Crises of Social Transformation in India S. R. Ahlawat 2015 The majority of papers were presented at 37th and 38th All India Sociological Conferences at New Delhi and Udaipur.

Evolution of Information Processing Systems Klaus Haefner 2012-12-06 An interdisciplinary team of scientists is presenting a new paradigm: all existing structures on earth are the consequence of information processing. Since these structures have been evolved over the last five billion years, information processing and its systems have an evolution.This is under consideration in the book. Starting with a basic paper which summarizes the essential hypotheses about the evolution of informaon processing systems, sixteen international scientists have tried to verify or falsify these hypotheses. This has been done at the physical, the chemical, the genetic, the neural, the social, the societal and the socio-technical level. Thus, the reader gets an insight into the recent status of research on the evolution of information processing systems. The papers are the result of an interdisciplinary project in which scientists of the classical disciplines have been invited to collaborate. Their inputs have been intensively discussed in a workshop. The book is the output of the workshop. The first goal of the books to give the reader an insight into basic principles about the evolution of information processing systems. This, however, leads directly to a very old and essential question: who is controlling the world, "matter" or an "immaterial intelligence"? Several authors of the papers are arguing that there is a basic concept of information processing in nature. This is the crucial process, which, however, needs a material basis. The reader has a chance to understand this paradigm as an approach which is valid for all levels of inorganic, organic and societal structures. This provocative concept is open to debate.

A Doll's House Henrik Ibsen 2022-05-28 This is a three-act play written by Norwegian playwright Henrik Ibsen. The play is significant for the way it deals with the fate of a married woman, who at the time in Norway lacked reasonable opportunities for self-fulfillment in a male-dominated world, despite the fact that Ibsen denied it was his intent to write a feminist play. It aroused a great sensation at the time, and caused a "storm of outraged controversy" that went beyond the theatre to the world newspapers and society.

The text covers conceptual issues regarding definitions of drug use, misuse, abuse, and dependence. Importantly, the text addresses a variety of theoretical bases currently applied to the development of prevention and cessation programs, specific program content from evidence-based programs, and program processes and modalities. Information regarding etiology, prevention, and cessation is neatly delineated into (a) neurobiological, (b) cognitive, (c) micro-social, and (d) macro-social/physical environmental units. The book is ideally suited as a primary source for students and professionals in chemical dependence programs, clinical and health psychology, public health, preventive medicine, nursing, sociology, and social work, among other fields, on the nature, causes, prevention, and cessation of the abuse of legal and illegal drugs.

How Musical is Man? John Blacking 1973 This important study in ethnomusicology is an attempt by the author -- a musician who has become a social anthropologist -- to compare his experiences of music-making in different cultures. He is here presenting new information resulting from his research into African music, especially among the Venda. Venda music, he discovered is in its way no less complex in structure than European music. Literacy and the invention of nation may generate extended musical structures, but they express differences of degree, and not the difference in kind that is implied by the distinction between 'art' and 'folk' music. Many, if not all, of music's essential processes may be found in the constitution of the human body and in patterns of interaction of human bodies in society. Thus all music is structurally, as well as functionally, 'folk' music in the sense that music cannot be transmitted of have meaning without associations between people. If John Blacking's guess about the biological and social origins of music is correct, or even only partly correct, it would generate new ideas about the nature of musicality, the role of music in education and its general role in societies which (like the Venda in the context of their traditional economy) will have more leisure time as automation increases.
