Examining Neurocritical Patients

2021-07-15 Eelco F. M. Wijdicks This
indispensable title rethinks the neurologic
examination in a format tailored, modified, and
specialized for neurocritical illness. Generously
illustrated, this book provides a detailed clinical
assessment of the acutely ill neurologic patient.
It explains why certain neurologic signs appear
and provides fundamentals of localization.
Certain situations demand certain structured
examinations. Eventually, all information has to
be integrated logically. Different examination

techniques may be needed. Recognition of deterioration and increased vigilance with important mimickers and confounders are part of our professional fabric. Other necessary skills include predicting a clinical course and outcome, coordinating effective transfers of unstable patients, and communicating expected clinical changes. Neurologists traditionally have carefully considered the examination findings before acting and localized findings before ordering tests; these heuristics must remain. An indispensable title designed for all learners, *Examining Neurocritical Patients* preserves the beauty of a comprehensive clinical neurologic examination and serves as a high-yield master class for every health care professional tasked with clinical assessment of a neurocritically ill patient.

Neurologic Differential Diagnosis

2014-04-17 Alan B. Ettinger "There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"--
