SAP ABAP Sushil Markandeya 2014-11-17 SAP ABAP (Advanced Business Application Programming) offers a detailed tutorial on the numerous features of the core programming platform, used for development for the entire SAP software suite. SAP ABAP uses hands on business oriented use cases and a valuable dedicated e-resource to demonstrate the underlying advanced concepts of the OO ABAP environment and the SAP UI. SAP ABAP covers the latest version (NetWeaver 7.3 and SAP application programming release 6.0) of the platform for demonstrating the customization and implementation phases of the SAP software implementation. Void of theoretical treatments and preoccupation with language syntax, SAP ABAP is a comprehensive, practical one stop solution, which demonstrates and conveys the language's commands and features through hands on examples. The accompanying e-resource is a take off point to the book. SAP ABAP works in tandem with the accompanying e-resource to create an interactive learning environment where the book provides a brief description and an overview of a specified feature/command, showing and discussing the corresponding code. At the reader's option, the user can utilize the accompanying e-resource, where a step-by-step guide to creating and running the feature's object is available. The presentation of the features is scenario oriented, i.e. most of the features are demonstrated in terms of small business scenarios. The e-resource contains the scenario descriptions, screen shots, detailed screen cams and ABAP program source to enable the reader to create all objects related to the scenario and run/execute them. The underlying concepts of a feature/command are conveyed through execution of these hands-on programs. Further exercises to be performed independently by the reader are also proposed. The demonstration/illustration objects including the programs rely on some of the SAP application tables being populated, for example an IDES system which is now a de facto system for all SAP training related activities.

Transportation Management with SAP TM 9 Jayant Daithankar 2014-08-07 The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors and improved revenue through accurate invoicing. However a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. End-to-end Integration with IBM Sterling B2B Integration and Managed File Transfer solutions James Ballentine 2012-07-21 Across numerous vertical industries, enterprises are challenged to improve processing efficiency as transactions flow from their business communities to their internal systems and vice versa, simplify management and expansion of the external communities, accommodate customer and supplier preferences, govern the flow of information, enforce policy and standards, and protect sensitive information. Throughout this process, external partners must be on-boarded and off-boarded, information must flow across multiple communications infrastructures, and data must be mapped and transformed for consumption across multiple applications. Some transactions require synchronous or real-time processing while others are of a more periodic nature. For some classes of customer or supplier, the enterprise might prefer a locally-managed, on-premise solution. For some types of communities (often small businesses), an as-a-Service

solution might be the best option. Many large enterprises combine the on-premise and as-a-Service approach to serve different categories of business partners (customers or suppliers). This IBM® Redbooks® publication focuses on solutions for end-to-end integration in complex value chains and presents several end-to-end common integration scenarios with IBM Sterling and IBM WebSphere® portfolios. We believe that this publication will be a reference for IT Specialists and IT Architects implementing an integration solution architecture involving IBM Sterling and IBM WebSphere portfolios.

A rapid review of effective financing for policy, implementation and partnerships addressing drought risks King, C., Salman, M., Tsegai, D., Naqvi, M. 2022-05-06

The present report was informed by the work of the Intergovernmental Working Group on Drought under the United Nations Convention to Combat Desertification (UNCCD), and its holistic approach with the other Rio Conventions, as well as the international sustainable development and disaster risk reduction communities. The publication builds on a recent review of drought risk mitigation, preparedness and response measures commissioned by FAO with partners in the Integrated Drought Management Programme, alongside a range of other recent global reviews, and the work of the Intergovernmental Working Group of the UNCCD on drought. The report presents an overview of current knowledge and thinking concerning the effectiveness of three distinct layers of financing that set out to address drought risks in different ways. For each of these, results are conceptualized and measured in different ways for disaster risk reduction, adaptation to climate change, and transformative green finance. There is not yet any coherent global system to generate an overview of progress and gaps at the global level, nor to orient public policies and learning processes within the affected countries. This initial review explores how these gaps could be filled. It also takes a first step toward doing so by bringing together insights from the current available systems for targeting and tracking financing to address drought risks through the three layers of actions, target indicators and evidence systems.
