Beaver Protection, Management, and Utilization in Europe and North America Peter E. Busher 2012-12-06 By the end of the 19th century both beaver species had been extirpated from large portions of their native ranges. The global decline in beaver populations was the direct result of exploitation by humans. Now, at the end of the 20th century, protection, management, and reintroduction programs, coupled with a decline in the demand for beaver fur and other products, have allowed beaver populations to increase dramatically. Since beavers actively modify their local environment their activities can conflict with human land use. Because of this, the beaver, once considered a unique and exotic component of wet lands, is now often considered a nuisance species. The history, as well as the current status, of beaver populations in Europe and North America provide insight into how conservation programs work, and into how humans and wildlife interact. The initial plenary lecture of the Euro-American Mammal Congress (July, 1998) was presented by Dr. Michael L. Rosenzweig, a professor at the University of Arizona. Dr. Rosenzweig discussed how humans have used and continue to use natural resources, including wildlife and wildland. He provided evidence indicating that the current model of reservation conservation could not provide a long-term solution to the human-wild life/wildland conflict. Dr. Rosenzweig emphasized that what is required is a move away from purely exploitive activities (I would call this exploitive ecology) and the development of a reconciliation ecology with wildlife.

The Biopolitics of Gender Jemima Repo 2016 This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

Principles of Food Packaging Stanley Sacharow 1980 Red meats, poultry and eggs, milk and dairy products fish and shellfish, fruits and vegetables, fats and oils, food flavoring, beverages, sugar, chocolate and confections, cereal grains, snack foods. Statutory and religious regulations.

Principles of Modified-Atmosphere and Sous Vide Product Packaging Jeffrey M. Farber 2018-12-19 This is the first in-depth presentation in book form of both modified atmosphere and sous vide food preservation and packaging technologies and applications. The use of these technologies with all applicable food product categories is examined. The authors are specialists in these preservation/packaging methods from North America and Europe. All significant aspects are examined including processes and materials, applications, microbiological control, and regulations and guidelines. Topics of special interest include use of hurdles, HACCP, gas absorbents and generators, and time-temperature indicators. Extensive practical reference data is economically presented in tables.

Missing Karin Alvtengen 2010-08-31 Can murder and mercy go hand in hand? In The Grand Hotel, a homeless woman charms a businessman into paying for dinner and a room. When his dead body is discovered the following morning she becomes the prime suspect. When a second person is killed in similar circumstances, Sybilla, having

left her comfortable middle-class upbringing for the anonymity of the streets, becomes the most wanted person in Sweden . . . Missing is a gripping, multi-faceted thriller; more than a murder-hunt, it is also something more profound : an individual's journey to self-awareness and hope.

The Longing in Me Sheila Walsh 2016-04-05 Do your desires have you going around in circles? You may be looking for fulfillment in all the wrong places. You vowed you'd never repeat the same mistakes—yet you find yourself right where you started. What is it that keeps drawing you back into the same old traps? The fact is, your longings are built from the blueprint of your needs: for protection, for love, for God. And those needs aren't going anywhere. Sheila speaks candidly about the trials in her life, including the heartache of her first marriage, and intertwines her story with the biblical saga of King David. As both Sheila's and David's stories make clear, some cravings are misguided, but they all stem from the same hunger—and they will haunt you until that hunger gets satisfied properly. If you keep reaching out to the wrong people at the wrong times in your own life, The Longing in Me will help you understand that your cravings are not the problem. It's where they lead you that makes all the difference.

Research in Novel Materials Rafiqul Islam 2013 The most important first premise in science is that mass can be neither created nor destroyed. It is also becoming clear that natural laws dictate that mass be connected to energy. In effect, mass-balance provides the only governing equation that is both necessary and sufficient. Clearly, this compels a paradigm shift in scientific study. If a process is engineered in violation of natural principles of material production, the balance will be irreversibly disturbed, and the outcome of such a violated process both unpredictable and harmful to future generations. The post-Renaissance mode of technology development is based on an analogous corollary principle of mass production. This is an approach characterised by an excessive focus on quantity to the detriment of establishing or upholding definitive criteria as to quality. In order to make mass-produced materials acceptable to the consumer, non-scientific means have been used to cover up true properties of both materials and energy. As a result, today technologies ranging from photovoltaic electricity to genetically-modified crop production to mass-produced pharmaceutical products are considered to be in harmony with nature. On the other hand, herbal medicine is dismissed as quackery and direct solar energy usage as pseudo-science. Nobel Laureates, such as the prize-winning chemist Robert Curl, have not shied from pronouncing this development mode a technological disaster.

A Review of Sodium Monofluoroacetate (compound 1080) Stephen P. Atzert 1972 Since the Second World War sodium monofluoroacetate, or sodium fluoroacetate (Compound 1080), has been the subject of wide research in the United States and elsewhere. Based on this research, it has been approved for animal damage control work by several nations. In the United States sodium monofluoroacetate has been a tool used by the Bureau of Sport Fisheries and Wildlife to control coyote and rodent damage, as well as a tool used by private pest control operators to control commensal rodents. Despite 25 years of worldwide research and practical experience, the use of Compound 1080 is still embroiled in controversy. The purpose of this monograph is to summarize current information on sodium monofluoroacetate, to review use patterns, and to provide a base for further studies.

Snack Foods Processing Edmund W. Lusas 2001-06-05 Providing a clear, comprehensive overview of the industry, *Snack Foods Processing* is the definitive handbook on developing, preparing, and processing shelf-stable savory snack foods. Contributors from leading companies and academic institutions provide practical information and guidance based on years of industry experience. Collectively, they review the principles and critical specifics of processing savory snacks, starting from raw materials selection and care, through types of equipment used and its proper operation, to product seasoning, and packaging. The book covers every major product type, including potato and corn chips, alkali-cooked corn tortilla chips, pretzels, popcorn, extruder puffed and baked/fried products, half-products, meat snacks, and rice-based snacks. It also discusses international snack foods, including those of China, India, and Japan. It details post shaping and drying operations, covering seasonings, flavorings application, product protection and packaging materials, and filling and cartoning equipment. Whether you are new to the field or you are a pro facing broader responsibilities, *Snack Foods Processing* provides valuable information gained through first-hand experience. It presents a clear introduction to the snack foods industry and its terminology and explains the technical interrelationships between the many materials and processes used in making the finished snack food.

New entrants into the field will be able to confidently communicate with suppliers and associates. Managers and quality control personnel will gain a better idea of where to start in solving problems when they arise.

A Handbook on Biotelemetry and Radio Tracking Charles J. Amlaner 2013-10-02 *A Handbook on Biotelemetry and Radio Tracking* presents the proceedings of an International Conference on Telemetry and Radio Tracking in Biology and Medicine, held in The University of Oxford, Oxford, U.K. on March 20–22, 1979. This book illustrates the advances connected with every aspect of biotelemetry and radio tracking. Organized into five parts encompassing 101 chapters, this compilation of papers begins with an overview of the method that allows assessment or control of biological parameters from animals, subjects, and patients with comparatively little disturbance and restraint. This text then examines radio telemetry as a system for telemetry or communications over great distances. Other chapters consider better transmitter design and construction of radio tracking. This book discusses as well telemetric measurements of hemodynamic response to driving in coronary patients. The final chapter deals with the study of the coastal movements of Atlantic salmon tagged with ultrasonic transmitters. This book is a valuable resource for biological researchers and ecologists.

Evolutionary Relationships among Rodents W. Patrick Lockett 2013-11-11 The order Rodentia is the most abundant and successful group of mammals, and it has been a focal point of attention for comparative and evolutionary biologists for many years. In addition, rodents are the most commonly used experimental mammals for biomedical research, and they have played a central role in investigations of the genetic and molecular mechanisms of speciation in mammals. During recent decades, a tremendous amount of new data from various aspects of the biology of living and fossil rodents has been accumulated by specialists from different disciplines, ranging from molecular biology to paleontology. Paradoxically, our understanding of the possible evolutionary relationships among different rodent families, as well as the possible affinities of rodents with other eutherian mammals, has not kept pace with this information "explosion." This abundance of new biological data has not been incorporated into a broad synthesis of rodent phylogeny, in part because of the difficulty for any single student of rodent evolution to evaluate the phylogenetic significance of new findings from such diverse disciplines as paleontology, embryology, comparative anatomy, molecular biology, and cytogenetics. The origin and subsequent radiation of the order Rodentia were based primarily on the acquisition of a key character complex: specializations of the incisors, cheek teeth, and associated musculature of the jaws and skull for gnawing and chewing.
