Financial Services in the Twenty-First Century John JA Burke 2021-07-05 This textbook covers financial systems and services, particularly focusing on present systems and future developments. Broken into three parts, Part One establishes the public institutional framework in which financial services are conducted, defines financial service systems, critically examines the link between finance, wealth and income inequality, and economic growth, challenges conventional paradigms about the *raison d'être* of financial institutions and markets, and considers the loss of US financial hegemony to emerging regional entities [BRICS]. Part Two focuses on financial innovation by explaining the impact of the following technologies: cryptography, FinTech, distributed ledger technology, and artificial intelligence. Part Three assesses to what extent financial innovation has disrupted legacy banking and the delivery of financial services, identifies the main obstacles to reconstructing the whole financial system based upon "first principles thinking": Nation State regulation and incumbent interests of multi-national companies, and provides a cursory description of how the pandemic of COVID-19 may establish a "new normal" for the financial services industry. Combining rigorous detail alongside exercises and PowerPoint slides for each chapter, this textbook helps finance students understand the wide breadth of financial systems and speculates the forthcoming developments in the industry. The Capital Asset Pricing Model in the 21st Century Haim Levy 2011-10-30 The Capital Asset Pricing Model (CAPM) and the mean-variance (M-V) rule, which are based on classic expected utility theory, have been heavily criticized theoretically and empirically. The advent of behavioral economics, prospect theory and other psychology-minded approaches in finance challenges the rational investor model from which CAPM and M-V derive. Haim Levy argues that the tension between the classic financial models and behavioral economics approaches is more apparent than real. This book aims to relax the tension between the two paradigms. Specifically, Professor Levy shows that although behavioral economics contradicts aspects of expected utility theory, CAPM and M-V are intact in both expected utility theory and cumulative prospect theory frameworks. There is furthermore no evidence to reject CAPM empirically when ex-ante parameters are employed. Professionals may thus comfortably teach and use CAPM and behavioral economics or cumulative prospect theory as coexisting paradigms. Investments Zvi Bodie 2005 Offers a practical and theoretical coverage of investments market. This book places emphasis on asset allocation, and offers a treatment of futures, options, and other derivative security markets.
