History Lessons Dana Lindaman 2006-07-04 A “fascinating” look at what students in Russia, France, Iran, and other nations are taught about America (The New York Times Book Review). This “timely and important” book (History News Network) gives us a glimpse into classrooms across the globe, where opinions about the United States are first formed. History Lessons includes selections from textbooks and teaching materials used in Russia, France, Iran, Saudi Arabia, Cuba, Canada, and others, covering such events as the American Revolution, the Cuban Missile Crisis, the Iran hostage crisis, and the Korean War—providing some alternative viewpoints on the history of the United States from the time of the Viking explorers to the post-Cold War era. By juxtaposing starkly contrasting versions of the historical events we take for granted, History Lessons affords us a sometimes hilarious, often sobering look at what the world thinks about America’s past. “A brilliant idea.” –Foreign Affairs

Global Voices Joseph O'Beirne Milner 1994 This book presents essays that reflect the dialogue and the spirit of conversation of the 1990 International Federation for the Teaching of English (IFTE) Conference in Auckland, New Zealand. The book begins with some of the impressions of the IFTE conference held by the classroom teachers, school administrators, writers, and scholars who attended it. Language diversity in the classroom is the focus of several essays in the second part of the book. Each essay in the second part of the book is followed by a response. The pairing of essays continues in the third section of the book, where issues such as who controls curricula and who sets the standards for curricula are addressed. The third part of the book also discusses national curriculum movements in New Zealand and the United Kingdom; English as a Second Language pedagogies; and international underpinnings of the whole language movement. The initial essay in each set is a response to a paper presented at the conference; the second is the original presenter's reply to the author of the first essay. The fourth part of the book presents essays about the history and future of IFTE conferences, looking forward especially to the 1995 conference to be held in New York City. (RS)

*Research on Mathematics Textbooks and Teachers'*

*Resources* Lianghuo Fan 2018-02-13 This book focuses on issues related to mathematics teaching and learning resources, including mathematics textbooks, teacher guides, student learning and assessment materials, and online resources. The book highlights various theoretical and methodological approaches used to study teaching and learning resources, and addresses the areas of resources, teachers, and students at an international

level. As for the resources, the book examines the role textbooks and other curricular or learning resources play in mathematics teaching, learning, and assessment. It asks questions such as: Could we consider different types of textbooks and roles they play in teaching and learning? How does the digitalization of information and communication affect these roles? What are defining features of e-textbooks, and how could we characterize the differences between the traditional textbooks and e-textbooks? As for the teachers, the book discusses the relationships between teachers' individual and collective resources, and the way in which we could model such relationships. Specific questions addressed are: What is the role of teachers in developing textbooks and other teaching and learning materials? What are the relationships between resource designers and users? What are the consequences of these changing roles and relationships for the teaching of mathematics, and for teacher knowledge and professional development? As for the students, the book explores how students, as well as their teachers, interact through resources. It raises and addresses questions such as: What are the effects of modern ICT (particularly internet) on students' use and the design of resources? How do changing patterns of use and design affect student behaviour, learning, and relationships to the subject of mathematics?
