Medical Education for the 21st Century 2022-06-01 Michael S. Firstenberg Medical education has undergone a substantial transformation from the traditional models of the basic classroom, laboratory, and bedside that existed up to the late 20th century. The focus of this text is to review the spectrum of topics that are essential to the training of 21st-century healthcare providers. Modern medical education goes beyond learning physiology, pathophysiology, anatomy, pharmacology, and how they apply to patient care. Contemporary medical education models incorporate multiple dimensions, including digital information management, social media platforms, effective teamwork, emotional and coping intelligence, simulation, as well as advanced tools for teaching both hard and soft skills. Furthermore, this book also evaluates the evolving paradigm of how teachers can teach and how students can learn – and how the system evaluates success.

The MRCGP Study Book 2012-12-06 T. A. I. Bouchier Hayes The Membership examination of the Royal College of General Practitioners has evolved and matured as a seal and a test on completion of vocational training. More than 1000 candidates are taking the examination each year and an increasing majority are trainees who have completed their three year training period. The whole concept and philosophy of the MRCGP has been questioned by critical cynics who refuse to accept general practice as a field of medical practice worthy of recognition as a specialty with its own core of know ledge, skills and expertise and with its own special epidemiology, pathology, clinical presentations and management. These cynical critics are being answered by the growth of the examination and its recognition within the profession as an important and necessary goal to be achieved. The MRCGP exam has arrived, it is here to stay and it will continue to grow and evolve. The exam is no easy obstacle to negotiate. It has a regular failure rate of 1 in 3 and it requires special preparation and study of its examinees if they are to understand its aims, contents and methods. It must not be assumed that even the brightest trainee can walk off the street, enter the examination hall and be confident of passing. It requires a few months of careful and guided preparation.

MCQs in Medicine 2012-12-06 Debra King Academic geriatncians are always looking for an improved objective, quantifiable measure of biological ageing in humans to replace that unphysiological and arbitrary scale 'years survived'. The MCQ may be the nearest we have come yet to achieving this Holy Grail. An individual's facility with the setting and answering of MCQs separates the medical generations more surely than years. I am only grateful I was educated in a less rigorous but perhaps more 'gentlemanly' era. If one appeared before an examiner neatly dressed with clean finger nails and the examination scripts were literate essays written in fountain pen then you were in - or so it seemed. For the past 20 years we have been evolving towards much more objective and rigorous assessment of knowledge and understanding of medicine of both undergraduate and postgraduate students. This process has been exemplified by the evolution of what is now the seemingly ubiquitous MCQ. When initially presented as objective and quantifiable measures of clinical knowledge MCQs were the subject of scorn - how could they assess the art of medicine - the grey areas of clinical decision making? However they very rapidly overcame this antediluvian scepticism and I believe they have had an effect well beyond the limited area of competence measurement. They have induced or at the very least contributed to a shift towards a more rigorous, dare one say more scientific, approach to clinical medicine.
