English for Environmental Science in Higher Education Studies

2009 Richard Lee English for Environmental Science in Higher Education Studies The Garnet Education English for Specific Academic Purposes series won the Duke of Edinburgh English Speaking Union English Language Book Award in 2009. English for Environmental Science is a skills-based course designed specifically for students of environmental science who are about to enter English-medium tertiary level studies. It provides carefully graded practice and progressions in the key academic skills that all students need, such as listening to lectures and speaking in seminars. It also equips students with the specialist language they need to participate successfully within an environmental science department. Extensive listening exercises come from environmental science lectures, and all reading texts are taken from the same field of study. There is also a focus throughout on the key environmental science vocabulary that students will need. Listening: how to understand and take effective notes on extended lectures, including how to follow the argument and identify the speaker's point of view. Speaking: how to participate effectively in a variety of realistic situations, from seminars to presentations, including how to develop an argument and use stance markers. Reading: how to understand a wide range of texts, from academic textbooks to Internet articles, including how to analyze complex sentences and identify such things as the writer's stance. Writing: how to produce coherent and well-structured assignments, including such skills as paraphrasing and the use of the appropriate academic phrases. Vocabulary: a wide range of activities to develop students' knowledge and use of key vocabulary, both in the field of environmental science and of academic study in general. Vocabulary and Skills banks: a reference source to provide students with revision of the key words and phrases and skills presented in each unit. Full transcripts of all listening exercises. The Garnet English for Specific Academic Purposes series covers a range of academic subjects. All titles present the same skills and vocabulary points. Teachers can therefore deal with a range of ESAP courses at the same time, knowing that each subject title will focus on the same key skills and follow the same structure. Key Features Systematic approach to developing academic skills through relevant content. Focus on receptive skills (reading and listening) to activate productive skills (writing and speaking) in subject area. Eight-page units combine language and academic skills teaching. Vocabulary and academic skills bank in each unit for reference and revision. Audio CDs for further self-study or homework. Ideal coursework for EAP teachers. Extra resources at www.garnetesap.com

Advanced Calculus

2014-02-26 Lynn Harold Loomis An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but

hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

A Teacher's Guide to Adapted Physical Education

2015-05-15 Martin E. Block A healthy and active lifestyle for all students: That's the promise of physical education, and the goal of this comprehensive textbook. Now in a thoroughly updated fourth edition, this text prepares current and future PE teachers to lead welcoming, inclusive classes where every student participates, makes friends, and learns new skills and values. K - 12 physical educators will get cutting-edge research and guidance on inclusive education, concrete strategies for planning and implementing an adapted PE program, and valuable disability-specific information. An essential resource for preparing both general PE teachers and adapted PE teachers, this text will provide a solid foundation for gym classes that meet every student's needs. This new edition has: 9 chapters on teaching students with specific disabilities, making it an ideal text for APE courses; more student-friendly features including updated tips and reproducible forms for planning and teaching, chapter objectives, additional resources, and more case studies; and more photos and illustrations throughout the book to emphasize key points.

Nightmare that Never Ends

Sam woke up screaming, covered in sweat. He had the same nightmare again, the one where he was chased by a dark figure with a knife. He looked at the clock, it was 3:15 am. He tried to calm himself down, telling himself it was just a dream. But he knew it was more than that. He knew the figure was real, and it was coming for him. He had seen it before, in the news, in the police sketches, in the faces of the victims. It was the serial killer that had been terrorizing the city for months. And Sam was his next target.
