**Managing Climate Risk in the U.S. Financial System** Leonardo Martinez-Diaz 2020-09-09 This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious emerging risks to the U.S. financial system, and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data and tools to better monitor, analyze, and quantify climate risks. It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible, open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive—it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations, in the form of new financial products, services, and technologies, can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition.

**Structured Finance and Insurance** Christopher L. Culp 2011-09-13 Praise for Structured Finance & Insurance "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separated disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, Journal of Applied Corporate Finance (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends silos to reach the Enterprise Mountaintop. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc.
