How Tobacco Smoke Causes Disease 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Pocket Book of Hospital Care for Children World Health Organization 2013 The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Managem. **Step-Up to Medicine** Steven S. Agabegi 2012-08-23 "The questions serve as a self-assessment tool, allowing students to think through clinical scenarios without answer choices influencing their thought process. Most questions end in "what are the appropriate next steps in managing this patient?" Imagine yourself as the clinician taking care of these patients: What test(s), if any, would you order next?"--Provided by publisher.

Small Animal Cardiopulmonary Medicine Wendy Ware 2012-03-15 Dr. Wendy Ware, author of the highly acclaimed **Cardiovascular Disease in Small Animal Medicine**, has brought together specialist contributors to produce this important addition to the Self-Assessment Color Review series. The book presents a wide variety of cases involving cardiothoracic diseases, mainly focusing on the causes of respiratory distress and other clinical signs that relate to lower respiratory, cardiac or other intrathoracic disorders. Many cases in the book involve common diseases and focus on diagnosis and management, but some more unusual and challenging cases are also featured. The 218 cases—comprising questions, illustrations and detailed explanatory answers—appear randomly to reflect real life practice, and are designed not only to test the ability of the reader but also to educate and inform. This book is of value to all veterinary practitioners with an interest in canine and feline cardiothoracic diseases who wish to reinforce their clinical skills, to those veterinarians and veterinary nurses/technicians preparing for higher qualifications and to veterinary students as an aid to learning and revision.

Self-Assessment Color Review of Renal Medicine Timothy H. J. Goodship 1997 This highly illustrated review provides coverage of the range of issues likely to confront practitioners in clinical nephrology and renal transplantation. The questions are designed to educate as well as test: the 220 case presentations depict all aspects of the kidney specialty and are aimed at everyone involved in the care of nephrology patients. The questions are pitched at different levels of expertise and are followed by detailed explanatory answers. Cases appear in random order - just as they would in real life - and, by solving the clinical puzzle, the reader is led towards differential diagnoses, treatment plans and prognoses. The contributors are all renal specialists and they cover the latest developments in this vital field of medicine.

Self-Assessment Color Review of Ornamental Fish Greg Lewbart 1998 The keeping of ornamental fish is the most widespread animal related hobby in the world. Many textbooks and most of the related literature focus on diseases of fish bred for human consumption, especially aquaculture species. This review provides 265 clinical cases, covers all of the important medical and surgical conditions found in ornamental fish and includes material on aquatic invertebrates. The illustrated cases appear randomly by topic and are targeted at different levels of expertise. In addition, questions on fish anatomy, physiology, husbandry and identification are included to ensure that the book is both educational and comprehensive. A team of internationally respected authors have written the questions and detailed explanatory answers to make the text practical, informative and, at the same time, easy to read. Veterinary practitioners, professional aquarists, hobbyists and students will find this a valuable addition to their education and clinical training.
