From Farm to Firm

2011-01-01 The process of rural-urban transformation presents both opportunities and challenges for development. If managed effectively, it can result in growth that benefits everyone; if managed poorly, it can lead to stark welfare disparities and entire regions cut off from the advantages of agglomeration economies. The importance of rural-urban transition has been confirmed by two consecutive World Development Reports: WDR 2008 Agriculture for Development; and WDR 2009 Reshaping Economic Geography. Focusing on Sub-Saharan Africa and South Asia, this book picks up where the WDRs left off, investigating the influence of country conditions and policies on the pace, pattern, and consequences of rural-urban transition and suggesting strategies to ensure that its benefits results in shared improvements in well-being. The book uncovers vast inequalities, whether between two regions of one country, between rural and urban areas, or within cities themselves. The authors find little evidence to suggest that these inequalities will automatically diminish as countries develop: empirical and qualitative analysis suggests that spatial divides are mainly a function of country conditions, policies and institutions. By implication, policymakers must take active steps to ensure that rural-urban transition results in shared growth. Spatially unbiased provision of health and education services is crucial to ensuring that the benefits of transition are shared by all. But connective infrastructure and targeted interventions also emerge as important considerations, even in countries with severely constrained fiscal and administrative capacity. The authors suggest steps for navigating the tricky political economy of land reforms. And they alert readers to potential spillover effects that mean that policies designed for one space can have unintended consequences on another. Policymakers and development experts, as well as anyone concerned with the impact of rural-urban transition on growth and equity, will find this book a thought-provoking and informative read.

World Development Report 2009

2010 Uwe Deichmann The World Development Report 2009: Reshaping Economic Geography (WDR 2009) was written to inform policy debates about urbanization, lagging areas, and globalization. During almost two years of consultations and dissemination, the report met with broad acceptance among government officials, development professionals, and researchers. Policymakers grappling with difficult spatial development issues have found the report's analytical framework compelling and its policy guidance useful. An exception to this generally favorable reception has been the reaction from a number of economic geographers. In this article, we respond to criticisms about the report's scope, guiding framework, and policy implications that are emphasized in the accompanying articles in this issue of Economic Geography. In conclusion, we agree with economic geographers such as Rodriguez-Pose who call for critical engagement with the report and with the more detailed follow-up studies that use the WDR 2009's framework. This would both improve the quality of spatial policy advice and increase the visibility of economic geographers in international development debates.

Eurasian Cities

2012-09-07 Souleymane Coulibaly This report responds to pressing questions for policymakers in Eurasian cities and national governments. Faced with changing economic circumstances and a reorientation of trade toward Europe and Asia, will Eurasia's cities be able to adjust? Will some cities be granted the flexible regulations and supportive policies necessary for growth? And will some be permitted to shrink and their people assisted in finding prosperity elsewhere in the region? Even as Eurasian cities diverge, they face shared challenges. Policymakers have a key role in assisting spatial restructuring, particularly in addressing imperfect information and coordination failures. They can do so by

rethinking cities, better planning them, better connecting them, greening them and finding new ways to finance these changes. Eurasian cities will also have to find the right balance between markets and institutions to become sustainable. As the World Development Report 2009: Reshaping Economic Geography illustrates, Eurasia (excluding Russia) is a 3D region- a region with low density, long distance, and many divisions. Securing accessibility to leading regional markets such as China, India, and Russia is thus critical. This will require key institutions to be developed to unite the countries, key connective infrastructures to be established between domestic and regional markets, and targeted interventions to be undertaken to compensate countries for short-term losses from this deepened economic integration. Policymakers at the highest levels in these countries should put accessibility at the top of their agendas.

World Development Report

2009 "Places do well when they promote transformations along the dimensions of economic geography: higher densities as cities grow; shorter distances as workers and businesses migrate closer to density; and fewer divisions as nations lower their economic borders and enter world markets to take advantage of scale and trade in specialized products. World Development Report 2009 concludes that the transformations along these three dimensions--density, distance, and division--are essential for development and should be encouraged. The conclusion is controversial. Slum-dwellers now number a billion, but the rush to cities continues. A billion people live in lagging areas of developing nations, remote from globalization's many benefits. And poverty and high mortality persist among the world's "bottom billion," trapped without access to global markets, even as others grow more prosperous and live ever longer lives. Concern for these three intersecting billions often comes with the prescription that growth must be spatially balanced. This report has a different message: economic growth will be unbalanced. To try to spread it out is to discourage it--to fight prosperity, not poverty. But development can still be inclusive, even for people who start their lives distant from dense economic activity. For growth to be rapid and shared, governments must promote economic integration, the pivotal concept, as this report argues, in the policy debates on urbanization, territorial development, and regional integration. Instead, all three debates overemphasize place-based interventions. Reshaping Economic Geography reframes these debates to include all the instruments of integration--spatially blind institutions, spatially connective infrastructure, and spatially targeted interventions. By calibrating the blend of these instruments, today's developers can reshape their economic geography. If they do this well, their growth will still be unbalanced, but their development will be inclusive." -- Book cover.

Reshaping Economic Geography in East Asia

2008-10-15 Yukon Huang This companion volume to the 'World Development Report 2009' comprises twenty papers authored by noted Asian scholars. These studies highlight how, throughout East Asia, spatial considerations have influenced Government policies at the national, regional, and local levels. Key themes include how countries have dealt with: (1) agglomeration economies, urbanization, and regional disparities; (2) improving connectivity with infrastructure investments; and (3) eliminating barriers across and within countries to favor the movement of labor, goods and services. Achievements vary widely across countries: while some succeeded in enhancing competitiveness and improving social outcomes, others are experiencing increasing inequalities and failures to spur growth in disadvantaged areas. The book highlights many examples of how the new economic geography is reshaping development objectives: from initiatives to foster growth via enhanced agglomeration and improved local connectivity to the world economy, to special decentralization programs that channel resources to

lagging regions. This volume will be of great interest to readers working in the areas of economic policy, poverty reduction and urban-rural development strategies, and transport-led infrastructure policy.

Urban Land Markets

2009-10-07 Somik V. Lall As urbanization progresses at a remarkable pace, policy makers and analysts come to understand and agree on key features that will make this process more efficient and inclusive, leading to gains in the welfare of citizens. Drawing on insights from economic geography and two centuries of experience in developed countries, the World Bank's World Development Report 2009: Reshaping Economic Geography emphasizes key aspects that are fundamental to ensuring an efficient rural-urban transformation. Critical among these are land, as the most important resource, and well-functioning land markets. Regardless of the stage of urbanization, flexible and forward-looking institutions that help the efficient functioning of land markets are the bedrock of successful urbanization strategies. In particular, institutional arrangements for allocating land rights and for managing and regulating land use have significant implications for how cities deliver agglomeration economies and improve the welfare of their residents. Property rights, well-functioning land markets, and the management and servicing of land required to accommodate urban expansion and provide trunk infrastructure are all topics that arise as regions progress from incipient urbanization to medium and high density.

World Development Report 2009

2008-11-04 World Bank Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

The chapter begins with a discussion on the properties of groupings and periods, clarifying how the Russian chemist Mendeleev organized elements by their atomic weight in ascending order¹. It then delves into the concept of outer electrons and energy levels of atoms, highlighting the part of these electrons in chemical reactions and changes to atoms and molecules.

The chapter further distinguishes between transition elements and main elements, elaborating on their characteristics and traits. It also explains the notion of ionization energy and its tendencies among groupings and periodic groups on the table of elements¹. The chapter converses about atomic and radii, and how these can be predicted based on an atom's place on the table of elements.

The concept of electronegativity, which calculates an element's tendency to pull a pair of bonding electrons, is another key subject covered in this part¹. The chapter concludes with a discussion on the relationship diagonally, metallic character, and boiling point of elements.

In terms of practice questions, the chapter provides a array of questions for practice and test preparation resources to strengthen the notions learned. These tasks cover a range of themes, from grasping the organization of constituents to investigating the tendencies in the periodic table.
