Revealing Statistical Principles 1999-01-01 James K. Lindsey
Written by a renowned statistician, this book presents the basic ideas behind the statistical methods commonly used in studies of human subjects. It is an ideal guide for

advanced undergraduates who are beginning to do their own research. It presents the basic principles in a non-mathematical way and is accessible to a wide audience with little background in statistics. It collects a large amount of material scattered throughout the literature and will be an invaluable tool for projects in a wide range of disciplines.

Statistical Power Analysis for the Behavioral Sciences 2013-05-13 Jacob Cohen
Statistical Power Analysis is a

nontechnical guide to power analysis in research planning that provides users of applied statistics with the tools they need for more effective analysis. The Second Edition includes: * a chapter covering power analysis in set correlation and multivariate methods; * a chapter considering effect size, psychometric reliability, and the efficacy of "qualifying" dependent variables and; * expanded power and sample size tables for multiple regression/correlation.

This second of the panel's two reports builds on the analysis, conclusions, and recommendations in the first one. This report assesses alternative methods for implementing a new approach that would combine diverse data sources from government and private sector sources, including describing statistical models for combining data from multiple sources; examining statistical and computer science approaches that foster privacy protections; evaluating frameworks for assessing the quality and utility of alternative

Developing Students' Statistical Reasoning 2008-09-08 Joan Garfield Increased attention is being paid to the need for statistically educated citizens:

statistics is now included in the K-12 mathematics curriculum, increasing numbers of students are taking courses in high school, and introductory statistics courses are required in college. However, increasing the amount of instruction is not sufficient to prepare statistically literate citizens. A major change is needed in how statistics is taught. To bring about this change, three dimensions of teacher knowledge need to be addressed: their knowledge of statistical content, their pedagogical knowledge, and their statistical-pedagogical knowledge, i.e., their specific knowledge about how to teach statistics. ‘children have 20 deciduous [baby] teeth’ is an observation about the real world, but scientists would not call it a fact. Some children have fewer deciduous teeth, and some have more. Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood. When they are babies and toddlers, children have less than 20 visible teeth, and as they grow older, children begin to lose their deciduous teeth, which are then replaced by permanent teeth. ‘Children have 20 deciduous [baby] teeth’ is not even a complete scientific statement. For one thing, the statement ‘children have 20

deciduous teeth’ does not tell us what we mean by ‘teeth.’ When we say “teeth,” do we mean only those that can be seen with the unaided eye, or do we also include the hidden, unerupted teeth? An observation such as ‘children have 20 deciduous teeth’ is not a fact, and, by itself, it is not acceptable as a scientific statement until its terms are explained: scientifically, ‘children have 20 deciduous teeth’ must be accompanied by definitions and qualifiers.

regulation—or not—does not obviate the need for effective regulation. Independent, accountable, and transparent regulatory bodies, effective oversight of those bodies, the genuine engagement of citizens in the regulatory process, evidence-based research to fully assess the impact of regulation, and an approach to regulation that is proportionate and targeted to actual risks are essential for effective regulation. Through the lens of the adoption of alternative structures, this book explains how England, Wales, and Australia have, by embracing these essential elements, successfully modernized their

regulatory environments for legal services, and how Canada has taken firm steps down its own path to the same. In contrast, by rejecting these elements, the United States remains paralyzed in an unproductive regulatory environment for legal services. This book provides a blueprint for how the US can take inspiration from its common law sisters to breathe new life into its regulatory environment for legal services. Ultimately, modernization will require more—and better—regulation that is financed publicly through equitable, progressive revenue sources.

Advanced Concepts for Renewable Energy Supply of Data Centres 2022-09-01
Jaume Salom The rapid increase of cloud computing, high performance computing (HPC) and the vast growth in Internet and Social Media use have aroused the interest in energy consumption and the carbon footprint of Data Centres. Data Centres primarily contain electronic equipment used for data processing (servers), data storage (storage equipment), and communications (network equipment). Collectively, this

equipment processes, stores, and transmits digital information and is known as information technology (IT) equipment.

Advanced Concepts for Renewable Energy Supply of Data Centres introduces a number of technical solutions for the supply of power and cooling energy into Data Centres with enhanced utilisation of renewable energy sources in order to achieve low energy Data Centres. Because of the high energy density nature of these unique infrastructures, it is essential to implement energy efficiency measures and reduce consumption before introducing any renewable energy source.

A holistic approach is used with the objective of integrating many technical solutions such as management of the IT (Information Technology) load, efficient electrical supply to the IT systems, Low-Ex air-conditioning systems, interaction with district heating and cooling networks, re-use of heat, free cooling (air, seawater, groundwater), optimal use of heat and cold storage, electrical storage and integration in smart grids. This book is therefore a catalogue of advanced technical concepts that could be integrated into Data Centres portfolio in order to increase the overall efficiency and the share of renewable energies in power

and cooling supply. Based on dynamic energy models implemented in TRNSYS some concepts are deeply evaluated through yearly simulations. The results of the simulation are illustrated with Sankey charts, where the energy flows per year within the subsystems of each concept for a selected scenario are shown, and graphs showing the results of parametric analysis. A set of environmental metrics (as the non-renewable primary energy) and financial metrics (CAPEX and OPEX) as well of energy efficiency metrics like the well-known PUE, are described and used to evaluate the different technical concepts.

EU Internet Law in the Digital Single Market 2021-06-25
Tatiana-Eleni Synodinou With the ongoing evolution of the digital society challenging the boundaries of the law, new questions are arising – and new answers being given – even now, almost three decades on from the digital revolution. Written by a panel of legal specialists and edited by experts on EU Internet law, this book provides an overview of the most recent developments affecting the European Internet legal framework, specifically focusing on four current debates. Firstly, it discusses the changes in online copyright law, especially after the enactment

of the new directive on the single digital market. Secondly, it analyzes the increasing significance of artificial intelligence in our daily life. The book then addresses emerging issues in EU digital law, exploring out of the box approaches in Internet law. It also presents the last cyber-criminality law trends (offenses, international instrument, behaviors), and discusses the evolution of personal data protection. Lastly, it evaluates the degree of consumer and corporate protection in the digital environment, demonstrating that now, more than ever, EU Internet law is based on a combination of

copyright, civil, administrative, criminal, commercial and banking laws.

Community Care in Hong Kong
2014-10-16 Kar-wai TONG
Different global healthcare challenges bring threats to the healthcare system. Like other developed countries, Hong Kong is also focusing on how to manage the ageing population, how to meet the rising public expectations, and how to finance the ever increasing

medical costs. Strengthening community care services may provide a way out for settling these concerns. Written by a team of renowned scholars and leading practitioners, this book aims at evaluating how different parties can assist in building up local community capacity to achieve sustainable health and wellness. The book is divided into three sections. The first section discusses the different roles and practices of specialised community care that contribute to the relative success of the healthcare system in Hong Kong. The second section makes use of various research practices to extrapolate future healthcare

needs and practices in Hong Kong. And the last one addresses the values of health care which underlie the healthcare culture, structure and practice in Hong Kong over time. Apart from pointing out the limitation of the current system, this book will also discuss the future directions of the healthcare system in order to cope with the challenges in a changing society. The Meritocracy Trap

revolutionary new argument
from eminent Yale Law
professor Daniel Markovits

attacking the false promise of meritocracy It is an axiom of American life that advantage should be earned through ability and effort. Even as the country divides itself at every turn, the meritocratic ideal – that social and economic rewards should follow achievement rather than breeding – reigns supreme.

Both Democrats and Republicans insistently repeat meritocratic notions. Meritocracy cuts to the heart of who we are. It sustains the American dream. But what if, both up and down the social ladder, meritocracy is a sham? Today, meritocracy has become exactly what it was conceived to resist: a mechanism for the

concentration and dynastic transmission of wealth and privilege across generations. Upward mobility has become a fantasy, and the embattled middle classes are now more likely to sink into the working poor than to rise into the professional elite. At the same time, meritocracy now ensnares even those who manage to claw their way to the top, requiring rich adults to work with crushing intensity, exploiting their expensive educations in order to extract a return. All this is not the result of deviations or retreats from meritocracy but rather stems directly from meritocracy's successes. This is the radical

argument that Daniel Markovits prosecutes with rare force. Markovits is well placed to expose the sham of meritocracy. Having spent his life at elite universities, he knows from the inside the corrosive system we are trapped within. Markovits also knows that, if we understand that meritocratic inequality produces near-universal harm, we can cure it. When The Meritocracy Trap reveals the inner workings of the meritocratic machine, it also illuminates the first steps outward, towards a new world that might once again afford dignity and prosperity to the American people.

The Northstar engine, manufactured by General Motors (GM) from 1993 until 2011, was a high-quality 90° V engine range and GM's first production V-8 with overhead camshafts¹. Nonetheless, regardless of its first accomplishment, the Northstar engine has been connected with a number of issues over the decades.

One of the most usual troubles is overheating, which can result in substantial harm to the engine block. A different issue is oil use, which can cause bad fuel efficiency and costly repairs. A lot of

Northstar engine proprietors also mention problems with head

gaskets, which can result in getting too hot problems and lead to expensive repairs.

Particularly, the Northstar engine years from 1993 to 2005 have been reported to have leakage issues, broken seals, harmed head gaskets, extra oil loss, broken valve cover, malfunctioning water pumps, and carbon accumulation. These issues are not major, but the cost to resolve the troubles was substantially larger than the majority of other engines because of the complex engineering.

Eva had always been captivated by the realm of magic, but she never imagined that she would uncover her own sorcerous abilities. She had spent her childhood in an ordinary family, living in a quaint

town, devoid of any signs of the supernatural. However, on her sixteenth birthday, her life took an unexpected turn. A enigmatic package arrived, sent by her grandmother, who had departed years ago. Within the package lay an aged leather-bound book, its cover adorned with the inscription, “The Book of Shadows”. As Eva opened the book, a wave of energy coursed through her veins. She realized that the book held the secrets of her familys magical lineage, and that she was the last descendant of a long line of powerful witches. But she also discovered that she was not alone.
