Enterprise Resource Planning and Supply Chain Management 2013-08-23 Karl E. Kurbel This book is about running modern industrial enterprises with the help of information systems. Enterprise resource planning

(ERP) is the core of business information processing. An ERP system is the backbone of most companies' information systems landscape. All major business processes are handled with the help of this system. Supply chain management (SCM) looks beyond the individual company, taking into account that enterprises are increasingly concentrating on their core competencies, leaving other activities to suppliers. With the growing dependency on the partners, effective supply chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market - SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out "in the real world".

SAP Security Configuration and Deployment 2008-11-18 Joey Hirao Throughout the world, high-profile large organizations (aerospace and defense, automotive, banking, chemicals, financial service providers, healthcare, high tech, insurance, oil and gas, pharmaceuticals, retail, telecommunications, and utilities) and governments are using SAP software to process their most mission-critical, highly sensitive data. With more than 100,000 installations, SAP is the world's largest enterprise software company and the world's third largest independent software supplier overall. Despite this widespread use, there have been very few books written on SAP implementation and security, despite a great deal of interest. (There are 220,000 members in an on-line SAP 'community' seeking information, ideas and tools on the IT Toolbox Website alone.) Managing SAP user authentication and authorizations is becoming more complex than ever, as there are more and more SAP products involved that have very different access issues. It's a complex area that requires focused expertise. This book is designed for these network and systems administrator who deal with the complexity of having to make judgmental decisions regarding enormously complicated and technical data in the SAP landscape, as well as pay attention to new compliance rules and security regulations. Most SAP users experience significant challenges when trying to manage and mitigate the risks in existing or new security solutions and usually end up facing repetitive, expensive re-work and perpetuated compliance challenges. This book is designed to help them properly and efficiently manage these challenges on an ongoing basis. It aims to remove the 'Black Box' mystique that surrounds SAP security. \* The most comprehensive coverage of the essentials of SAP security currently available: risk and control management, identity and access management, data protection and privacy, corporate governance, legal and regulatory compliance. \* This book contains information about SAP security that is not available anywhere else to help the reader avoid the "gotchas" that may leave them vulnerable during times of upgrade or other system changes \* Companion Web site provides custom SAP scripts, which readers can download to install, configure and troubleshoot SAP.

EU Regional Trade Agreements 2021-04-07 Maryna Rabinovych This book unveils the potential of utilizing EU Regional Trade Agreements (RTAs) as an instrument of promoting the rule of law to third states. In doing so, the book combines development economics, foreign policy and legal perspectives at three levels of analysis of four sectors to introduce the concept of "EU value-promoting RTAs". The book demonstrates that the EU RTAs bear considerable potential to be strategized as instruments of promoting the rule of law in third states, requiring, however, overcoming strict divides between EU political and economic cooperation, and values and acquis conditionality in its relations with third countries. This book will be of key interest to scholars and students of European Studies, European Union Law, EU external action/foreign policy, EU trade agreements and Development Studies, as well as to NGOs and think tanks that work on European affairs.

A rapid review of effective financing for policy, implementation and partnerships addressing drought risks 2022-05-06 King, C., Salman, M., Tsegai, D., Naqvi, M. The present report was informed by the work of the Intergovernmental Working Group on Drought under the United Nations Convention to Combat Desertification (UNCCD), and its holistic approach with the other Rio Conventions, as well as the international sustainable development and disaster risk reduction communities. The publication builds on a recent review of drought risk mitigation, preparedness and response measures commissioned by FAO with partners in the Integrated Drought Management Programme, alongside a range of other recent global reviews, and the work of the Intergovernmental Working Group of the UNCCD on drought. The report presents an overview of current knowledge and thinking concerning the effectiveness of three distinct layers of financing that set out to address drought risks in different ways. For each of these, results are conceptualized and measured in different ways for disaster risk reduction, adaptation to climate change, and transformative green finance. There is not yet any coherent global system to generate an overview of progress and gaps at the global level, nor to orient public policies and learning processes within the affected countries. This initial review explores how these gaps could be filled. It also takes a first step toward doing so by bringing together insights from the current available systems for targeting and tracking financing to address drought risks through the three layers of actions, target indicators and evidence systems.

The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data archiving using IBM DB2® CommonStore for SAP, and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases.
