Multimodal Film Analysis

2013-06-17 John Bateman

This book presents a new basis for the empirical analysis of film.

Starting from an established body of work in film theory, the authors show how a close incorporation of the current state of the art in multimodal theory—including accounts of the syntagmatic and paradigmatic axes of organisation, discourse semantics and advanced ‘layout

structure’—builds a methodology by which concrete details of film sequences drive mechanisms for constructing filmic discourse structures.

The book introduces the necessary background, the open questions raised, and the method by which analysis can proceed step-by-step. Extensive examples are given from a broad range of films. With this new analytic tool set, the reader will approach the study of film organisation with new levels of detail and probe more deeply into the fundamental question of the discipline: just how is it that films reliably communicate

meaning?

Machine Learning For Dummies

detection, optimizing search results, serving real-time ads, credit-scoring, building accurate and sophisticated pricing models—and way, way more. Unlike most machine learning books, the fully updated 2nd Edition of Machine Learning For Dummies doesn't assume you have years of experience using programming languages such as Python (R source is also included in a downloadable form with comments and explanations), but lets you in on the ground floor, covering the entry-level materials that will get you up and running building models you need to perform practical tasks. It takes a look at the underlying—and fascinating—math principles that power machine learning but also shows the
