**Mobility, shock, and firepower: The Emergence of the U.S. Army's Armor Branch, 1917-1945**

Robert S. Cameron 2008

From the Preface: The following pages provide a narrative analysis of the U.S. Army's development of armored organizations and their related doctrine, materiel, and training activities in the period 1917-1945. This period marked the emergence of clear principles of armored warfare that became the underpinning of the Armor Branch, influencing armored developments long after World War II ended. A unique style of mounted maneuver combat emerged that reflected a mix of tradition and innovation. In the process, American military culture changed, particularly through the adoption of combined-arms principles. Conversely, political actions, budgetary considerations, and senior leadership decisions

also shaped the course of armor development. The emergence of an American armored force involved more than simply tank development. It included the creation of an armored division structure steeped in combined-arms principles, organizational flexibility, and revolutionary command and control processes. Parallel developments included the establishment of specialized units to provide antitank, reconnaissance, and infantry support capabilities. Several Army branches played a role in determining the precise path of armored development, and one of them—the Cavalry—became a casualty as a result.

### **Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles**

National Research Council 2015-09-28  
The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are

being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? **Facing Asia** Daniel Oakman 2010-10-01 'No nation can escape its geography', warned Percy Spender, Australia's Minister for External Affairs, in 1950. With the immediate turmoil of World War II over, communism and decolonisation had ended any possibility that Asia could continue to be ignored by Australia. In the early 1950s, Australia embarked on its most ambitious attempt to engage with Asia: the Colombo Plan. This book examines the public and private agendas behind Australia's foreign aid diplomacy and reveals the strategic, political and cultural aims that drove the Colombo Plan. It examines the legacy of WWII, how foreign aid was seen as crucial to achieving regional

Above all this is the question of how Australia sought to project itself into the region, and how Asia was introduced into the Australian consciousness. In answering these questions, this book tells the story of how an insular society, deeply scarred by the turbulence of war, chose to face its regional future.

Perhaps this is in part because requirements management tool vendors have persuaded management that a glitzy tool will solve their requirements engineering problems. Of course, the tools only make it possible for engineers who understand requirements engineering to do a better job. This book goes a long way towards building a foundational set of skills in requirements engineering, so that today's powerful tools can be used sensibly. Of particular value is a recognition of the place software requirements have within the system context, and of ways for dealing with that sensitive connection. This is an important book. **Sports and Riches** Kurt Weichert 2013-04 Back in the Game This sequel to SportsFan Chronicles proves that the more things change the more they stay the same. Best friends Kurt and Brian hit it big when they won the largest lottery jackpot in the country-half of it, anyway. They decided to combine their winnings with the other winner: Frank, their hated former boss. They reluctantly joined forces with their enemy in order to fulfill their lifelong dream of owning an NFL team. The good news is they're now filthy rich. The bad news is they're still hundreds of millions of dollars short of the amount needed to purchase a team. Making huge business deals is their only option, and these guys are willing to invest in almost anything as long as it makes them more money, including reality shows,

technology startups, and hilarious inventions. Their large windfall magnifies everything in their lives, especially the fun...at least when Victor isn't getting them beat up by jealous football players or when Bernie isn't screwing up their exercise video. Chuck's constant pranks and Alice (annoying best friend of Kurt's longtime love, Darci) keep Kurt on his toes. Even the reviled Frank and his underachieving nephew, Meathead, seem to be fitting in nicely. Things suddenly change when someone in their inner circle betrays them and compromises their chances of buying the football team. The depth of the betrayal is stunning, but they take no time to analyze it. Instead they remap their path, try to overcome the obstacles, and move on in their own inimitable style of staunch friendship, ambition, and humor. The unexpected is no stranger to Kurt, but even he finds himself at a loss to explain the surprising turn of events and the shocking, too strange to be believed twist in the end.

Company This book contains information necessary to the proper handling and care of your Ford car. Read it carefully—particularly the instructions on lubrication, the cooling system, care of battery, etc., which are absolutely necessary to economical and satisfactory operation. Your car is a splendid piece of machinery. If properly cared for, it will give you years of satisfactory service at little cost. When repairs are needed, we recommend having the

work done by an authorized Ford dealer. They are provided with special service equipment. Furthermore they are interested, more than any one else, in your personal satisfaction with the car.
