TORUS 3 - Toward an Open Resource Using Services Dominique Laffly 2020-04-09 This book, presented in three volumes, examines environmental disciplines in relation to major players in contemporary science: Big Data, artificial intelligence and cloud computing. Today, there is a real sense of urgency regarding the evolution of computer technology, the ever-increasing volume of data, threats to our climate and the sustainable development of our planet. As such, we need to reduce technology just as much as we need to bridge the global socio-economic gap between the North and South; between universal free access to data (open data) and free software (open source). In this book, we pay particular attention to certain environmental subjects, in order to enrich our understanding of cloud computing. These subjects are: erosion; urban air pollution and atmospheric pollution in Southeast Asia; melting permafrost (causing the accelerated release of soil organic carbon in the atmosphere); alert

systems of environmental hazards (such as forest fires, prospective modeling of socio-spatial practices and land use); and web fountains of geographical data. Finally, this book asks the question: in order to find a pattern in the data, how do we move from a traditional computing model-based world to pure mathematical research? After thorough examination of this topic, we conclude that this goal is both transdisciplinary and achievable.

Make Your Mind Up Bethany Mota 2017-06-15 When Bethany first propped

her camera on a stack of books and pressed record in 2009, she didn't realise her life was about to change—forever. After uploading her first video to YouTube at just thirteen years old, Bethany quickly became one of the Internet's go-to beauty, style, and lifestyle vlogger. Since then, she has filmed countless room tours and tutorials, travelled the world, experimented with hundreds of DIYs, designed her own clothing line, gone on an international tour, competed on *Dancing with the Stars*, and created health, beauty, and wellness content for multiple platforms. But before Bethany found her #MotaFam online, life wasn't looking so great: After being intensely bullied in school, the already shy Bethany retreated further into her shell, suffering from crippling anxiety and a lack of self-confidence she just couldn't shake. From growing up on a dairy farm in small-town Los Banos, California, to figuring out how to overcome anxiety and find her voice, to finally breaking out of her shell and learning to forge her own positive path, *Make Your Mind Up* is more than just a heartwarming memoir or lifestyle guide—this is a portrait of Bethany's life, exactly how she lives it.

Weather variability and extreme shocks in Africa: Are female or male farmers more affected? Nico, Gianluigi 2022-04-12 Agriculture in Africa has been traditionally seen as an important employment provider, supporting agriculture-based livelihoods of the vast majority of the African population, (James, 2014; World Bank, 2011) and absorbing the largest share of the employed population. Data suggest that almost 224 million people aged 15 and above are directly engaged in agriculture in Africa (ILO, 2021), corresponding to nearly half of the total employed population in the continent and absorbing $\frac{1}{4}$ of global agricultural employment.

Fundamentals of Immunology O.G. Bier 2012-12-06 This textbook of basic and clinical immunology has been written primarily for medical and biology students who are receiving their first introduction to this fascinating field. Although we have presumed some knowledge of basic biology (particularly physiology and biochemistry), our primary intent has not been to cover in depth the latest research findings. Rather, we have sought to lay a firm foundation for subsequent reading in the laboratory and clinical sciences: internal medicine, pediatrics, microbiology, serology, physiology, cell biology, and genetics. Hence the first part of the text presents the various components of basic immunology, while the second shows how these elements interact under both normal physiologic and pathologic conditions. To facilitate comprehension of the relationship between basic and clinical immunology, we have introduced cross-references throughout the book. A glossary of important terms has also been included. Selected references are provided with each chapter to guide the student to additional information on topics of special interest. Throughout the book we have attempted to convey to new students of immunology some of the excitement which the subject has long held for us. If we have succeeded, the task of writing will have been worthwhile. **Krause and Mahan's Food and the Nutrition Care Process, 16e, E-Book** Janice L Raymond 2022-07-30 NEW Infectious Diseases chapter is written by a new author with specific expertise in infectious disease. Fundamentals of Immunology Otto G. Bier 2011-12-06
The good acceptance of this textbook is an indication that it has served its purpose. The present edition has been prepared in order to cover the main progress achieved in the five years that have elapsed since the first edition. The structure of the book remains

essentially the same but a considerable amount of new material has been introduced, particularly in certain areas such as the genetics of immunoglobulins and T cell receptor, the regulation of the immune response, hypersensitivity reactions, and cellular immunology. Today, immunology is essential for biologists in general and in particular for physicians, veterinarians, and pathologists. The great progress and diversification that has taken place in the last few years is due to its enormous value both for the understanding of theoretical biology and for the practical resolution of biochemical, genetic, pathological, and biological problems. Greatly contributing to this progress have been relatively sophisticated techniques, such as immunofluorescence, radioimmune assay, transmission electron microscopy, scanning electron microscopy, isoelectric focusing, quantitative cytofluorimetry, affinity chromatography, and techniques that allow separation of the different lymphocyte subpopulations. A potentially fabulous field was recently opened with the development of techniques for obtaining monoclonal antibodies by fusion of immunologically active lymphocytes with myeloma cells. These hybrid cells produce large amounts of monoclonal antibodies or other lymphocyte factors. The establishment of this hybridoma technology, that is already routine in most laboratories, is being used in the resolution of general biology problems, particularly in the study of the various cell surface molecules.

Honoring God in Red or Blue Dr. Amy E. Black 2012-05-25 Politics isn't a four-letter word. Everyone's been at that dinner party. The conversation takes a political turn. The arguments start, the atmosphere grows tense, and all that remains is a hopeless stalemate and an awkward silence. Makes you wonder . . . is thoughtful and productive dialogue about politics even possible? In *Honoring God in the Red or Blue*, Dr. Amy Black addresses the debaters as well as those intimidated or annoyed by the debaters; political junkies and the contented uninformed. She explains the purposes and limitations of our system and helps readers create realistic expectations for government. While God's truth is perfect, human application of it is not, a reality that shouldn't deter us from engaging in debate and staying informed. Rather, it should challenge us to raise our standards for how we speak about the issues—and those in office. It's time to approach political divides with an extra measure of grace. Success begins with seeking God's honor first and foremost, regardless of where we fall on the political spectrum. Don't limit yourself to chatting about the weather.

Routledge Handbook on Tourism in the Middle East and North Africa Dallen J. Timothy 2018-12-07 The Routledge Handbook on Tourism in the Middle East and North Africa examines the importance of tourism as a historical, economic, social, environmental, religious and political force in the Middle East and North Africa (MENA). It highlights the ecological and resource challenges related to water, desert environments, climate change and oil. It provides an in-depth analysis of the geopolitical conditions that have long determined the patterns of tourism demand and supply throughout the region and how these play out in the everyday lives of residents and destinations as they attempt to grow tourism or ignore it entirely. While cultural heritage remains the primary tourism asset for the region as a whole, many new types of tourism are emerging, especially in the Arabian Gulf region, where hyper-development is closely associated with the increasingly

prominent role of luxury real estate and shopping, retail, medical tourism, cruises and transit tourism. The growing phenomenon of an expatriate workforce, and how its segregation from the citizenry creates a dual socio-economic system in several countries, is unmatched by other regions of the world. Many indigenous people of MENA keep themselves apart from other dominant groups in the region, although these social boundaries are becoming increasingly blurred as tourism, being one socio-economic force for change, has inspired many nomadic peoples to settle into towns and villages and rely more on tourists for their livelihoods. All of these issues and more shape the foundations of this book. This Handbook is the first of its kind to examine tourism from a broad regional and inclusive perspective, surveying a broad range of social, cultural, heritage, ecological and political matters in a single volume. With a wide range of contributors, many of whom are natives of the Middle East and North Africa, this Handbook is a vital resource for students and scholars interested in Tourism, Middle East Studies and Geography.

The Oxford Handbook of Environmental Criminology Gerben J.N. Bruinsma 2018-02-08 The study of how the environment, local geography, and physical locations influence crime has a long history that stretches across many research traditions. These include the neighborhood effects approach developed in the 1920s, the criminology of place, and a newer approach that attends to the perception of crime in communities. Aided by new technologies and improved data-reporting in recent decades, research in environmental criminology has developed rapidly within each of these approaches. Yet research in the subfield remains

fragmented and competing theories are rarely examined together. The Oxford Handbook of Environmental Criminology takes a unique approach and synthesizes the contributions of existing methods to better integrate the subfield as a whole. Gerben J.N. Bruinsma and Shane D. Johnson have assembled a cast of top scholars to provide an in-depth source for understanding how and why physical setting can influence the emergence of crime, affect the environment, and impact individual or group behavior. The contributors address how changes in the environment, global connectivity, and technology provide more criminal opportunities and new ways of committing old crimes. They also explore how crimes committed in countries with distinct cultural practices like China and West Africa might lead to different spatial patterns of crime. This is a state-of-the-art compendium on environmental criminology that reflects the diverse research and theory developed across the western world.

Designing Effective Distance and Blended Learning Environments in K-12
Driscoll III, Thomas F. 2021-11-12 It has quickly become apparent in the past year that online learning is not only an asset, but it is critical to the continued education of youth during times of crisis. However, districts and schools across the nation are in need of guidance and practical, research-backed approaches to distance and hybrid learning. The current COVID-19 crisis has demonstrated that effective learning in K-12 is possible, but many districts struggled and continue to struggle in achieving that reality. There is also the growing consensus that even if things “return to normal,” distance and blended learning strategies should continue to be employed in many ways across

the K-12 environment. Designing Effective Distance and Blended Learning Environments in K-12 provides key insights into the ways that school districts and educators from across the world have effectively designed and implemented distance and blended learning approaches to enable and enhance student learning. The diverse collection of authors from various demographics and roles in school systems will benefit readers across a wide spectrum of school community stakeholders. There will also be an emphasis on how research and theory is put into practice, along with an honest discussion of what strategies and actions were successful as well as those that were less so. This book is essential for professionals and researchers working in the field of K-12 education, particularly superintendents, curriculum developers, professional learning designers, school principals, instructional technology specialists, and teachers, as well as administrators, researchers, academicians, and students interested in the effective practices being used in blended learning approaches.

Gáldy 2021-06-21 This collection of essays highlights the enduring significance of provenance and its implications for historians and art historians, as well as students and researchers engaged in museum studies. It also offers an opportunity to demonstrate its relevance to other fields of expertise, such as conservation, visual culture studies, aesthetics, authentication and connoisseurship versus technology as a means of establishing attributions and detecting forgeries. Provenance is still of vital importance to jurisdiction, whether it concerns property law or ownership. It also

of Palestinian statehood and identity, and wider Middle Eastern politics. Nevertheless, Palestine, like much of the Middle East as a whole, remains extremely underrepresented in tourism literature. This title aims to fill this void by being the first book dedicated to exploring the significance of tourism in relationship to Palestine. The book examines the role of tourism in Palestine at three main levels. First, it provides an overview of destination management and marketing issues for the tourism industry in Palestine and addresses not only the visitor markets and the economic significance of tourism but also the realities of the difficulties of destination management, marketing and promotion of the Palestinian state. Second, it provides a series of chapters and case studies that interrogate not only the various forms of tourism in Palestine but also its economic, social, environmental and spiritual importance. This section also conveys a dimension to tourism in Palestine that is not usually appreciated in the Western mainstream media. The third section indicates the way in which tourism in Palestine highlights broader questions and debates in tourism studies and the way in which travel in the region is framed in wider discourses. A significant dimension of the book is the attention it gives to the different voices of stakeholders in Palestinian tourism at varying levels of scale. This timely volume will offer the reader significant insight into the challenges and issues of tourism in this area now and in the future. It will benefit those interested in tourism, Middle East studies, politics, economics, development studies and geography.

and everything in between; to original DIYs, recipes, and style hacks; to the incredible story of a girl next door turned Internet sensation, *Make Your Mind Up* is the ultimate guide to rocking your look and ruling your world—from inspirational YouTuber, designer, entrepreneur, and digital influencer, Bethany Mota. When Bethany first propped her camera on a stack of books and pressed record on her family's handheld camera in 2009, she didn't realize her life was about to change—forever. After uploading her first video to YouTube at just thirteen years old, Bethany quickly became one of the Internet's go-to beauty, style, and lifestyle vloggers. Since then, she has filmed countless room tours and tutorials, traveled the world, experimented with hundreds of DIYs, designed her own clothing line, gone on an international tour, competed on *Dancing with the Stars*, and created health, beauty, and wellness content for multiple platforms. But before Bethany found her #MotaFam online, life wasn't looking so great: After being intensely bullied in school, the already shy Bethany retreated further into her shell, suffering from crippling anxiety and a lack of self-confidence she just couldn't shake. From growing up on a dairy farm in small-town Los Banos, California, to figuring out how to overcome anxiety and find her voice, to finally breaking out of her shell and learning to forge her own positive path, *Make Your Mind Up* is more than just a heartwarming memoir or lifestyle guide—this is a portrait of Bethany's life, exactly how she lives it.

beyond the state-of-the-art in structural dynamics and earthquake engineering. Most of the chapters are based on the keynote lectures at the International Conference in Earthquake Engineering and Structural Dynamics (ICESD), held in Reykjavik, Iceland, on June 12-14, 2017. The conference is being organised in memory of late Professor Ragnar Sigbjörnsson, who was an influential teacher and one of the leading researchers in the fields of structural mechanics, random fields, engineering seismology and earthquake engineering. Professor Sigbjörnsson had a close research collaboration with the Norwegian Institute of Science and Technology (NTNU), where his research was mainly focused in dynamics of marine and offshore structures. His research in Iceland was mainly focused on engineering seismology and earthquake engineering. The keynote-lecture based chapters are contributed by leading experts in these fields of research and showcase not only the historical perspective but also the most recent developments as well as a glimpse into the future. These chapters showcase a synergy of the fields of structural dynamics, engineering seismology, and earthquake engineering. In addition, some chapters in the book are based on works carried out under the leadership and initiative of Professor Sigbjörnsson and showcase his contribution to the understanding of seismic hazard and risk in Iceland. As such, the book is useful for both researchers and practicing engineers who are interested in recent research advances in structural dynamics and earthquake engineering, and in particular to those interested in seismic hazard and risk in Iceland.

Rethinking Social Action through Music Geoffrey Baker 2021-04-12 How

can we better understand the past, present and future of Social Action through Music (SATM)? This groundbreaking book examines the development of the Red de Escuelas de Música de Medellín (the Network of Music Schools of Medellín), a network of 27 schools founded in Colombia's second city in 1996 as a response to its reputation as the most dangerous city on Earth. Inspired by El Sistema, the foundational Venezuelan music education program, the Red is nonetheless markedly different: its history is one of multiple reinventions and a continual search to improve its educational offering and better realise its social goals. Its internal reflections and attempts at transformation shed valuable light on the past, present, and future of SATM. Based on a year of intensive fieldwork in Colombia and written by Geoffrey Baker, the author of *El Sistema: Orchestrating Venezuela's Youth* (2014), this important volume offers fresh insights on SATM and its evolution both in scholarship and in practice. It will be of interest to a very varied readership: employees and leaders of SATM programs; music educators; funders and policy-makers; and students and scholars of SATM, music education, ethnomusicology, and other related fields.
