitioners from the fields of sociology, political science, journalism/communication, computer science, marketing, education, and English. This is an "ecumenical" collection that contains applications not only of the most recent semantic and network text analysis methods, but also of the more traditional thematic method of text analysis. In fact, it is originally with this volume that these two "relational" approaches to text analysis are defined and contrasted with more traditional "thematic" text analysis methods. The emphasis here is on application. The book's chapters provide guidance regarding the sorts of inferences that each method affords, and up-to-date descriptions of the human and technological resources required to apply the methods. Its purpose is as a resource for making quantitative text analysis methods more accessible to social science researchers.

Philosophy Reborn Part I: Purpose
Shawn Alli The disingenuous life is not worth living. Do you think that people in Western-European countries live in a democracy? Do you think that science represents objective knowledge? Do you think that the brain is the mind? Do you think that human nature defines you? If you answered yes to any of these questions then you're in for a rude awakening. What is the purpose of life? Can we create a real ethical democracy? What is the mechanism of evolution? Do your genes have intentionality? How does innate knowledge exist? Where do your ideas come from? How do we create a fair justice system? How do we create a better education system? You'll find the answers to all of these questions in Part I.
